James,

You really don't have a clue about all of this! At first I thought
that you knew, but were feigning ignorance...you know, just to throw
us all off the trail. Now, I'm beginning to wonder. Maybe it is the
"real" Jimmie!

Bill

2810. Re: First Personal Here is Jim... QSL?

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-16 00:00:00 UTC
From: abeito <spamicide@osu.edu>
Message-ID: <01bca9ed$bbb250a0$38a40f81@OUPPP.ouknor.edu>
Source record: 191754

Well, to hell with accepted practices. Jim should have found him a friend to start his own accepted practices. I hear incorrect radio procedure all the time from the very people I hear correcting others. I have a friend that I talk to on 2 meter, and just for the fun of it we'll use 10 codes. Its the young people that can change things.

While I'm on the subject, here are a few more things that the people, that should know better, do:

Why in the hell would you tell somebody to "give me a *landline*" ? I know that voice operation on HF is referred to as *phone*. But why not just say "call me on *the* phone". The majority of people on 2 meter dont even have HF privileges, so the chances of confusion are low. The same goes with all the Q codes I hear, they just make things confusing for new guys like Jim and myself.

Autopatch abuse drives me crazy. I heard one guy use the autopatch to call his mother, who was said to be ill and just out of the hospital. The first thing that surprised me was that this guy didn't live with his mother (he's 43). The second thing was that this guy was calling from HOME ! I know this cause I heard his dogs barking in the background. Now, if it was an emergency.... no problem. But this was no emergency. The last thing I want to hear is this guy's mother's illnesses on the radio....you can imagine what a 70 year old lady might say about her various illnesses.

There are a lot of people around here with high power radios and beam antennas on top of 50 foot towers. And they insist on using the repeater to talk to they buds 5 miles away. Nobody wants to talk simplex, its about as popular as cw around here. But I have figured this one out. I've known a guy long before he "earned" his license. He calls his wife a slut, a bitch, a stupid whore, and many other things that are to bold for some readers. And he does this all in front of me ! My friend told me to come over to this guy's house and hear it for myself (I went to school with this scum bag's son, thats how I know him). The insults are even directed to his children (the girls are called whores and sluts too). Well, once this guy got on the radio, things were different. He talked like he was the worlds greatest dad. Shit. It makes me sick. He gets on the radio everyday and tries to promote his social standing. I feel sorry for those people that talk to this guy, if they only knew. I often wonder about the people I hear on the repeaters....are they acting this way because this is who they are ? Or are they blowin smoke ?
The repeaters are the medium that the propaganda is delivered. These people want everybody to listen to how great they are. Thats why they dont go simplex; smaller audiences. This slug is even going to try to get a doctor's note so he doesn't have to learn to copy code to get his general,

just like many that I know have.

Sad.

POSTED FOR*** DAVE- KA1DPW*** SEND E-MAIL TO: ka1dpw@erols.com

Ham Radio/Test Equipment:
Palomar Engineers PFS-1 Field Strength Meter. Covers 1.8 to 150 MHz. Tuned input circuit removed out-of-band signals.Has a 20 dB gain amp to further improve sensitivity. Gain measured with a panel meter to better than .2 dB. Has a 30 dB attenuator with 5 dB steps. With instructions. Never used. $130

Ham Radio: A&A Engineering 30 meter QRP CW rig. 5 Watt, single conversion receiver, AGC, VFO tuning, CW sidetone with built-in speaker and S-meter. Built, calibrated, and tested by owner of A&A for QST review. W/manual. Never used. $100

Test Equipment: Beckman CAPT-6: Wide range capacitor and component tester. Measures capacitance from the pico farad range to 20,000 microfarads. Measures resistance to 20 megohms, transistor hFE and leakage, plus tests batteries under load conditions, diodes, LEDs. Has leads and manual, never used. $50

Scanner/Test Equipment: Optoelectronics Scout. Measures and record up to 400 unique frequencies to memory along with up to 255 hits per frequency. Recorded frequencies can be viewed on LCD display or downloaded to a computer(has the needed software on a 3.5" disk). Display is backlit and has a bargraph S-meter. Beeps when aquiring a new frequency or hits. Also has silent pager-like vibrate mode. Can directly reaction-tune various scanners to its captured frequency. With belt-clip, ni-cad pack, charger, VHF & UHF antennas, and manual. Used a few times. $300 SEND E-MAIL - ka1dpw@erols.com

You could change to BAND FrEE and have RX from 72-540 and 590-999 and
TX 118-232 and 308-506, or to some other Country Band.

The Serial Nummber does not affect the Resistor Mod, it works on every FT50.

I don't know what you expect of a Rubber Duck Antenna.
One of the ways to improve performance of a Rubber Duck Antenna
is to use a Tiger Tail. This is a 20" piece of wire that attaches
to the base (ground) of the antenna. Gives the other half of a
dipole. To test just cut a piece of insulated stranded wire about
22" long, strip of about 2" of insulation and wrap it on to the
base of your antenna connector (ground) and let it hang down.

If you want to buy one I think Antenna's West still sells them.

The funny thing is that if any of us ever talk to obrein (sp ?) on the radio, we would probably be all chummy. So its good that we can get all of the name calling done on a different medium. Forget that obrein guy, have you guys heard those igit heads on 3.853.5 MHz ? Those are the real losers.

Find & unhook your doorbell transformer-often located in the attic- and
see if the noise stops. It is probably wired into the housewiring system
instead of being plugged in, tho either is possible. I've seen this type
noise generated from a bell transformer that was arcing internally,
afffecting everything up through the TV channel freqs. They are
typically cheaply built and I replaced mine with a communications
quality 24vac transformer from Radio Shack.

I am considering purchasing two Marine handhelds that have all
frequencies and their output is 1 or 5 watts.
Considering all the limitations of handhelds, what kind of range
should I expect to have for full quieting?
Are there any solid negatives about these handhelds that buyers
should be aware of?

Interesting question.

My guess.. is that Vibroplex proclaimed it when they designed the "bug" semi-automatic key. They had to choose one side of the key to automatically send dits, and the side they chose ended up becoming the standard dit side for automatic keys.

But that's just a wild guess.

GMRS requires a license. FRS is the new Family Radio Service, that
requires no license. Fourteen channels with .5 watt power maximum. About
a mile range.

Truth hurts don't it?

(A little clue: JJ's not an air traffic controller--he's a retired
air traffic controller.) So, you're safe. But you're going to have
to worry....JJ was an air traffic control instructor for 4 1/2 years
and many controllers--USAF or otherwise, who have gone on to develop
their own techniques--were at one time were under his direct
influence. Many of those got out of the military and are now working
for the FAA.

Are your flying days truly over? If not, let me know next time you
file a flight plan. I'd like to stay clear of any areas you plan to
fly over.

It's not often you run into a pilot who obtained his license from a
box of Cracker Jacks. Nice to meet you.

I began my Ham Hobby as a victim of the action I call" CUFFING THE PUPPY". This is the act of a bully and the best thing we could do is surround all new operators with as much comfortable guidance as possible and rebuff the meanies. I know there are some who disagree with confrontations on the air so use the twisted pair or e-mail or the downtown sidewalk block to send the message that we are going to be civilized and kind. Aren't we? Perhaps the telephone can also be the place for constructive critisisms to avoid public embarassments of new hams.

Source record: 191822
Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.scanner

I used to live near Chicago back in the late '80s and used a pro-2004 with a grove scanner beam and pre-4 preamp. I was able to hear these air phones in the analog AM mod back then between 849-851Mhz (ground) and 894-896Mhz (air). Since I believe I lived not to far from a ground station I was able to hear 1 uplink station as well as the downlinks but on two discrete frequencies. At times when I heard the downlink only I assumed that the aircraft was probably linked to a ground station too far away for me to hear. My best reception direction was generally aimed 'south' to hear the most activity.

Today, living 150 miles away, I cannot hear any ground station. I can hear occasional rare AM calls but very few and not as strong using the same scanner beam and pre-amp but with a IC-R7100 in AM mode. I have noticed that their are many more 'digital' signals where back in the '80s they were all analog AM. I do not know what mode these digital signals use. The various manufacturers of these phones probably use different transmission modes hence the confusion of which mode used.

I suspect that the old analog AM phones are going the way of the dinosaur in very short order. The few AM signals you hear today are probably (speculating) from older aircraft and/or craft flying a foreign flag.

This was precisely the point I was making when I posted my initial rant on this thread. My conjecture that Tandy's lawyer droids would go after ham radio suppliers was hypothetical. You are saying that it already happened years ago. Did the "Ham Shack" enlist the support of the ARRL legal staff or the local ham population or did they silently knuckle under?

You can shop at K-Mart, Biz Mart, Auto Mart, Pets Mart or Wall Mart - and these companies are not sueing each other over the use of the word "Mart". Tandy, however, has a lock on the word "Shack" and is now using its legal muscle to bully people around on the Internet now - protecting its "good" name. This is really a hoot!

If the Tandy lawyers are really concerned about the consequences of their name (or part of it) showing up in search engines, they should check out this page for a clue as to their true vulnerability out here in cyberspace:

The polite, well-mannered "radio cop" was doing "Jim" a big favor.
He was attempting to prevent "Jim" from looking like a blithering
idiot, a'la CB, on the amateur radio airwaves! If "Jim" took offense,
and went back to 11-meters, so be it! Amateur Radio is not CB,
and hams should not tolerate CB-like on-the-behavior for even
one minute! I'm all in favor of playing "radio cop," after all, the
amateur radio service is supposed to be "self-policing," isn't it?

Hans...I'll sacrifice as many "Jims" as it takes to keep the amateur
radio service from degenerating into a CB-like "personal" radio
service. This "first personal" nonsense is just that...nonsense! It
doesn't belong in a radio service whose participants are supposed
to be trained communicators. I can imagine what kind of image
this gives to those we're trying to impress with our "public service"
capability.

BTW, Hans...next time you introduce yourself to a stranger, in person, say "My first personal is Hans." Let me know what happens!

I use an FT-50RD also (sn 18) and the resistor mod allows for complete
general coverage recieve, 76-540 and 590-999. I have performed both
the solder mod for extended TX and the resistor mod. The resistor mod
puts it in a debug mode with certain keys which allow you to change
power outs (you can trick one up to 8 or 9 watts), change hysteresis
levels, s-meter values, etc., along with the band plan.
1. Remove R1 above solder pad 1
2. Set VFO A to 144.0 and VFO B to 443.0
3. Turn radio off
4. Hold down know, ptt, and lamp.
5. The first menu should be band, works just like any other menu.
Press button and rotate until it says free.
6. Until you know what they are and have proper test equipment to
calibrate them, I would not mess with other settings.
7. Cycle power.
8. You are done!

Also, if you get to adjusting the other settings, there is one for VHF
and one for UHF. Just put 443.0 in VFO A and put it into debug mode. A
u will appear beside the settings, meaning UHF.

I hope it helps!

This would be a good time to remind everyone that there is an email list devoted to Heath gear. To subscribe, send an email to:

listserv@listserv.tempe.gov

and only write:

subscribe heath Your Name

and you'll be hooked up. That site also carries a Boatanchors e-list (free!); use the above command line with "boatanchors" in place of "heath".

Good Advice, first I would throw the main braker for the house.
This will tell you if the noise is coming from any thing in the
house. If you still have the noise, it has to be in the meter or
wires or the transformer or whatever.

I always set my transceiver so that when you push PTT at outside hand
band, you transmit within the ham band. Just set your tranceiver so
that it transmits to the packet freqs or something.

>There are a number of older synthesized 2 meter HT's on the market for

>Phoenix, Arizona

I was interested in wide band RX/TX transceiver, but no more. I get
too much intermods in big city. Radio Shack's HTX-202 and 404 are
some good choices. They don't get interfered much... well...
cheap HT ? you can buy a ADI's AT-600 dualband at $269 US or so at
present.

A long tradition of ham operators is to help one another out, and
> that includes helping new operators who get on the air with poor
operating
> practices.

Where does it say that using the term "personal" is a poor operating practice ? Poor operating practice is interrupting a conversation in progress....or saying your call sign so damn fast that it is indiscernible to the new guys that have not yet learned to decipher you call. 10-4 ?

DIVISIONAL NEWS

REMEMBRANCE DAY WEEKEND

Good luck to everyone competing in this weekend's Remembrance Day Contest. The R D opening address follows this broadcast.
Please note that there will be no broadcast tomorrow morning. The regular Sunday evening broadcast will go to air at its usual time of 7.30pm.

Your Support of the Remembrance Day Contest is invited, even if you only end up making a few contacts. Its your operation and submitted log which will help VK2. We need your score!

You'll find the contest rules in the July issue of Amateur Radio magazine, also on Internet; just go to the VK2 Division home page at http://marconi.mpce.mq.edu.au/wia/ and follow the links in the "What's New" section.

AFFILIATED CLUBS NET.

With this weekend being the R D Contest the scheduled Affiliated Club Net [will not be/ was not] held, advises Ken VK2AGW. The next net will be the first Sunday In September -. the 7th - at 9 am on 3595 kHz.
You are still invited to come up Sunday morning and make a few contacts in the R D, so the log that you submit will help VK2.

FUTURE OF PACKET IN THE WEST OF NEW SOUTH WALES

All paketeers in the West of New South Wales are invited to a meeting tomorrow [Sunday 17th] at 1 pm at the Aero Club Parkes Airport to discuss and try and find a solution to the packet isolation including the wormhole closures. Ken Westerman VK2AGW has been informed by VK2BXQ there is a good supply of tea coffee and biscuits.

--Ken Westerman VK2AGW Affiliated clubs officer.

STOP PRESS!

A limited number of copies of Fred Swainston's "Radio Theory Handbook for Radio Amateurs" now available at the VK2 Divisional Bookshop. Cost is $45.00 per copy plus $6.00 postage & handling. --Submitted by Eric Fossey VK2EFY, Divisional Secretary & Bookshop Officer

DURAL COMMITTEE MEETING.

Dural Committee Members are reminded that the next committee meeting will be held next Sunday the 24th August at VK2WI after the morning broadcast.

--73 Tim VK2ZTM - for the Dural Committee.

CHANGE OF ADDRESS

No, the VK2 Division is not leaving Parramatta. The address in question is the Division's Internet email address. From now on, please address email correspondence to us at this address: vk2wi@ozemail.com.au

The current Dialix address will be phased out of use over the next few weeks. If you didn't catch the address, don't worry - just go to the VK2 Divisional home page, and you'll find the details at bottom of the page.

FURTHER YOUR ELECTRONIC EDUCATION.

The 9th Australian International Electrical and Electronic Industries Exhibition will be held at Darling Harbour during the week 26th to 29th August 1997

WICEN NEWS

Contrary to previous reports, WICEN was indeed activated for Thredbo. WICEN assisted the Police with their Disaster Victim Registration (DVR) procedures, in both the registration and public enquiry aspects. Tasks included computer entry of information from Thredbo, the taking of calls from the public regarding the victims, training of Police officers for these
tasks, supervision of the DVR Coordination Centre, and liaison between the VRA operators and the Police Service. Some assistance was also provided to the State Emergency Operations Centre. WICEN personnel were involved day and night for the first three days of the operation.

Last week's AGM was a popular affair, with 26 people in attendance. The meeting was preceded by an RCOs' meeting, at which Kevin Dawson VK2CKD and Malcolm Alexander VK2YVA were elected as Deputy State Co-ordinators 1 and 3 respectively. Following this, the AGM began in earnest, and the following positions were filled; President: Dave Horsfall VK2KFU; Snr Vice President: Tony Farrow VK2TJF; Secretary: Frank Weber VK2XVJ; Treasurer: John Buxton VK2GJB; Committee: Ron Hanks VK2UR, Malcolm Alexander VK2YVA, Alan Whitmore VK2YYJ, and

Richard Main VK2TPS; we offer our condolences to all involved. In the meantime, vacancies exist for Jnr Vice President and a Committee member. The GRN demonstration (friend or foe?) attracted much interest, as did Simon Trotter's talk on RAYNET (the UK equivalent of WICEN) and the VK1 situation. Finally, the door-prizes were drawn from a hat by Simon Trotter; First Prize, a $50 gift voucher upon Dick Smith Electronics, was won by Frank Weber VK2XVJ; Second Prize, a $20 gift voucher upon Dick Smith Electronics, was won by Richard Main VK2TPS; and Third Prize, a year's membership of WICEN, was won by Pauline Jones VK2GTB, whom we understand has decided to delay her retirement by a year. WICEN (NSW) Inc thanks Chris Ayres and Dick Smith Electronics for the generous donation of these vouchers.

Time is running out for taking part in the Shahzada Horse Endurance Ride, over the week of the 25-29th; your scribe has already booked a week off work for this, so what is everybody else doing? Although this is a tough event, any help would be appreciated, even for just one day. It takes part in the St Albans area, north-west of Sydney, and you have to be self-sufficient. It is ideal for anyone wishing to improve their WICEN skills, not to mention team and perhaps management skills, and non-WICEN people are also welcome. Even if you can help out for just one day, please contact the organiser, Ian Rosser VK2XB, on the Heathcote or Gosford repeaters, at home on (043) 74-1077 after hours, or mobile on 018-295-545.

If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is another summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the August issues of the various magazines, and again your scribe plaintively asks whether anyone else is prepared to take over this august job.

"Electronics Australia" unashamedly celebrates 75 years of publication, during which some other magazines went belly-up; although we don't normally do product reviews, a "clockwork radio" is surely worthy of attention; electronic pest-deterrents (of the plug-in variety) are once again questioned regarding their EMF emissions and their health and safety aspects: those wishing to monitor intruders in the shack can build a cheap monitor camera; the 4016/4066 analog switches, the heart of Dural here, are examined; a simple switchable power supply is assembled; a white LED (yes, you heard that correctly) finds a practical use in a strobe; and test equipment as old as radio itself is examined.

"Silicon Chip" build a 500 watt AM modulator; those into alternative medicine can stimulate their nervous systems; stepper motors can be pulsed from a parallel port; the finer points of R/C transmitter

programming are examined; and the secrets of aligning old receivers are revealed.

"Amateur Radio" asks for more equipment reviewers; intermodulation performance is measured; a simple peak-reading watt-meter is built; an X-beam antenna for 2m is assembled; constant-K filters are constructed; and the fundamentals of repeaters are discussed. Listeners with Web access can access the contents of "AR" from the "unofficial" Federal page; the full path is: "http://marconi.mpce.mq.edu.au/wia/federal/armag.html"; we don't know about other magazines.

"Radio and Communications" tells how to work the MIR space station; why the 2m band is so popular is discussed; the importance of lightning protection is examined in detail; there is a plea for the use of correct phonetics; and the Web pages of the emergency services -- especially WICEN NSW -- are investigated.

Finally, although not a local magazine we are told that "New Scientist" features digital television services, using frequency allocations at 28 GHz

in the US, 42 GHz in Europe, and how they can thus be adversely affected by the poor weather conditions. Satellite TV enthusiasts will already know how downlink signals can be messed up by a little rain.

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2ZTB

SPACE NEWS

US astronaut Mike Foale, KB5UAC, continues to be sporadically active on Amateur Radio from the Russian Mir space station. Foale has been using 145.985 MHz while over the US, and the 145.200/800 MHz split pair elsewhere.

In a recent packet bulletin, Foale also said he expects his new Mir 24 crewmates, Anatoli Solovev and Pavel ''Pasha'' Vinogradov, to be active on the radio ''once they are settled in.''

The new crew members arrived August 7 aboard the ailing Mir to replace the Mir 23 contingent of Vasily Tsibliev and Alexander Lazutkin, who returned to Earth August 14. Foale will remain aboard Mir until September. ''We are conducting handover activities now,'' Foale related in his message. He said the team will prepare for a so-called ''internal space walk'' on August 20 to relocate power cables from the damaged Spektr module to Mir's Core module. A decision on whether Foale would get a chance to participate in a later space walk in September was pending this week. The Mir crew has been attempting to clear up vexing problems with its onboard oxygen-generation system.

''Lots to do here,'' Foale said in his hurried posting. ''I try to monitor each
day.'' Foale has been experiencing problems with his TNC, which has

been losing messages. A new TNC was to have been delivered along with the Mir 24 crew members, but that did not happen.

NASA, meanwhile, reports that Foale's scheduled replacement, astronaut Dave Wolf, KC5VPF, is undergoing intensive training in Russia in preparation for swapping places with Foale in late September.

-- ARRL Space Bulletin 28, dated 14 August, 1997

Side note: regarding the troubled oxygen-generation system, the Australian reported this week that filters in the system were clogged with alkaline salts, which the innovative Russians cleared with a solution of salicylic acid (better known as aspirin, as in "take two and call me in the

Mirning..." :-}
===

Back on the ground, listeners might be interested to know that the film "Contact", starring Jodie Foster, which opens in Sydney on 4th September, has some Amateur Radio content at the start, with radio-astronomy as its main theme. The callsign used by Foster, W9GFZ, was the callsign of radio astronomy pioneer Grote Reber, who now lives in Tasmania.

DX REPORT

SVALBARD - JW/SM7NAS will be active from August 29 to September 1, from the QTH of JW5E. Expect operation on 20, 15 and 10 meters, plus the newer bands if possible.

NEPAL - 9N1BV has been active on 14015 and 14180 kHz between 1200 and 1500z.

MAYOTTE - Look for FH/DF2SS, on CW on 18077, 10109, 3505 and 1840 kHz. FH/IK4NQW/P will be active from August 21 to September 2 as well.

IRAQ - YI1US was heard working stateside on 14254 kHz just after 2000z.

LIBYA - The OE1XIC 5A28 DXpedition is expected to be active from August 31 to September 7.

CEUTA - EA5RD and EA5ND, will be active September 6 and 7, signing EA9/home call. Look for them on 80 through 10 meters using CW, SSB and RTTY.

GUADELOUPE - FG/EA3CB will be active from Les Saintes until August 17. Check 40 through 10 meters on CW, SSB and RTTY, including the newer bands.

ST. PIERRE and MIQUELON - FP5AA is planning a RTTY operation August 14 through 18. He will be active in the SARTG RTTY Contest August 16 and 17.

PITCAIRN ISLAND - VR6TC has been active on 14188 kHz at 0130z and will give out CW QSOs as well.

IRAN - EP2MKB, has been found on 3505 kHz around 2110z.

-- ARRL DX Bulletin 35, dated 14 August

ROARS SILVER JUBILEE AWARD

To Commemorate the 25th Anniversary of the Royal Omani Amateur
Radio Society, the society has introduced the above Award.

Period:
From 1st October 1997 to 31st December 1997.

During this period all A4 Stations will use /SJ after their suffix. e.g.
A41XX/SJ, A45XX/SJ, A47RS/SJ. A special event station A43XXV will be
QRV from 17th to 21st December 1997.

Conditions for the Award:

The Award will be issued to any DX stations which qualifies to get
Five (5) points:-

Special Event Station A43XXV counts 3 points
Club Stations A47RS/SJ and A47OS/SJ counts 2 points
Other individual stations counts 1 point

Contact with the same station on different Band or Mode double the points.

Fee for the Award:
Send your certified log copy with 10 IRCs or US $ 5 to:

The Awards Manager
ROARS
P.O.Box 981, Muscat
Postal Code: 113
Sultanate of Oman.

Wishing you every Success. Best Regards,

--Nasser Khalfan Al Rawahi, A41KG, Awards Manager.

CLUB NEWS

CHIFLEY AMATEUR RADIO CLUB

The Chifley Amateur Radio Club is holding a boot sale on Saturday the
23rd of August at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton. Across the road from Big-W at Plumpton Markets.
Members, Guests, visitors and vendors are all welcome.

There is no charge for vendors to set up and dispose of there treasurer.
No comission charged to the vendors or buyer, it's FREE, just open up
your boot and you are open for business.

Tea and Coffee will be free. Nice fresh Hot-Dogs will be available too
There are a lot of components and some equipment including a dual

band HF antenna a 70cms Kenwood portable, a satilite receiver and many other goodies.

So come along on Saturday the 23rd and make it a big day.

For information about the club activities, you can telephone us on one of the following Numbers. (02) 9837 226 (02) 9834 1186.

Dont forget Saturday the 23rd August from 1-00pm a Boot Sale at the Chifley Amateur Radio Club.

--The Publicity officer Michael VK2EK

THE HORNSBY & DISTRICT ARC. INC.

The Clubs next formal meet is on the 26th. August 1997, at 8:00 pm. In the Mount Colah Community Centre. Pierre Close Mount Colah. (near the eastern entrance to the railway station.) At which our quest speaker, will

be Keith VK2ZZO the talk will be on the history of VK2TVG. and a little on what goes on behind the scene to bring the test transmissions, from VK2TVG. the technology station to the viewers.

The training clasess for 1997 are now closed, for more information contact Tony VK2BTL by phone on 9487 3383 once more 9487 3383.

The Club holds a Net each Monday night at 8:00 pm. on VK2RNS. with a frequency of 147.250 with a positive offset.

If you would like more information about the Club, write to HADARC., Post Office Box 362., Homsby 2077., or phone John VK2WRT on 9807 2490.

--John. W. Turner VK2WRT Publicity Officer.

WAVERLEY AMATEUR RADIO SOCIETY

Many of you listening to this broadcast would be familiar with the Heard Island DX-pedition earlier this year and I am sure would have liked to have taken part. The next best thing is to come along to our next meeting where David Muller, VK2JDM, who was the only VK expedition member, will give a presentation.

Those who have heard David's talk and seen his video and slides say that this is something not to be missed and that it will appeal to anyone with an interest in the Antarctic. So make a note in your diary for 7:30 pm

next Wednesday, the 20th of August. Anyone interested is welcome to come along.

Our club house is next door to the Rose Bay RSL Club in Vickery Avenue, Rose Bay, off New South Head Road.

--Simon Buxton, VK2EII, President

MANLY-WARRINGAH RADIO SOCIETY

This Wednesday is lecture night at the Manly-Warringah Radio Society. In the first of two non-technical lectures planned for the 1997-1998 season, Sean Mcloughlin will talk about "Communicating with the Japanese". Sean is a teacher of English as a Second Language and a musician and has had great experience in dealing with the Japanese in Japan where he was in charge of a school of some 30 teachers who were indiviudally subcontracted to firms who wanted their staff to learn English. The hazards associated with this job were a mix of Japanese protocols up against Western perceptions and, in our terms, could be likened to the ultimate design for a square-wave generator.

As usual doors open at 7:30pm, and the lecture will commence around 8pm. Visitors are most welcome.

The Manly-Warringah Radio Society meets every Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, with a business meeting on the second Wednesday, and a lecture on the third Wednesday of the month.

If you need directions to get to the club, just call in on the club's two metre repeater on 146.875 MHz, or phone the club on any club night on 9450-1746, that number again 9450-1746

--Richard Murnane VK2SKY, Publicity Office

BROADCAST ROSTER
Next Sunday, 24th August 1997

Morning:
Announcer: Geoff VK2EO
Engineer: Brad VK2QQ & John VK2WRT

Evening:
Announcer: Alan VK2XAT
Engineer: John VVK2FRJ

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.
Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

Sorry about that Herman. It was somewhat interesting the way jimbo and
others quipped at each other. But its obvious that jimbo cant handle it.

Hi, I've got for sale on Ebay's Auction Web a:
Antique Majestic AM/Police Tube Radio, Model 666, 6 Tube: 2/ G-58-S, G-2A7-S, G-80, G-55-S, G-2A5. Frequency coverage is the AM Band, with a Police band at the top end of the AM band. Dimensions 38" Tall, 10 1/2" Deep, 19 1/2" Wide, 12" speaker. The case is in sound restorable condition, although, I think there is a piece missing that would sit on top, and is decorative. The fabric covering the speaker area is thinning on one side, one knob on the side is missing.
40 lbs S&H, please e-mail me your zip code for accurate shipping costs. Thanks for your time. It's URL is:

Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, K4PC, N4GN, W4FOA, W4NS, WB2YQH & WB2RAJ THE 59(9) DXReport, AA7AV, K7JJ, AP2TJ, BV/N0IAT, CX8DX, EX0V, 9M2OM/G3NOM, 9M2TO, G3SWH, G3SXW, G4BUE & DX News Sheet, JA4DND, PS7AB, RA1QHJ, SM7NAS, SP2FOV, VK4LW and VK4AAR for the following DX information.

5H, ZANZIBAR ISLAND (Tanzania). Phil, G3SWH, will be active on CW only all bands from 80-10 meters, conditions permitting. From September 16-22nd, he will be active from mainland Tanzania as 5H3/G3SWH and from September 22-29th, he will be on Zanzibar Island (IOTA AF-032) as 5H1/G3SWH. Phil will be using one of the IOTA Committee's Yaesu FT-900AT transceivers with 100 watts to wire antennas. This is a holiday operation, and activity will probably be restricted to 3 or 4 hours per day. There will be a special printed QSL made available, either from his home address: Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS19 5HQ, United Kingdom, with SAE and adequate return postage or via the RSGB bureau.

5V, TOGO. The Voo-Doo Contest Group has announced they will be active as 5V7A in the upcoming 1997 CQ World-Wide DX CW Contest on November 29-30th. They will enter the Multi/Multi category with eleven team members, eight one-kilowatt stations (all TS930 and Alpha amplifiers), 18 antennas (including nine Force 12 and Cushcraft yagis; and also balloons/kites for a 160 meters 132 foot vertical). This is an expanded operation from their 1996 project which secured a first-place contest finish. A sea container is en route from UK with 100 ft. of tower, 2500 ft. of hard-line and 2000 ft. of rotor cable. Full details of this Contest/DXpedition are available on their Web page (thanks to Warren, K7WX) at the URL: http://www.getnet.com/~k7wx/5v7a.html. The WEB site contains many photos, maps, QSL cards and much more. Please drop by and also check the "Flash" section from time to time for latest news. Team members will activate their personal call-signs outside of the contest, including WARC

bands: G3SXW/5V7A, G3ZEM/5V7ZM, G4FAM/5V7FA, GM3YTS/5V7RF, K5VT/5V7VT, K7GE/5V7JL, K7PN/5V7PN, KC7V/5V7MF, N7BG/5V7BG, N7MB/5V7MB and W6RGG/5V7BV. QSL via home-call except 5V7A which goes to GM4AGL. They will also welcome E-mail requests for bureau replies for 5V7A cards. Send request to: g3sxw@compuserve.com

9M0, LAYANG LAYANG ISLAND (Spratly Islands). If you missed the N2OO's operation from here last week, you will have a second chance this week. Pekka, OH2YY, currently based in Beijing, will be making another short operating stint from the Layang Layang Resort. Currently his call sign is still pending, but it will be issued upon his arrival in Kota Kinabalu, East Malaysia, his port of departure to this DXpedition. Pekka's expected arrival is during the morning of August 19th, local time, and his departure will be on the morning of August 22nd. He plans to be active almost immediately following his arrival. The equipment is a Yaesu FT-840 transceiver and Cuschraft R5 and 40M dipole antennas. If arrangements can be completed, the beam antenna used by N2OO will be left behind for this operation. The "regular" bands 7, 14 and 21 MHz will be employed, almost exclusively on SSB. Watch 7045, 14195 and 21295 kHz. Pekka is no stranger to DX in his native Finland and has recently joined the spirit of the South China Sea DX Team in preparation for exploits to several rare countries in the region. Pekka is extremely thankful to Alfons, 9M6MU, and Doris, 9M6DU, who have provided extremely valauble assistance in making this operation possible. QSLs for his Spratly operation will be handled by Martti Laine, OH2BH, Nuottaniementie 3D20, 02230 Espoo, Finland.

AP2AP IS A PIRATE! The following was sent to OPDX on behalf of PARS by Tariq, AP2TJ: "The Pakistan Amateur Radio Society (PARS) advises all radio amateurs that the call "AP2AP" being used by JA8WPP and/or JA1EZM is a fake. No such call has been issued by the licensing authorities to anyone and these "Amateurs" have no permission to operate in AP temporary or otherwise. There has been no change in local licensing regulations.
PARS requests all amateurs to discourage this type of piracy by not responding to CQs or QSO requests from this fake call. Such activity can only be detrimental to the genuine hams in AP. The operator should also be advised that it is known that he is a pirate.
ARRL and JARL are also being informed by copy of this notification so that QSL cards from this station are not accepted for any awards. This is in addition to any legal or punitive action the local authorities may take against the operator/s for illegal operation of a transmitting station under the relevant laws."

AP50, PAKISTAN. Tariq, AP2TJ, reports to OPDX that the digital station AP50NK will be active in Amtor/Pactor/Gtor (auto-reply) on mark frequencies 14065 kHz (0300-1700z) and 7038 (1700-0300z). Contacts with AP50NK will qualify as a QSO for the AP50 Golden Jubilee award.

BU, TAIWAN. Prefix Hunters start looking for this new prefix "BU". Look for BU0DX on the ham bands, especially 20 meters CW. QSL to BV200: c/o CTARL, PO Box 73, Taipei, Taiwan, Republic of China.

ER, MOLDOVA. Chris, K4PC, will be leaving with a team of workers on September 27th for a two week missions trip to work in some children's orphanages in Moldova. They will be installing hot water heaters, weatherstripping windows and installing FM radio receivers for the children to listen to broadcasts. If any spare time becomes available, Chris is hoping to operate RTTY, CW and SSB on 40, 80 and 160 meters. He has been in contact with Sergey, ER1AN, by E-mail and fax about obtaining a license, and he is almost sure Chris will be issued a license. All the paperwork has been faxed to him and forwarded to the PTT for approval. Sergey and Chris hope to hear about the results within a few weeks. He will not be taking any equipment, so he will have to try and operate from a home or club station. More updates and details are forthcoming.

EX0, KYRGYZSTAN. Valery, EX0V (ex-UM8NU), reports he is now active on RTTY (thanks to Juanjo, EA3CB, for a gift computer). Look for him on 14080 kHz +/- QRM around 0100-0300 and 1200-1800z. He also plans to be active on the other bands (80-40-30 meters). If any person wants to make a schedule with him, send E-mail to: EX0V@amsat.org. QSL EX0V (and UM8NU, UM8NAP, UM93NU, UM1N) to N6FF (ex KL7H/W6).

HB0, LIECHTENSTEIN. Henry/SP2FOV and Kazik/DL2SBY will by active from here as HB0/SP2FOV and HB0/DL2SBY, from Augsut 20-27th. They plan to be active on 80-10 meters on CW, SSB and RTTY. QSL via home call.

HELP WANTED (one spot filled). Rick, VK4LW, from ODXG reports they have filled one of the two operators needed for the upcoming Willis DXpedition. The new operator added is Bill Snider, K6KM. Bill, within the past year, has operated as TI2/K6KM, TI4/K6KM, M/K6KM, OH2/K6KM and OH0/K6KM. He has also operated from EP, DL, KH5, KH2 and GU. Bill's perfered mode is CW, but he does operate the SSB contests. ODXG still needs another operator ASAP!!!!! They have had a few interested parties but none confirmed as of yet. The DXpediton has a mixture of OM's or YL's. If interested, you will need to be in Cairns ready to go at the boat by 1230z, September 9th. You will return approx. 24th September. Please contact Rick if you are interested at: zerk@keylink.com.au.

HR6, HONDURAS. The same group of Uruguay Dx Group that activated CX0XY, P40AN/CR and last year FO0/ALE/CAA/REB will be on Roatan Island (IOTA NA-057) from August 23th to September 3rd. Look for HR6/CX3CE, HR6/CX4CR and HR6/CX3AN to be active on all bands including 6 meters and the WARC bands. Activity will be mostly SSB, but with some CW. QSL via CX3CE, Box 244, Montevideo 11000, Uruguay-South America.

HZ, SAUDI ARABIA. Vic, N7CVJ, at HZ1AB says the gang there is making big plans to be in the 1997 CQ WW RTTY Contest, September 27-28th. Most likely this will be a Multi/Single all band effort.

IOTA NEWS.....
COUVES ISLAND (IOTA SA-028, also DIB 70 [new DIB]) will be active October 9-12th. The callsign to be used is ZW2E with activity on CW/SSB on the usual IOTA frequencies. QSL via PY2YW.

Chuck, N4BQW, will be active on the Hawaiian island called Terns Island (IOTA OC-055) from August 27th to September 5th. He will concentrate on Europe during openings. QSL via WA4FFW.

Tex, 9M2TO, will be active from Pulau Perhentain (IOTA AS-073) as 9M2TO/P from August 30th to September 1st. Tex is traveling to this island with his diving team, so his operating time will be limited. Activity will be mainly CW, so check the normal DX frequencies on 20/17/15 meters. QSL via JA0DMV direct or via JARL bureau.

A group of JA operations will activate OKI Archipelago (IOTA AS-41) September 13th (starting at 0600z) to September 15 (ending 0200/0300z). Callsigns to be used are: JA4AHV/4, JA4DND/4, JI4POR/4, JM4BPV/4, JM4MAQ/4 and some other JA4s. Operations will be on 160-6 meters with activity on CW/SSB/RTTY. Check the DX and IOTA frequencies. QSL to home callsign via the bureau or CBA.

IRCS (Special Request). Alan, VK4AAR, sent your editor the following important message: "Hello Tedd... I must plead with DXers to make sure that their post office puts an official imprint on the left hand side of IRCs when they purchase them. If they use 2nd hand IRCs that don't have this stamp, I suggest they try to "unload" it/them at their local post office and thereby remove them from the system. In any case, don't send them to me if you need me to supply a QSL card. My post office (the only one for 80 Kms!) has suddenly woken up that I have been tendering the occasional invalid IRC for stamps and now is refusing them. I have paid the postage for a few people but that will now cease... I can't afford it on my pension.
PLEASE MAKE SURE THAT THE IRC(s) ARE CORRECTLY VALIDATED AT YOUR POST OFFICE WHEN YOU PURCHASE IT (THEM). I WILL NOT (N-O-T) BE ABLE TO REPLY TO YOUR REQUEST IF THE IRC(s) ARE INVALID. I would appreciate it if you could publish this on behalf of QSL managers everywhere.
Thanks..... 73 de Alan, VK4AAR"

J3, GRENADA. Harry, W8KKF, will be active in the 1997 CQ WW SSB Contest as J37K. He is also looking for more operators to join him. You can contact Harry via his E-mail address at hflasher@dayton.net or via the telephone at 937-434-9616. QSL via home call.

JW, SVALBARD. Kjell, SM7NAS, informs OPDX that from August 29th to September 1st he will sign JW/SM7NAS. He will be operating from the QTH of JW5E (the local ham club in Longyearbyen, Svalbard). He states the antennas that are available there are a 5 element beam up 100 ft for 10/15/20 meters and a full size delta loop for 40 meters. If possible, he will operate on the WARC bands and the low bands as well. The low bands will be difficult due to the sunlight that is almost round the clock. All QSLs go to SM7NAS via bureau or direct: Kjell Adolfsson, Dalbovagen 16B, S-59096 Overum, Sweden.

KH0, MARIANA ISLANDS. Skip, JE2HCJ, is planning to go to Saipan in the Northern Mariana Islands from August 22-25th. He plans on using the callsign N2PQE/KH0. Activity will be CW/SSB/RTTY on 40-10 meters. QSL via JE2HCJ. If you want make schedule for North America or Europe,

please contact JE2HCJ via E-mail at je2hcj@ibm.net.

QSL INFO AND NEWS.....
If you had a chance to work Ray, 9M2OM/G3NOM, from Pulau Besar Island (AS-097, which is part of the Johor West/Melaka State Group located in the Malacca Straits off the West Coast of Peninsular Malaysia) as 9M2OM/P, QSL via G0CMM, John Bell, 28 Stiles Avenue, Marple, Stockport, SK66 LR, England, UK. Please mark clearly the /P, and IOTA Number on the card. A special card will be printed for the Malaysian Islands operations.

REGARDING 7Q7EH QSLS (Update by Chris, AA9HD). "There has been some confusion regarding my status with 7Q7EH, and I would like to clear it up. I am a college student, and am moving to a new apartment. Due to the fact that I was away at school, the 9th area sorter could not contact me regarding the 7Q7EH QSLs he was holding for me. (Any messages regarding the matter were never forwarded the school QTH by the folks at home.) As soon as he was able to contact me, I picked up the QSLs waiting and will ship them to 7Q7EH shortly. Also, any QSLs sent to the W1 bureau for 7Q7EH via W1EH (his home call) are being forwarded to me and will be shipped to 7Q7EH. I would like to emphasize that ALL CARDS SENT VIA BURO will be sent to me and forwarded to 7Q7EH. Please keep this in mind when QSLing 7Q7EH:
1. W1EH is an incorrect QSL route. QSL 7Q7EH via AA9HD.
2. My home QTH will remain the same (I am moving to another apartment at school.) The address is: Chris Cieslak AA9HD, 810 N 16th Ave., Melrose Park, IL 60160-3829
3. All direct QSLs sent to the above address have been shipped to 7Q7EH on a regular basis.
4. I have worked out a schedule with my bureau sorter so that he has no problems in contacting me. Cards sent via bureau will be picked up on a regular basis.

I hope that this clears up any confusion. If you have any more questions regarding the matter, please feel free to contact me at: ccieslak@uiuc.edu. I apologize for any delays this mixup may have caused. I intend to continue serving the DX community to the best of my abilities....." 73 and Best DX, Chris Cieslak, AA9HD

UE1QQQ/1 "Polar-97 DX-Pedition" QSLS. Albert, RA1QHJ, states the QSL cards are currently being printed. Albert: "Please don't worry about them. All stations which are "in the log" will receive QSL cards from us." QSLs are "OK" by direct mail, but remember that 1 IRC is insufficient for reply. Please send 2 IRCs or 1 Green stamp for direct reply (usually letters will cost 3500 Russian rub., but 1 IRC = only 3000 rub.).

To avoid delays, QSL both AH7X and AH7X/AH0 via JP1NWZ.

TT8, CHAD. Burns, W4FOA, talked\worked Jim, TT8/WA4KKY, who is in Chad repairing/installing some sort of communications system. He passed along the following info: He and John (WB4MBU) will be alternating in/out of

TT8 for what he said was more or less permanently. Jim indicated he (and John) will be active around 18150 kHz, although he was worked today on 14225 kHz. Also, he stated he is hearing quite well on 75 meters and will be on 3928 around 1100-1230z which he indicated was his "gray line" (some confusion on this point). He also stated he had just moved, so his callbook address is not correct and was telling all to QSL via the WA4 bureau. Jim also mentioned that plans are for John to bring some digital stuff with him when he arrives around 6-7th of September. He did not further identify what digital equipment he would be bringing.

VR6, PITCAIRN ISLAND. "The 59(9) DXReport" states Tom, VR6TC, has been active on 14188 kHz at 0130z and will give out CW QSOs as well. QSL via WD6GUD. Tom is the real OT of Pitcairn Island!

EXACTLY Lil Ol Jimmy reminds me of the old Star Trek episode about the alien entity that feeds on the energy of fighting factions. Lil ol Jimmy Joe Bob is just that alien. He keeps feeding the fires and sitting back and taking in the juice. Must be nice to not have to work for a living, sit back collect $$$ off the federal teat and type some of the most asinine stuff I've ever read.

ENUF Jimmy Jim Bob, you're killing us all. Change your tune and while you're at it, learn to spell and change your underwear. The stank stench is getting intense

Thanks for reading!!

I am the lucky owner of a rather antiquated, but powerful Kenwood TR-7950 2m mobile radio. It is in fine condition and has worked well all the time that I have had it, but there is one thing that has been a constant drawback. I cant generate PL tones with it. It has a menu (a very simple one) in which you can set tone 1,2, or 3 which I am assuming are preset or hardwired PL tone settings. Since I do not own the manual I really have no way of knowing if it is possible to reset them or if they even are referring to PL tones. I really would appreciate your help in that I have so far been unable to even find anyone who owns a 7950 much less knows how to modify it.

Thanks! - 73's - N1PPR - Matt

(I have been told that I may need to aquire a PL tone board to install in my rig, if this is the case any suggestions of where I might find one would be very welcome)

2883. Re: Frequency Offset information for NEWBIE

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-17 00:00:00 UTC
From: Ed Arnold <printplus@zippy.intcom.net>
Message-ID: <33F7A853.5F6C@zippy.intcom.net>
Source record: 191713

I know how you feel, NEWBIE. A week ago, I asked a similar question
(what are the actual normal offsets for 2-meter, 220 and 440 MHz bands?)
on this newsgroup and two people wrote back saying they hoped I did not
use the information to cause them radio interference.

What jerks! (Except you, or course, Curtis.)

I asked in a follow-up (that noone answered) if all amateurs were that
way... cause it sure appears to be the predominate response attitude one
gets through this forum. I hope organizations like the ARRL and others
will start promoting that amateurs should show their best sides to
anyone they come in contact with, because right now all I can see is
mostly butt-cheeks! Looks like the CBer's had them pegged all along...

Regards, and best of luck...
Ed

You don't even need to do a software mod!!!!!! Remove solder pad 1 and
the first resistor above it. Then, you will have transmit (about
118-200 and 350-500) due to the solder pad, and then do this:
Set VFO 1 to 144.0 and VFO B to 435.0. Hold knob, ptt, and lamp while
powering up. Like a normal menu, select the band menu and turn it till
it says "free". Now you have 76-540 and 590-999 straight through.
Don't mess with the other settings until you know what you are doing,
because you can royally f*** up your radio. I know this works for the
FT-50RD (sn XX18 etc.)

Thus, you do not have to do anything weird with the software to get
what you want. The resistor is SMT, so you will need fair experience
and a low-wattage, pointed tip soldering iron. (A Metcal works great!)

Pretty scarey, because I don't think it will take long for zealot prosecutors
to start to apply it to other things -- I can see it now:

"Well, that car you sold was used illegally in a bank hold-up. 20-to-life!"

"Sorry, but those steak knives you sold were used to kill someone. Off to the
Death Chamber for you!"

The only saving grace was that this legal precident was set in California,
where most people know all the nuts are anyway.

50-to-1 says it was a liberal appointee that made the decision too..

I just picked up a couple of Heath Weather stations model IDW-4001. What
I did not get was the temp. sensors with them. I got every thing else
working but I don't know what the sensors are. Does anyone have the
specs. and or schematics for these units?
Thanks..

Michael, I believe a landline would have been the right way. A new ham in "Jim's" situation is probably going to be rather embarrassed by someone interrupting (which, IMO, is worse than what Jim was doing) and telling him all the things he's doing wrong.

> > Of course, if this guy had a real elmer, this probably
> > wouldn't have happened, but that's a different argument.

I'm thankful for my sort-of elmer, Riley, KE4PNM (Advanced class, not no-code Tech!) who has helped me a great deal. If there ever was any question as to my operating practice (which there has been), Riley would call me on the phone and tell me about it. Much better than taking me to task over the air. Although, I can take it over the air as well. Being a Baptist preacher gives one a thick skin. One of the harder lessons I have learned is when to simply shut up and let the other guy think he's won -- saves alot of wasted hot air.

> Is it really not OK? Does it really matter if we use the "Q" codes or

> My $.02

Now to Stan's contribution: Stan, you have got it down. Why must hams be nitpickers? Why not leave that to lousy people? (People with lice have reason to pick nits ;->)

No-code, Pro-code, new and old, hams are all still hams and all have something to offer.

73,

Lamar

Then might I say in a very mature way that you have a very socialist tone.

I think that the correct capitalist thing to do would be perhaps to let the organization bankrupt itself. I think the remarks being given are very deserved. When you spend money on something or someone that does not deliver, a bad reputation will come of it. Who wants to invest on a loser. 3D maybe a heck of a bird, but it needs wings. They trusted someone who did not come through.

On a subjective note, I would have told the ESA to build there own mass simulator. If they cannot work out the engineering in the first place to hand Amsat for a successful launch, what makes Amsat think they can be trusted at all..... Bad business.....

BTW I am not out any money myself, or if so very little. I joined Amsat but I hardly qualify as a major or minor contributor.

>73 Allen Lowe N0IMW

Good advise NOT! These doorbell transformers have thermal cutouts that open the transformer when they are overloaded and/or hot. Replacing it with a regular transformer without a thermal cutout or some sort of overload protection is asking for a nice toasty house fire.

BTW, after investigating radio and TV interference for over 15 years, I have yet to have an electric meter cause electrical interference. I have seen some of the new units cause RF noise, but not electrical interference (although sooner or later there may be a "first"). Opening the braker (sic) will tell you if the noise is in your house or not. Period. After that, the source will need some thorough tracing (neighbor's home, bad insulators, etc.). Have yet to find noisy wires, unless it is the primary (transformer high-side) hitting tree branches, etc.

John

Source record: 191722

Hello there,

Is there anyone out there that can help me with collecting callsign databases from around the world for a project that I have been doing for the last three years.

I have at the moment a database of Ham Radio Callsigns from the following areas:

UK about 60-70% complete
Northern USA about 30% complete
Southern USA about 40% complete
Europe about 40% complete
Asia about 20% complete
Australia about 5% complete

This database is in (PC Formatted) dBase 4 format and currently holds over 7.8 Million callsigns, names, addresses, locations, and notes if applicable.

What I am after is more information to enter into this database, If anyone can either e-mail a database with callsign information in dBase 3 or 4, or ASCII Text delimited. so that I can add the information to my database, in return I will send them the database as I have it so far (on CD-ROM), and when hopefully I can get to a stage where I can publish it, which I am aiming at later this year, I will send the the finished article FREE OF CHARGE later this year.

I look forward to hearing from you

All the best

You wouldn't think about asking dietary advice or what makes up the ingredients in a can of mixed veggies from a clerk at 7-11. Why would you seek technical assistance from Radio Shack?

When I walk in, I know what I want to purchase. The only questions I need answers to are, "Do you have it?" and "How much is it?". When I went in to purchase a closeout HTX-212 last year, I asked to see the manual.

Don't expect a minimum wage (or close) employee working for a company which provides almost no product training to do your engineering for you.

The following is a QST

Hams in New York make the state games a success, the ARRL announces lots of award winners and the story of the cellular trees? All this and more on Newsline report number 1044 coming your way right now.

(*****

EMPIRE STATE GAMES PUTS HAMS TO WORK

Nearly 100 amateurs, many traveling from the Buffalo, Ithaca, Rochester, and Syracuse, New York areas, again provided public service/public safety communications for the Empire State Games this past weekend. With over 6000 athletes participating in 27 sports at two dozen locations throughout the Albany area. It was thought to be the largest public service event ever to involve amateur radio in the Capital District.

Amateur radio was the sole means of communications between Games headquarters, the venues, and medical and food service personnel.

Opening ceremonies, held Wednesday evening at the University at Albany, also pressed amateurs into service for parking, crowd control, security, and even "balloon management."

The third set of games to be held in the State Capital, this marked the first time that Games communications was managed locally. April Stack, KA2QIG, with the full cooperation of ARES and RACES organizations from Albany, Rensselaer, Saratoga, and Schenctady Counties, handled all scheduling and coordination duties. Her contacts with the region's police, EMS agencies, and local government, developed through her activities as an ARRL PIO and an Albany County ARES AEC, help to achieve greatly improved liaison between these agencies and Games volunteer staff.

The W2LWX repeaters on 146.94 and 448.425 MHZ were temporarily linked and used for all communications, through the cooperation of Dave Edwards, WA2GBO, and the Telephone Pioneers of America. The Capital District Repeater Net graciously moved to their backup repeater for the duration of the Games.

PROPOSED NEW SCANNER LAW

If you're an amateur radio operator or perhaps just a general scanner enthusiast, a warning to listen up. New proposed legislation would drastically cut your ability to monitor radio frequencies.

The idea is to outlaw scanners from being able to monitor huge chunks of spectrum, one estimate says nearly 20% of the entire VHF/UHF scanner spectrum between 30 and 2000 MHZ.

Opponents call the bill pure poison to all radio hobbyists. Many business radio channels, trunking, itinerant channels, and even weather satellites, Civil Air Patrol and MARS would be affected.

While the new restrictions have not become law yet, opponents are urging hams, scanner enthusiasts and other radio hobbyists to contact their local representatives immediately.

We'll have more on this story in future newscasts.

(Via Newsline)

(*****

K2WK DEFENSE FUND UPDATE

Hams throughout the New Jersey - New York area are working hard to help pay the legal costs of a ham caught up in a nuisance case brought by a neighbor. Already they have sold half of the 250 chances for the ICOM 706 radio which will be drawn at the NJ State Convention in Lincroft on October 12. The moneys derived from the raffle will be used to help pay K2WK's legal bills after he won the case only to have it appealed by the neighbors who brought it.

(Via TWIAR)

(*****

CABLE BOX FINE

Out west, a defunct Santa Monica, California company has been hit with a record setting $25.4 million civil judgment for selling altered cable boxes. The judge issuing the fine has also set case precedent that can and will affect all future prosecutions of contraband electronics equipment.

U.S. District Judge Julie Carnes has ordered National Electronic Wholesalers and its owner, Jeffrey Fenley, to pay $21.3 million for selling altered cable terminals so people can use them to get pirated cable service. Fenley also was ordered to pay $4.1 million for false advertising and infringing Scientific-Atlanta's trademark.

Judge Carnes also issued a permanent injunction barring the company from advertising or selling any device used to get cable TV service without paying for it.

But here is where the legal precedent was set. It came in her ruling that published disclaimers warning the public that using certain devices is illegal. Judge Carnes said that the use of disclaimers in advertisements for altered set top terminals is not a viable defense, and that a plaintiff does not have to show the defendant intended to violate any laws.

In other words, if you sell something electronic that can be used illegally you can be held accountable. This, even if you present the purchaser with a written warning that says use of the device is illegal.

(Via Local LA news reports)

(*****

ARIANESPACE POLITICS

The Reuter News Agency reports that a power struggle has broken out in Europe's Arianespace. That's the company that builds the Ariane 5 booster that should eventually launch the Phase 3D ham satellite into orbit.

Now comes word that France, the largest shareholder, wants to name the head of the European Space Agency, Jean-Marie Luton, as president of Arianespace. This, instead of Charles Bigot's long designated successor, Francis Avanzi. And the political infighting over who will head the company is having a negative effect down the line.

Arianespace, based near Paris, controls more than half of the world's commercial satellite launch market. As reported two weeks ago, AMSAT announced that the lunch of its Phase 3D ham satellite would again be delayed after the European Space Agency handed them new vibration survival requirements for launch on the new Ariane 5 boosters.

(Reuters via Satellite News)

(*****

CHURCH PCS SITE

While demand for portable phones continues to rise, cellular telephone companies are finding a growing obstacle to providing service. From coast to coast, opposition is building to the proliferation of cellular telephone towers. They're essential for communications, but homeowners think they are ugly and they don't want to see them.

In central Alabama, however, a compromise appears to be in the works between one community and a digital cellular company. Sprint PCS needs a tower in a residential area south of Birmingham. At the same time, members of the Christian Life Church move ahead with plans to build a new church near several neighborhoods.

The Church site offers just the right location for the tower Sprint needs. So, rather than try to put up its own tower and risk neighborhood opposition, the company has struck a deal with the Church. Sprint PCS will house its antennas inside the Church steeple. Company spokesman Steve Drew says the antennas will be undetectable and the Church benefits financially.

(Via Newsline)

*****

ALABAMA JUDGE RULES FOR PCS

Meanwhile, a federal judge in Birmingham has ruled in favor of two competing PCS providers who had joined forces and filed suit against Jefferson county over moratoriums the county had imposed against building new towers. The judge blew the county away, saying its actions were not lawful. He then ordered the county to process the PCS' folks pending applications for towers.

(Via Newsline)

(*****

CEL-TREE ANTENNAS

The cellular telephone industry has come up with a novel way to disguise its towers that hams might want to think about. It's using simulated trees. Yes, we did say simulated trees, as in some of the strangest looking trees that some states have ever seen.

One of the easiest to spot is the cell site disguised as a pine tree located on Interstate 25 between Denver to Colorado Springs, Colorado. It's reportedly owned by NEXTEL and is rumored to have cost them a pretty penny. Although this tower is hidden well from the view of the non-rf knowledgeable general public, it's discernibly obvious to hams and other tower-spotters. This is because it stands a good 20 feet higher than any other real trees around it. And coincidentally is upper branches are spaced 120 degrees apart!

ARRL AWARDS WINNERS

Some awards to report from the American Radio Relay League. Zachary Manganello, KB1BMG, of Cumberland, Maine, is the winner of the 1996 Hiram Percy Maxim Award. The ARRL Board of Directors approved the award at its recent meeting. The Maxim award is given annually to the licensed radio amateur under age 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities. The winner receives a $1000 award and an engraved plaque.

In other action, the Board chose L. James Biddle, WB3DCL, of Newtown Square, Pennsylvania, and Beverly Priest, N8VZV, of Dayton, Ohio, as joint recipients of the Philip J. McGan Silver Antenna Award. This award recognizes public service contributions. The Board also selected Bill

Carver, K6OLG, of Twin Falls, Idaho, as the recipient of the ARRL Technical Excellence Award for his article, "A High Performance AGC/IF Subsystem."

Sam Brown, WA4IUM, of Knoxville, Tennessee, was tapped by the Board to receive the first ARRL Media Excellence Award. In making the award, the Board cited Brown's distinguished career as a professional television news anchor and his "outstanding success" and long-term commitment to promoting Amateur Radio on television.

Finally, the Board named Eric J. Lagerstrom, KN6FR, of Seaside, California, as the recipient of the Herb S. Brier Instructor of the Year Award for 1996, and Bruce D. Weaver, K3LTM, of Knoxville, Pennsylvania, as the recipient of the Professional Educator of the Year Award for 1996.

NEW JOB FOR EX FCC COMMISSIONER

What do former FCC Commissioners do once they have left the agency? Most of them go to work in the private sector. One of these is former commissioner Tyrone Brown who has joined ClearComm LP to serve as the company's senior vice president for regulatory affairs. According to ClearComm President and CEO Richard Reiss, Brown has joined the company to `assure close communications and coordination with the Federal Communications Commission, Securities & Exchange Commission, and other branches of government charged with the ongoing allocation and regulation of the country's wireless spectrum resources.

Brown, a former Federal Communications Commissioner is currently a practicing attorney at the prestigious Washington, D.C., communications law firm of Wiley, Rein & Fielding.

APRS EAST COAST GROWTH

And APRS digital relay growth is taking off like wildfire along the East coast. First, the KA3ODJ-8 digipeter appears to be back on the air linking New Jersy and Eastern Pennsylvania.

A new digi near Wilkes Barre, Pennsylvania, is also on the air under the callsign WA3LWR-2. It covers Central Pennsylvania, Maryland, New Jersey, and New York.

And W2HE has established a dual port system which relays APRS from New York on 144.39 to 145.79 and vice versa and there is also a very powerful wide area digital system in Maryland at 3,000 feet.

Finally, N3KAE near Scranton, Pennsylvania is establishing a dual-port High Frequency to VHF system which will bring data from 10.150 MHZ to local APRS users.

(Via Hudson Division Loop)

DX - SECOND ANNUAL WSWSS SPRINT

In combined DXing and contesting, the 2nd Annual Western States Weak Signal Society sprint takes place on September 3rd from 7 to 11 PM local time. The object of the sprint is to QSO as many stations in as many different grids as possible on the bands 50 MHZ and up during the four hour contest period. Logs and summary sheet along with an S.A.S.E. go within 30 days to:

Erik Dean, NI6G
3813 N. State Ave.
Fresno, California
93722.

Electronic submission of logs goes to:

ni6g@amsat.org

The ARRL's DXCC desk says that EP2MKO in Iran is "OK" for DXCC. This station has been heard recently on 20 meters (around 14.001 MHZ at 12:00 UTC or between 22:00 and 22:30 UTC. QSL via UA6HCW.

And The "DX News Sheet" reports that EA5FKI will be active in early September from the Libyan 5A1A club station. RTTY was one of the modes mentioned.

(Via DX sources)

(*****

TV FILTERS INFO NEEDED TO HELP A NEW EDUCATIONAL FM

Finally, a new educational FM station at about 89 MHZ has signed on in a remote area somewhat north of Los Angeles, California. This is a region where residents often "dig" for weak TV signals transmitted from Mt. Wilson. The new FM signal has apparently overloaded a lot of TV front ends and mast mounted preamps resulting in noticeable degradation to many incoming pictures.

The FM station has been able to solve a specific TV interference problem by installing an expensive 89 MHZ trap from Microwave Filter Company at one complainant's residence. The question now is whether relatively inexpensive 89 MHZ traps exist. Fortunately, there is no Channel 6 station in the area in question, so a low-Q trap will do.

I guess I'm confused as to why anyone would do the hardware mod either instead of or along with the software mod (unless it's simply that they have a soldering iron but no ADMS software.

Does the s/w mod give you extended transmit as well as cellular receive?

German Hams belong to the DARL (their arrl) for a very different reason. I just returned from Germany. They have some strange laws dealing with Antennas and Transmitters, it is a libility thing for interference. If they belong to the DARL they get around some permits and taxes. To get my German ticket I had to get them to give me a letter saying I was an upstanding Ham even.

The Electron Tubes Online shopping (ETOLS) is open !!!
July 29th, 1997
http://www.halfin.com/shop

To celebrate the 50th anniversary of the company, Halfin
S.A. has opened ETOLS.
The shop contains more then 400 types and each week, new
items will be added. The ETOLS team is working to provide you with
online
information about each tubes presented in the shop using pictures
and/or datasheets.

ETOLS is the first Electron Tubes Online Shopping facility
on the Internet offering direct buying with Visa and/or
MasterCard.
http://www.halfin.com/shop/index.htm

ETOLS is not just a shop. We would like that this site to
become a real center of reference for tube lovers. This project can
only
develop with your participation. The members area provides many links
to
interesting Web sites containing Data Sheets, technical informations,
useful software, fonts, symbols and advise to everyone from
beginners to experienced users.

We can also give you the opportunity to publish your
technical or artistic projects, schematics or simply opinions related to

the tube usage. Any suggestion to improve the members area are
welcome!

The members subscription is totally FREE and any tubes
lover opinion will be appreciated.

I've noticed several people have recommended GMRS for your
application. Unfortunately, (or rather, fortunately in my case!)
it's illegal for new licensee's to use GMRS for business purposes,
except in the situation of a family business. You cannot obtain a
license in a business name, and you cannot legally allow employees
to use your radio system under your callsign (unless they are in your
family). If you want to communicate with your employees (except family
members), they must obtain their own GMRS license.

You will hear a lot of business users on these channels, but they
have been grandfathered for several years now. GMRS is STRICTLY to be
used for personal communications for new licensees.

As someone else mentioned, if FRS doesn't cut it, consider the
so - called itinerant Business Radio Service channels, which
are available on both VHF and UHF. (Personally, I would use 2 to 5
watt UHF handheld radios for this application). The itinerant
channels require a license, but don't require frequency coordination
like other Business channels. Power outputs of up to 50 watts are
allowed on these channels, and the licensing procedure is fairly
straightforward, but you may need some help with some of the
detailed technical questions on emission type and such. Used
commercial equipment is readily available at reasonable prices.
Just follow the rec.radio.swap newsgroup.

Replacing the Resistor Back ?????

WHY WOULD YOU DO THAT ???

The removal of the Resistor enables you to switch from one Band to another,
If you mis the Automatic Repeater Offset you don't need to replace the
Resistor, just switch to Band A1 again and everything will be as it was
at your FT50 when you buy it.

No specifikations or anything else is changed by removal of the FrEEBAND
resistor (0 Ohm = Jumper).

Read the Texts on http://members.aol.com/aeimn/FT50/index.htm

There is a lot of useful stuff.

John After 15 years you should have learned something about trouble shooting by now. Ive been doing it for 30 years. I was going to tell you how it is done. But I doubt if you would listen. So you just do it your way, and maybe you will learn something in the next 15 years.

Hello! I'm looking for a cheap quickcharger for the Yaesu FT-50 dual band HT or any of the radios that use the same battery. The key word is CHEAP! If you have an old, dusty charger, even a broken one, send me an email. In fact, if you have any accessories aside from: Speaker Mic, Black rubber case protector, the 4mm DC jack, or the VX-1 belt clip, let me know. I might just buy it. Thanks!

***

TO ALL AMATEURS IN THE NYC/LI SECTION OF THE ARRL:

An effort has been undertaken to remove Len Buonaiuto, KE2LE, from his position as Section Manager of the New York City/Long Island section of the ARRL.

A Web page containing information on this recall has been established. Members of the Section are urged to read about the allegations made against KE2LE so that they can determine for themselves if KE2LE's actions merit his removal.

The page may be found at http://www.li.net/~jtomason/recall.html

If, after examining the information, you feel that KE2LE should be recalled, please sign the petition, and, when your ballot arrives asking if KE2LE should be recalled, vote YES. Information on how to sign the petition can be found on the Web page, along with the latest news concerning the recall.

Thank you for your time.

Marc Kaufman, WB2DWC, ARES District Emergency Coordinator,
RACES Radio Officer, New York City

Mario Maltese, WF2T, Section Emergency Coordinator, NYC/LI

George Gluck, WA2WKV, ARES District Emergency Coordinator, Nassau County

Jim Everett, WB2ZIE, ARES Emergency Coordinator, Town of Southampton

The staff in a Radio Shack is like any other store. The sales person is as good as they wish to make them selves. The Company showes them how to fill out a sales slip and turns them loose, all for a small per hour, or 10% of sales which ever is higher that pay period.

If the Sales person wants to learn the product line and sell more stuff it is up to him. If he is into Computers thats what he will know. If he is a Ham, well I think you can see what I mean.

The sales staff that bothers me are the ones that do not even know an item by the name in the catalog. I had one yesterday call a test jumper wire a test probe!

Al, I am not disputing what you said. You are correct in the fact that opening the breaker will tell the customer if it's in his house of not. The purpose of my post was to advise that if a doorbell transformer is suspect, it should be replaced with a like device. We (myself and our team of investigators...some of whom have done this for 30 years also) feel that it is the device's thermal cutout which is similar to a thermostat arcing as it is opening and closing that causes the noise.

I work for an electric company here in the northeast, perhaps you work for one too. When we feel the noise is coming from wires, we look for the primary (pole top wires) running through tree branches. As for electric meters, we have not seen any cause electrical noise. This may be due to the type we use. The new demand type units have caused some RF carries-type noise.

There was no need to climb down my throat. I was just trying to help the original poster. And yes, I will learn more in the next 15 years. I just learned a lesson now...keep my mouth shut.

Al, no sense on us bickering over this. Looking back over the years, many times two or more of our technicians have had different opinions as to sources of noise problems. I guess if we all thought the same, we would either be always right or always wrong depending on the situation.

Wondering what you do for a living that gets you involved with noise investigation. Our noise complaints have dropped off. There was a time when I would get 300+ a year. Now it's probably around half that amount.

Ever get the noise from the recessed ceiling lights? That's fun telling a customer it's in their walls! The touch lamps were/are a hit with the ham operators too.

73,
John N3AB

2937. Decisions, Decisions!

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-17 00:00:00 UTC
From: pjohn8888@aol.com
Message-ID: <19970817220401.SAA12738@ladder02.news.aol.com>
Source record: 191797

Got a notice from a certain business recently about my ham license expiring soon. What nice people!!! They even included a 610 form. Curiously, the FCC's address, which normally appears on the top of the 610 form, appeared to be deleted from the form they sent me. Just send the form back to this business with only 6 bucks, and they would take care of notifying the FCC for me. Super!!
There was some small print on the letter about how license renewals were actually free, but it appeared they wanted me to send 6 bucks to them anyway. I had been planning to renew on my own, but what a wonderful surprise this was!!! Shucks, it was awfully tempting to take that 6 bucks out of my wallet and stuff it into the business reply envelope that was provided for my convenience.

Then I got a notice from the ARRL, also reminding me of my license expiration, and that renewals were FREE!!!. The ARRL included a current version of the 610 form and a reply envelope pre-printed with the FCC's address. It wouldn't cost me anything. This is going to be a tough decision. I could pay $6 bucks to renew my license, or I could do it for free. I'll have to think about this for a while!

>
>So Drew, you want to stick that foot in your mouth again andd make a
>fool of yourself once more?

That's funny...I just read a new post by ericoyen@aol.com which was posted less than an hour ago. Looks like the AOL folks are having a good laugh at your expense, OYE BOY!

Don't you get it yet, Eric? You're just a pathetic little nobody who has brought on your own problems by your endless bouts of whining and whimpering on here. You have become a target of public ridicule due to your own nosensical statements which you have written in this forum. If you would simply IGNORE your detractors, they would go away and you would no longer have a problem. But you insist on reacting to them: making baseless legal threats, whining to AOL TOS, and complaining about how you're treated locally in Phoenix on CB and 2-meters (like we really care!) Just like a child on the playground who stomps his feet and yells "I'm mad, I'm REALLY mad" at his tormentors, causing them to engage him all the more. To borrow a famous Phoenix radio term, they've got you "all wound up", Eric. I'd guess that in the days to come, we'll see more and more "ericoyen@XXXXX.com" and "n7zzt@XXXXX.com" participants in this newsgroup. You brought it all on yourself, Eric. Nobody is to blame

besides you. From what I am told, you have ailenated people locally on the radio in the same manner over the years, and suffer from the same problems there as you do on the Internet. Gee, do you think there might be a pattern here?

Get a clue, Eric. And a life. Please! You are your own worst enemy in this world.

I purchased a headset at the local parts house to use with my HTX-202.
I measured the head set mic at 6.5K ohms and the HT needs 1.2K.
Anyone have any ideas on how to get the head set to match or do I have
to change the mic element? Thanks.

Bud

Duffy, you are so right. I dont know what we are going to do. Do
you feel that each day brings more of a threat to our freedoms from our
own governments in the USA? I believe that many of us do feel that
way. We were just given a tax cut that is nothing more than a joke to
make us shut up about a real tax cut. I am very conservative, and I
find that the Republican party supports most of the values I believe in,
but they too have been letting me down lately. The democratic party is
filled with leftists who do not in any way support the values America
was founded on. Those values state that we believe in very limited
government and lots of freedom. That the people are in control of the
government that is highly limited by the Constitution.
However, today, we see the federal and state governments doing things
that are not defined in law anywhere! The federal government is taxing
us to death and using the money in ways our forefathers would not
believe.
Freedom is slipping through our fingers and you and I know it.
In a few years, we will no longer be free in the USA unless we alter
the course of government and roll back taxes, rules and regulations.

Karl Marx said that all democracies will end in socialism. I do not
believe that, though many in our local, state, and federal governments
seem Hell bent upon making it happen.

We have only three roads to go down.

1. We change our course with votes and new, political candidates who
are truely patriotic and sypathetic to the desires of our founding
fathers to greatly limit the power of government.

2. We change our course with the blood of our politicians.

3. We stay the course and loose our country to socialism, and very
heavy handed government.

Those are our three options. I choose number 1. However, if number
one fails to succeed after a serious try, which I believe we did in 1992
when we booted the democrats out of Congress, many in our country may

become so frustrated that we will see number two acted upon.
I do not want to see blood shed. But, those in government must realize that the people are on to the elected officials who have silently planned to change America into something most of us would never desire, and the people are very aware of those who have no plans, except to enjoy the power of the office and leave with a retirement program unlike any in the real world. Both types of politicians are doing harm to our nation. Eventually, they could frustrate the nation so greatly as to provoke an outlash against government.

We the people must be free!

CUT TAXES SHARPLY ON ALL LEVELS!

CUT RULES AND REGULATIONS ON ALL LEVELS, ESPECIALLY EPA WACKO RULES!

STOP TRYING TO CONTROL THE PEOPLE AND TAKE AWAY THEIR FREEDOMS!

The HTX-202 is designed for an electret-condenser microphone with a
2.2k resistor in parallel with it. This is also what is inside the
speaker-mic that Radio Shack sells for the radio.

The 7950 used a tone board with 3 sets of diodes that were cut,
according to a chart, for 3 separate tones. The front panel selected one
of the 3 preset tones to use and memorized which tones went with which

freq in memory. An improvement over the previous generation which only allowed 1 tone but not up to current standards which has all of them.

The alternatives are:

1. find an original tone board (TU-79)
2. install an aftermarket that is preset for only 1 tone.

That's about it..

2956. Radical Idea: Swap 70cm for TV VHF-Lo Band

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-18 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R1808971926110001@news.digex.net>
Source record: 191667

Does anyone know what will become of TV VHF-Lo (ch 2-5) after the switch to HDTV/Digital TV? I presume HDTV is UHF only?

If so, here's a radical idea...

Swap much of the amateur UHF allocations for VHF-Lo.

Why you ask? Well, we all know that commercial interests have their eyes (and wallets) on amateur allocations. And with the FCC license auctions, ham spectrum has turned from swampland into prime real estate. It brings in money. With the deficit, it becomes easy for communications lobbyists to tell congressmen "Hey, you could re-sell those ham bands to us, and bring in a few billion dollars, and cut taxes. That should go over well next election"

So figure that we're bound to lose much of the spectrum anyway. Why not pre-emptively strike a deal? The new push is generally to UHF and microwave, VHF-Lo band has those darn skip problems. No one wants it, Police/Fire depts are abandoning it in favor of 800 MHz.

So work out a deal. Get some of the 50-70 MHz spectrum, maybe even some stuff in the 30-50 MHz area that is being abandoned by public service, paging, mobile, etc. With the next solar maximum just around the corner, VHF-Lo will be getting worse (worse for public service, but better for us!). This is perfect timing for such a deal.

I said I have been trouble shooting for 30 years.
If you start in the middle, you can eliminate 1/2 of the
search area. Cutting the power to the house will tell you
real quick if the noise is coming from inside the house
or from outside. Be a waste of time to check all the things
in the house that could cause noise, only to find the noise was
coming from the house next door.

What does this bs have to do with rec.radio.amateur.ANYthing ??
It may be recreational and it may be amateurish, but it is not radio
and most of the postings of late contain no useful miscellaneous info.
Likewise for rec.radio.amateur.policy / Ham-Policy NG.

I now await the dozen or so admonitions that "if you don't like this
stuff,
why do you read it or subscribe to it?". Damned good question.

A "certain business"? Why not do everyone a favor and tell them it
is W5YI. I just help an elderly ham decide to toss the gaudy mailing
in the waste basket and send the ARRL-furnished form in the envelope
provided.

..... Which reminds me.... Several posters on here have asked
if there is a charge to renew your license, and got really nice answers
concerning the vanity callsign charge. None of the latter have even had
time to run out yet. The instructions with Form 610 clearly state to
send
the renewal in with no fee. Can't people read? - Fred

Bob, I know you. I reckon you wanted to play with this gadget but with
all
the high-tech weather info from at least four services on the Internet,
all
free, and the weather radio, and the television with at least four local
stations providing weather info plus the Weather Channel on cable or off
a satellite provider, what would one want with a personal weather
station?
My thermometers, barometers, humidity gages, rain gage, yardstick for
measuring snow depth fallen on a board, and eyes to see lightning coming
and ears to hear it coming, make the best weather station I know of. Why
not just take the thing back for a refund and use the primitive
approaches
mentioned? If you lived up in the Real Snow Belt or something, I could
see
having a weather station just to collect winter data, but hey, use the
dumb
yardstick and the boards around the property. Weather stations can't be
used to measure snow anyway. NOAA uses a ruler and wooden boards.
I just checked SAM and see you are stuck at Tech+ after all these years.
No offense, but there is so much to be done in ham radio, please excuse
my french, but who the hell needs a weather station with software better
than that provided? Bored?

Sorry to get off on a rant here, but I just couldn't help myself.

Quiet Home-Based Business - Setup and Profitable within 30 Days!

How long have you been talking about turning your
computer into an income producing tool? ...or
dreaming about working from home?
...or taking control of your future?

Imagine quietly starting each day by picking up 20 to
50 "orders" at your P.O. Box -- worth $20.00 each!
It's happening to hundreds of MegaNets software
dealers everyday!

Professionals - Retirees - Home-bound individuals
Students - Business owners - Career military...

..are all involved, NOW! Something must be
working right!!

MegaNets software is sweeping the Internet as an
extremely viable - low investment - business for
thousands of people.

This program works and is growing daily for us -
$400+ per day in just 4 weeks!!!

We are providing the actual MegaNets disk as a
FREE download from our Web Site so you can see,
first hand, the simple power of this program.

WE PROVIDE REFERENCES AND REFERALS FOR
YOU TO SPEAK WITH!! NO GUESSING!!

Make the Internet work for YOU and YOUR family!

We are glad to present you our services and the CD-ROM:

The Dietrich Schuricht GmbH & Co. KG, a catalogue distributor of
electronic components and devices,
has been a business in the service sector for 40 years.
Apart from our efficient assortment of more than 30.000 products of more
than 200 leading producers
in the sector of measurement procedure, automation, semiconductors and
electromechanics, passive components,
tools and computer equipment, we would like to introduce our additional
innovative services:
except the already standardized services like e. g. "delivery on the day
of ordering",
"deliveries as from one piece" and "1 year stability of prices", we
offer you contemporary
methods of payment like e. g. credit cards, or purchasing card,
the possibility to place your orders online via Internet and
KatalogPlus! (in case you have special wishes).

You will find further information about us on our CD or on the internet
(http://www.schuricht.de)
Let us convince you of our efficiency and test our catalogue on CD-ROM!

2971. GE MVP as repeater

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-18 00:00:00 UTC
From: "Matthew W. Steger" <n3ntj@erie.net>
Message-ID: <33F9192A.712B0D1B@erie.net>
Source record: 191682

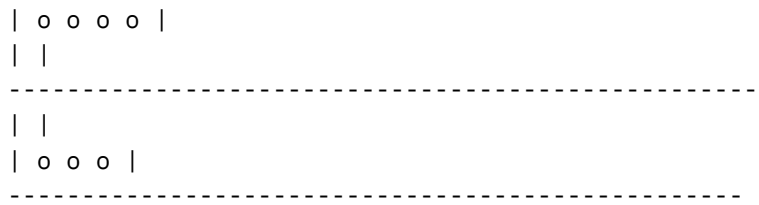
Hello...

I found the mods for the GE MVP radio to make it into a 440 MHz repeater. I performed most of the mods except for the heat compensation one. I have one question that I hope someone can answer. What are the connections in the rear of the radio? My MVP has (doing this from memory now....) a connector on the back with 4 pins (and an empty pin hole next to them) and one either above or below it that has 3

pins (and 2 empty pin holes next to them) . For some reason, I think the MVP has two +12V DC lines.
I see the grounds shorted right to the case. I don't remember if the

4 pins are on top of the 3 pin connection or the other way around. The connection for the mike audio (documentation says J913) was really tough to find since the SAS board isn't labeled (well...I guess GE doesn't believe in that). I took the mike audio at the upper left corner where there is a yellow wire being jumpered to a pin. I soldered

a wire for mike audio at the base of this pin.



It looks something like that...there is an empty hole at the end of the 4 connections and 2 empty holes at the end of the 3 connections. This may not be exact but it looks something like it.

If you can help, I'd appreciate it..

I received one of those letters from W5YI about my renewal also. A
couple of days later I received a form from the FCC (not a 610) that
stated my license was up for renewal and all I had to do was sign the
bottem line and send it in, no 610 required. Sorry about your $6 YI.

Guess I thought they would be quick to catch on, but Michael D
"took exception", and Larry R said:

> The polite, well-mannered "radio cop" was doing "Jim" a big favor.

No, in fact "radio cop" is also known around here as "Richard
Cranium", by everyone including the OO corps. He is an OF
General class, first licensed in 1937 who uses a scanner to lay
in ambush on the repeater frequencies just waiting for a newcomer
to commit some typical newby error. Then he gathers himself up in
a self important and very condescending manner and issues verbal
"pink slips" right on the air. (Rather than via a phone call, or other
"off the air" manner.) All "polite" and courteous, but with the sole
purpose of embarrassing the new guy.

Some favor!

> Hans...I'll sacrifice as many "Jims" as it takes to keep the amateur
> radio service from degenerating into a CB-like "personal" radio
> service. This "first personal" nonsense is just that...nonsense!

This is not a idea to be tossed aside lightly. It should be thrown with
great force.

You really need to go back and read the original post. The whole point,
which either you ignore to be "entertaining", or you missed completely,
is that virtually all newcomers "want to be like the rest of us", and
given a day or two, or an off the air "elmer session" will fit right in.
There are all sorts of newby habits which you, even with your short time
in the service, have learned to avoid. So would "Jim", unless some "full
of themselves" sanctimonious "Richard Cranium" chases them away first.

>Lyle

Lyle,

There is a shareware program called "NuTest" that you can download (try http://www.shareware.com). The Novice questions are included in the unregistered version; you must register to get the technician and higher questions. I used the SW last week and on Saturaday I passed my novice & technician exams! I'm just waiting for my call sign...

The same author also has a program called NuMorse which is what I used to learn 5WPM code (which I also passed). Assuming you plan to shoot for amateur extra class there is a package deal where you can register both programs for $45.

No relationship with the author (Tony Lacy?) except as a satisfied customer.

>Does anyone know what will become of TV VHF-Lo (ch 2-5) after the switch to
>HDTV/Digital TV? I presume HDTV is UHF only?

That's no longer a solid assumption. At this point, channels 7-13 are DEFINITELY to be TV channels forever, and there's at least a 50/50 chance 2-6 will also remain TV channels.

I think it's mostly for the reason you cite: the commercial two-way interests find UHF spectrum more valuable than VHF-low. Add to that the fact that low-band VHF stations want to keep their existing channels for DTV operation (because they can obtain better coverage with lower power), and I think maybe the 50/50 figure is rather conservative..

I would not be surprised to see some spectrum in the 30-50MHz area end up in the amateur service anyway. My understanding is the ARRL is lobbying for a few hundred KHz between 40 and 41MHz and I think they stand a good chance of getting it.

If we're lucky the opening of channels 52-69 (or 47-69) will relieve pressure on the 440 and 1200MHz bands.

It's dusk. You see someone on the road approaching with their headlights still off. You flash your lights as a means of notifying them. Should you be labeled a "headlight cop"?

Back in the good old days when one had to wait 3 months for their license to arrive in the mail prior to being able to operate on the air, novices ("newbies") did a *lot* of listening, and were able to learn the proper operating practices. By the time the license arrived, they knew the correct procedures and didn't have to be corrected on the air. The few who chose to be rebellious, found themselves with few QSOs.

That may, unfortunately, be his objective, but the same brush
people paint "no-coders" with, you paint "radio cops" with.
There is nothing wrong with "on air" corrections, when done in
a diplomatic and constructive manner.

>

John:
Had a similar problem in our home with the alarm. Seems when they
installed the alarm, all those
wires in the attic made or a great antenna. Ferrite cores did the trick.
I put one on every lead
going into the control unit. I also put a good ground rod near the phone
box outside and grounded
it. Last item was to take the 49mhz cordless phone and throw it in the
can. Seems that it was picking
up the RF and seding it into the phone lines. We now have 900 mhz unit,
with no problems.

Glad to hear you are working to clear this up with your neighbor. It
does'nt do the amateur community good when one sits back and tells the
neighbor 'not my problem'!

2991. GE MVP repeater

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-19 00:00:00 UTC
From: "Matthew W. Steger" <n3ntj@erie.net>
Message-ID: <33FA5AEA.CC8B97B2@erie.net>
Source record: 191561

Hello...

I found what 2 wires at the rear of the GE MVP UHF radio were for +12VDC (the two bottom wires near the back before they go into the small in-line filters). I ran the CAS, TX audio, RX audio, and PTT to a controller that I know works, and no RF out.
I performed all the mods according to the QRZ CD ROM mods, except for the heat compensation diode one at the end. Turning the radio on, the LED on the front does come on. I ran the 4 (CAS, TX audio, RX audio, and PTT) to the correct pins on the controller, and connected the duplexer/antenna to the radio, keyed up on the input and output frequencies, and still nothing. I plugged in the hand mike to the radio and the red LED on the front of the radio, does get brighter when I key up the radio's mike.

I cut the two traces on the SAS board, removed the antenna relay, connected a short coax jumper from pins (that I think are 4 and 7, as worded in the mods) and to the regular SO-239. I took out the RCA to RCA jumper from the radio and connected the coax from the rx side of the duplexer to the first RCA jack near the front of the radio (via 9913 coax and an RCA jack). I cut the connector that plugged into the filter board (which I believe fed DC to the antenna relay), since I removed the relay. There is no speaker plugged into the back (thru the same set of in-line filters as does the input DC power). The grounds from the same area are still connected to the side of the chasis and the power supply ground wire.

Nothing is happening...(RF output wise)...does anyone have any ideas????

I took the CAS, PTT, and Rx audio from the points that I was told to. I took the Tx audio from a pin in the upper left corner of the SAS board. I guessed on this based upon trying to trace the mike via the schematic. The only part of the schematic that I have is the SAS board.

If anyone can give me some suggestions/input, please email me @ n3ntj@erie.net

I don't know the distance they cover but Ramsey Electronics used to
sell a FM wireless Mic kit and I *think* Radio Shack has a
preassembled FM wireless mic. I don't know if Ramsey has a web page or
not but chose your favorite search engine and try them and Rad. Shack.

FWIW I've got a Ramsey FM wireless Mic kit that I bought in Dayton a
couple of years ago and have never assembled (I think it's still
around here somewhere) , if you're interested drop me some e-mail.

I have the following for sale:

1) Kenwood TL-922a amplifier, w/10meter mod. Absolutely beautiful condition. Full output. Have original box, manual, service manual. This amplifier is very nice and
NO I DO NOT SMOKE!!!!!!!!
I got a new amp and do not need 2 or I would keep it.
Asking $1,100 or I will take offers.

2) Kenwood TS-120s. This radio is in excellent condition and works very well. Has the large mobile bracket, hand mic, and power cord. Asking $350 or offers.

3) Gap Titan DX antenna. I just put up another tower and wife says something has to go, so this antenna is it. It is an excellent 80-10 meter vertical that I have been very happy with. The antenna is 4 months old and is still on its ground mount. I will bring it down and disassemble it for shipping. Asking $250.

Thanks for reading my post and reply to me at the E-mail address below.

Yes it needs the Kenwood PL board which is no longer available. I have two of
them. One with PL which is used for voice and the other w/o PL which makes a
great packet rig. It is possible you can get a third party PL board but it
will not be programmable from the panel.

OK James, let's go back to school for a minute.

First of all, take a look at the headers up at the top of your screen.
See the nice CEI.NET line on this posting? Now check the date.
Do you see it up there? I still have my account with CEI. Can you
say the same thing about bellsouth.net? ROTFL!

The Internet is a pretty big "place" so I don't know if you are really
in Georgia right now [even though KD4CDB is listed in Georgia]. You
could have moved to New York, and just not notified the FCC. You
might be phoning-in to your provider, although, from the tone of your
postings, you probably couldn't afford the toll charges. For that
matter, any of us could be "phoning-in" to our favorite provider.
Then again, maybe none of us are doing that.

Well, I hope that you took notes, since there will be a test on all of
this later.

Remeber Jimmie, appearances can be deceiving on the Internet, so
measure twice and cut once and don't take yourself or anyone else out
here too seriously.

True. I'm a fifth generation Republican, by my mother's side from the time when my great-great grandfather came from Prussia (Germany). However, I do too feel let down by the Republicans too. Man, here in Pittsburgh and Pennsylvania in general, they are backstabbing each other like crazy. In short, I tend to be populist conservative/libertarian on most issues.

> Freedom is slipping through our fingers and you and I know it.

I keep think 2000 will be it, but I said the same thing for 1992 and 1996 as well. We must work to change things this way.

> 2. We change our course with the blood of our politicians.

I really hate to see that happen but I think it will come to that if we continue the current course. My father thinks that's inevitable, been telling me since the 1970's. He seems to think that he might as well give up voting, hole up, and wait for the bullets to fly. I dunno, I hope we can accomplish change via option 1 because option 2, people will end up getting hurt or killed including the innocent. It's scary to think about.

> 3. We stay the course and loose our country to socialism, and very
> heavy handed government.

That's even scarier than option 2. However, we could be headed that way as long as people will continue to think that everything's OK as long as

they can hop into their Jeep Cherokee and rent "Barney" (ugh) tapes at their local Blockbuster. The Demopulicans seem only to give the people their "bread and circuses" to keep the people fat, happy, and dumb.

> to provoke an outlash against government.

Well, it could go that way if we continue to lose our good jobs via GATT, NAFTA, etc. because our leaders are deaf to the concerns of the average people along with the loss of our freedoms. What does this have to do with scanners? Well, it is relevant because our Constitution protects our freedom to listen, our freedom to pursue our hobbies and our lives in peace, and of course we need to have a better economy so that people can afford to buy those scanners, radios, and ham radios.
Chuck, just some thoughts......

Source record: 191576

rec.radio.amateur.misc
Visit KB8UYZ Amateur Radio at http://kb8uyz.com/.

Do you have a web site, and are wanting to increase your internet presence? Well we are now offering a new advertising opportunity on our Mars Global Surveyor Page. We currently offer advertising space, which you can purchase. But now, we are offering a "banner swap" program.

You will be advertised on our web site for free! In return, you must place our click-thru banner on your web site. This service will be available for a limited time only, so if you are interested, please reply to this email message.

Common questions

How will placing a banner on the DHC Mars Global Surveyor Page benefit my web site?
During the recent Mars Pathfinder Mission, our Pathfinder web site received over 29,000 hits. This was our first attempt at a large, popular web site. We offered no advertising on this page. We expect our Mars Global Surveyor Page to receive many, many more hits that this. We have already begun advertising this page and will continue to do so through September. You web site banner will have the potential of being viewed by over 30,000 people surfing the web!

How much does the "banner swap" cost?
The limited banner swap offer does not cost anything. It is absolutely free! The only thing we ask of you is that you place our banner somewhere accessible on your web site. Upon replying to this message, you will receive the proper html source code via email.

Where will my banner appear?
Your banner will appear in one of two places. It will either appear at the bottom of our Global Surveyor Page, with other banners or it will appear on a separate page dedicated to all the banners submitted to us.

What size should my banner be?
Your banner can be any size under 450x75 pixels and can either be .jpeg or .gif formats. Your banner can be animated or still. We would appreciate your banner to be 10k or under, but their are no limits.

Again, for more information, reply to this email message. To visit the Mars Global Surveyor Page, visit http://dhcom.com/mars. Beginning September 12, this site will be updated throughout the day, providing the latest news, information and photos from the Global Surveyor mission.

Thanks,
Dan Hicks Jr

THERE IS NO NEED TO SEND A REMOVE REQUEST.
We give you our guarantee that your name will not be sold or added to anyones E-mail lists.
//

- Do you feel like a "Star seed" ?

- Do you believe we are alone in this universe, or do you trust some higher form
of consciousness ? (whatever you call it God, Spirits, etc...)

- Or do you think it's possible that other dimensions try to help us?
(I'm NOT talking about UFO, but about spiritual entities)

If you do, please keep reading, if not just click on "delete" on your actual mail reader
and don't waste your time with this message.

you feel that sometime you'd like a "push" when you feel down or when the world
just seems to be a mess...you are not the only one!

Some sacred healing tool have been brought on this planet because of
the escalation of negative energy.

They carry very pure, very direct, very specific energy.
You can read some astonishing healing cases at these addresses:

http://www.spiraweb.com/yantra/Eyantra.htm

or :

http://www.spiraweb.com/yantra/Esable.htm

You can participate in this divine conspiracy, using and spreading these
powerful instruments. They do really work and help people re-balancing their
energy and think in a positive way.

People look for happiness, running after materialistic achievements,
but they find themselves with more and more stress, whatever is their social class.

The "push" come trough the purification of the subtle bodies, that lead the mind
to the state of "love the neighbourg as your self".

Love is in itself the best protection and the way toward happiness.

We share an opportunity not only to benefit from this energy but also to
spread the word for people who need powerful help to re-balance their
energy in this most difficult time.

Don't ask people to believe it with blind eyes,
just make them try it for a week and they will just feel like a new born baby!

if your are interested reply INFO after visiting the links above.

It can be an opportunity to establish very positive relationships with people you'll share this info with. They will just thanks you ! If you do something for people, you'll just get something positive back from it, not only on a financial level, because the law of "reap as you saw" is the law that rules everybodies' life from the" king "to the "slave"...

May Peace and Grace unfold in our lives,

Sincerely yours,
Mystic Man.

3012. Help! RFI to Burglar Alarm Problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-19 00:00:00 UTC
From: "John W. McCoy" <mccoys1@prodigy.net>
Message-ID: <33F93C12.752F1CCB@prodigy.net>
Source record: 191688
Cross-posted to: rec.radio.amateur,rec.radio.amateur.misc

I am trying to solve a serious RFI problem with the next door neighbor. Seems whenever I transmit
on 75M, their Brinks alarm system goes nuts, randomly blinking lights and beeping. Eventually the
thing thinks the panic button has been pressed. Next thing you know, the cops show up.

Here are the facts:

- Power is < 100 W from an IC-730
- Antenna is a Butternut HF6VX vertical
- ground mounted about 20 ft from the service entrance for all their AC, CATV, and phone
- about 300 ft of various length buried radials, tied together at a 3 ft ground rod 8" from feedpoint
- antenna seems to resonate and otherwis work well
- Xcvr is grounded to cold water pipe about 6 ft. away
- Feedline is about 120' of RG-213 which wraps around my house, mounted under the eaves

Have installed a LPF to combat the TVI they have also reported. So far, no more reports of TVI.
However, the LPF didn't seem to affect the TVI in our house, which was minor.

We also have minor
RFI to the phones at our house (15 and 20 meters). They report phone RFI on 20 meters only. Have tried the K-COM RF2 filter at several different spots (in my house only so far) with little effect.

My plan is tomorrow to try the K-COM filter at the their phone service entrance, hoping that the
phone line is the path to the alarm system. I'm skeptical, since they only report hearing
phone problems on 20 meters, and I on 15 and 20. I'm more suspicious that the sprawling network of
alarm sensor wires in their house is the better 75 M antenna.

I realize this is their problem, but if I can resolve it with minimal effort and expense, without a fight
with their alarm company, I will. Any suggestion would be appreciated. Thanks.

John

The past few mornings I have heard Radio Germany (Deutchland) on 27.2200 AM. Has anyone else ?????/ Maybe we should all get on 10m and try to "wake-up" the band ????

>stated my license was up for renewal and all I had to do was sign the
>bottem line and send it in, no 610 required. Sorry about your $6 YI.
>
>

The FCC is no longer sending out reminders and the short renewal
form. It discontinued the practice, and now unfortunately, W5YI may
be your only reminder. For those, who only have the W5YI reminder,
the form mailed into

FCC
1270 Fairfield RD
Gettysburg, PA 17325-7245

will renew for the 32 cents postage necessary to mail the form to the
FCC.

Also, as a side comment, if you read the rules implementing the
Vanity License Program, it sets a fee per ten year period rather
than one lifetime payment. That implies that when a vanity call
is renewed, it's pay for the next ten years.

>There are all sorts of newby habits which you, even with your short time
>in the service, have learned to avoid. So would "Jim", unless some "full
>of themselves" sanctimonious "Richard Cranium" chases them away first.

Hans:

One of my objections is that everyone's too damn thin-skinned these
days. Mr. Cranium may, in fact, be perfectly well-meaning. His
polite demeanor would indicate that to me immediately. The fact that
the "correction" was issued on-the-air just means he wanted it to
be given at a point where it would have the desired effect...that of
altering the newcomer's behavior. If the newcomer chooses to take
it personally and sell his toy HT, so be it...it's a free country. However,
Mr. Cranium will still be there.

Hans, years ago when the no-code concept was first being discussed,
those of us who were not in favor of it predicted that this kind of a
scenario would be just one of the many negative consequences. This
did not deter the forces of change for change's sake from dummying-
down the Amateur Radio Service. Well, the no-coders have made
their bed...so they'd better stop whining and lie down.

Had it ever occurred to "Jim" to take Mr. Cranium's advice to heart,
and perhaps, ask him for further "elmering?" THAT would be the
ultimate test of Mr. Cranium's motives!

As you know, I play "radio cop" too...and the amount of "elmering" I've
done far exceeds the number of "tickets" I've issued! But if the
professional "offense takers" are going to head for the Exit sign
at the first sign of trouble, good riddance!

Larry Roll clambered up on a soap box and said:

>Mr. Cranium may, in fact, be perfectly well-meaning. His
>polite demeanor would indicate that to me immediately. The fact that
>the "correction" was issued on-the-air just means he wanted it to
>be given at a point where it would have the desired effect...that of
>altering the newcomer's behavior.

I might be pleased if you were right, Larry, but unfortunately
Mr. Cranium is NOT well meaning. His sole objective is to
harrass newcomers, and the "desired effect" is "if your license
was issued after 1960, I want you off my ham bands". (Yeah, you
read it right -- 1960!) The guy has been licensed for 60 years
(really!) and has a terminal case of optirectitus(tm).

~~~
OPTIRECTITUS (op-ta-rekt-i-tis) The mood or personality
created or emoted by one whose optical nerve gets crossed
with one's rectal nerve and gives them a crappy outlook on life.
~~~

By the way, I met "Jim" for a beer last evening, and he interviews
here on Thursday for an open engineering position. Bright guy,
and we could use more like him in the amateur service. (And
it's interesting you pegged him as one of those dreaded "no
coders". What I deliberately neglected to mention is that he has
passed the 13WPM code and up to Extra written, so the license he
tore up was an Advanced.)

>Hans, years ago when the no-code concept was first being discussed,
>those of us who were not in favor of it predicted that this kind of a
>scenario would be just one of the many negative consequences.

You were years, nay decades, too late! My first license in
1957 was a "conditional" class, and of course there were guys like
you even then predicting all sorts of doom and gloom due to the
"dummying-down" by the new Novice, Technician, and those "damned
mail-order" Conditionals. It was a crock then, and it is still a
crock 40 years later.

>Well, the no-coders have made their bed...so they'd better stop
>whining and lie down.

Again, it is interesting that you jumped into your "no-coders"
whine-chant, when there weren't any "no-coders" under discussion.

73, de Hans, K0HB

~~~
You DON'T want to get into a whining match with Larry Roll, 'cause
he'll whup any of us six ways to Sunday. Larry whining is like
the monster truck rally of whining; Technician whining is like
a go-kart race in comparison.

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Loking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

3020. FS: PK-232MBX $110 (KDK radio, P.S., Mac extra...)

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-19 00:00:00 UTC
From: Mike Schwendeman <mikeats3@rconnect.com>
Message-ID: <33F9BB17.6E3D@rconnect.com>
Source record: 191696

I have an AEA PK-232MBX, by AEA. I am selling it due to lack of need/use. It is in perfect operating condition. I have all manuals, ans some assorted "extra" packet books.

You can see more info on the packet system at the following:
(-This is part of my web page)

http://homepage.rconnect.com/mikeats3/sale.htm

Just to bring you "up to speed" on this, and related, I will list a few points on the system I am offering, as follows:

==========
The unit started out as a PK-232. I purchased (and installed) the upgrade kit (at a cost of about $110.00) soon after I received it. This brought it up to the PK-232 MBX series, or level.

All software is included. Two manuals are included, one being the revision/change book, as the 'MBX offered a lot more "stuff", as compared to the original configuration.

I am selling, due to lack of use. I originally got into packet to communicate with a friend of mine, when he moved to South Dakota. He has now returned to Minnesota, so 2-meters is now doing the job.

Operationally, the unit works perfectly. (And still does.)
The unit is now on the air, on 145.050 Mhz. It is a "presence", but un-needed. (It is presently set up as a DIGIPEATER, if anyone has a need.).

The ROMs are by AEA. (This was part of the upgrade kit, mentioned above.) When I fire it up, I see the following:

AEA PK-232M DATA CONTROLLER
COPYRIGHT (C) 1986-1995
RELEASE 13.SEP.1995
VER. 7.1
PACTOR S/N 26192

I think I got this upgrade kit sometime in the previous spring, as I recall. (More than a year ago.)

I have all of the original documentation. I THINK I have the original box; not too sure...

- - - - - - - - - - - - - - - - - -

I can add another point on this system: I originally got into Packet to communicate (email) with a pal of mine, as I have described, above. I originally purchased a MFJ-1270B. It worked just fine. A friend of mine insisted in giving me this PK-232, as payment for some past repairs, etc. This was OK, but as received, it had no ACTIVE MAILBOX. (I had to leave the computer ON in order to be able to receive (and save) any email! I let it sit for a period, then decided to see just what all the hoopala was about these AEA units, and sent for the UPGRADE KIT, which had (among other features) the coveted mailbox function. I liked the AEA better, so sold the MFJ unit. That's where we sit. As I mentioned, I no longer have the need for this system, as I don't have the time, or need any longer. I do realize that this system has a lot of neat stuff to do for me, but I simply am not able to devote the time to this hobby any more.

The attached radio is a KDK 2033. It is synthesized, digital display (LCD), memories, scan, and all that. 20-25 watts, as I recall. Books included. It is modified (minimally) to mate to this packet unit. (It even employs a sense line to consider the squelch opening, as opposed to the more conventional "random timer" that is so commonly employed to avoid "collisions" of the transmitted data.) It has a touch-tone mic, and an "Astron" style power supply. All in perfect condition; all works and looks as new. $150.00 for the radio/power supply package.

-All wired, and working as a system at this time. (Remember? -I said that the system is on the air at this time.) No adjustments needed, the radio's normal VOLUME CONTROL is independant of the packet's audio input. (Nice to operate like this, as the volume control is normally the ADJUSTMENT device for the packet's input level...)
==========

So, as you can see (after digging your way through this LONG mess!), the package of the packet, radio, power supply just may be if interest to you.

Thanks! -Mike- K0JTA

Attitudes like this tend to make me very nauseous. From what I hear I would have to say the "radio cops" are totally ineffective in accomplishing anything other than boosting their very small egos at the cost of others.

In this case, I'm not so confident it is "their problem"......

Move the antenna, and re-engineer your ground.

Mounting a vertical antenna 20 feet from their service entrance
with only a 3' ground rod is an open invitation for problems. You
will benefit greatly from the old rule of squared functions here.

(IMHO)

73, Hans, K0HB/4ID

No surprise there....the majority of TVI problems are due to overlaod and
not harmonics.

> We also have minor
> RFI to the phones at our house (15 and 20 meters). They report phone
> RFI on 20 meters only. Have tried the K-COM RF2 filter at several
> different spots (in my house only so far) with little effect.

I've had that experience too. My best weapon against many RFI problems
has been ferrite rods and toroids. With TVI I had to put ferrite on
everything - the cable coming in, power cords of TV and VCR and cables
of any kind that went between the TV and the VCR. I also used a high
pass filter on the input to the TV and VCR. If any one thing was left out
there was little or no interference reduction.

Winding some of the phone cord around a small ferrite rod right where it
goes into the phone helped me a lot but wasn't 100% effective in all
on all phones. Don't miss the power cord on phones that plug in the wall.

As to the buglar alarm, you'll probbaly have to put a ferrite rod on
every cable that goes into the control box including power.

> My plan is tomorrow to try the K-COM filter at the their phone service
> entrance,

I'd be surprised if that does anything.

Good luck,

Chuck Vaughn - AA6G

: Thanks ....Rich

I've got a Radioshack Pro-2006, modified, that I am interested in
selling... I've just had no clue as to what a reasonable asking
price for it would be... actually I can't even remember what
I paid for it... so is the asking price above unreasonable..
I'm not quite sure from the comments here... what is the
going price for a very little used Pro-2006?

Any comments/offers are appreciated,

-douglas

: Paul DiSciascio (thenut@netaxs.com) wrote:
: : I am building a transmitter, and the schematics/plans that I acquired
: : say to make an inductor by wrapping enamel wire around a ferrite slug.
: : I have the wire, but I have been unable to find anything made of
: : ferrite, let alone something that might make a decent core. Any ideas?

: Take a look inside a junk TV set. You will find a fistful of slugs
: and ferrite cores.

That would work fine if you'r e building HF gear like ham equipment. But
most of the slugs in the TV set are not made for VHF FM band. If you use
the slugs from IF cans, they have too low Q at VHF or higher freqs.

And it would be okay to use the slugs out of a TV tuner, but it's doubtful
that they have any nowadays.

BTW you're a shameless crossposter, it's wrong to post to so many
non-relevant newsgroups.

Source record: 191585

If that SW broadcaster is pumping out a megawatt, a few watts of harmonic may be leaking out at 27.22MHz, and still be legal (still more than enough dB down from main signal).

Still means the 10 and 11 M :-) bands may be open.

This guy uses mindless phrases like "first personal" and tears up his hard-earned ticket the first time he runs into an asshole, and this is the kind of person we need in Ham Radio?

Pardon me of some parts of this oft-told tale of yours just don't seem to add up. "Jim" obviously spent some time on CB, if he goes around saying "first personal" when he means "name." There are at LEAST as many jerks on CB as there are on ham radio, and I'm being generous in my assessment here. So this fellow goes all the way from Novice to darn near Extra Class, runs into one obnoxious Old Fart on a repeater, and throws in the towel on the whole hobby? Good riddance, I say.

The fact is, Ham Radio, like Real Life, is not a gentle place. I ran into a lot of assholes when I started in ham radio, as did all of us. I didn't let them run me off. In fact, I was instrumental in running off a few of THEM, and changing the attitudes of some others.

>Again, it is interesting that you jumped into your "no-coders"
>whine-chant, when there weren't any "no-coders" under discussion.

And it's interesting that you posted this same fable word for word several months ago, if memory serves. How about some new material, whaddya say?

I purchased most of the antennas you mentioned above, and I can tell you
that the SR815 is just about as good as the original antenna that comes
with the FT-50R. (That's what I'm using it on)
It's the one that appears to be a whisker of an antenna. Wprks great. As

far as gain...it would be a fair argument. But anything has to be better than the tenny-tiny antenna you get with the VX-1R. I plan to get one in the next several weeks.

I just had to comment on this one...Did anyone notice how quiet the 20 meter band was on her radio. It was a Collins, but even with all of Collins' great filters--the band shouldn't have sounded THAT QUIET!

I agree with all of the above, so no need to repeat it here. Congrats to your friend, Mike!

I expect I'll repeat it again, the next time I hear a Kilocycle Kop climb up on their soapbox to chastise a newcomer, rather than quietly putting on their Elmer hat and helping out.

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text

you can say "ha ha" and of course on voice you would sound like an idiot

if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

Below is a perfect example of why Fidonet is dead. I recently decided
to venture to Fidonet to see if any life was left. A user was "banned"
from the HAM echo. He posted his plight to the AMATEUR_RADIO echo.
I observed echo rules. I posted a message saying that I had gone through
the same thing a few years ago, and I would e-mail him if he would provide
me with an address. (This was due to problems with routed netmail.)

However, Mr. Blake Bowers saw fit to send me the following piece of
netmail, nonetheless. You will note that in the original message he
quoted, he conveniently deleted the part where I said I would gladly
discuss this privately via e-mail with the other party. He knows very
well that it was there.

Also, he *claims* that he posted several requests to end the thread about
moderators. I posted only the one message and saw *no* such requests.
Only the threatening piece of netmail listed below.

Well, Mr. Bowers, I know you read this newsgroup. I will not be shut
up that easily. You knew damn well that I was willing to discuss things
in private. The fact of the matter is that you're too high on a power
trip of being a Fidonet moderator. It's people like you, along with other
moderators who have swollen heads, that have killed Fidonet.

Repeatedly, I asked that this thread be ended. You have posted
even though I have asked that this thread be ended, in public
messages, in the echo.

This is the last warning. Do NOT POST ANYTHING ABOUT MODERATION
of this, or any other moderator action from any echo, in the
AMATEUR RADIO echo.

WACARS - ACARS Reception and Decoding Software For Windows

WRACARS is an ACARS modem for a PC.

The software uses the PC's sound card receive ACARS
traffic from a suitable radio and then decodes it using the main processor.

The software is still very much Alpha code written as an excercise
in DSP and to brush up a bit of Windows programing.

Data from any packet with a valid header is shown top pane.
Corrupt packets are shown in the bottom pane.
Valid packets are sorted by aircraft registration on reception.
Airline flight numbers are interpreted and expanded if recognised.
There is also the beginings of message decoding. The airline companys
seem to use different message formats so decoding is limited
to expanding IATA and ICAO airport designators.

The decoded data can be save to a file for later inspection of appended to the
end of an existing log file. The saved file uses tab characters to delimit the
fields so it can be process easily.

REQUIREMENTS:

PC with Windows 3.1 of later,
The program needs quite a bit of horsepower.
It's only run on my P150 so far so I don't know
The minimum CPU spec.

Soundcard capable of recording at 19.2 KB/sec,
This is a non-standard rate. It's only been tested
on my SB16.

Radio receiver with audio cable for connection to soundcard.

LICENSE:

WACARS v0.1 is FREEWARE. This software may be freely copied and distributed providing that the program and accompanying files are not modified in any way without prior written permission of the author. Any charges made for distributing this software may not exceed that of the cost of the distribution media. You are granted a license to use this software providing you accept the disclaimer below.

DISCLAIMER:

Although this product has been tested by the author, he accepts no responsibility for any damages caused by the use or misuse of this software. This software is distributed 'as is' with no warranty expressed or implied. The author will not be responsible for any losses incurred, either directly or indirectly, by the use of this software. Use this software entirely at your own risk. If you do not agree to these terms then you must not use this software.

INSTRUCTIONS:

1. Install Software. wacars.exe goes where ever you like. Acars.dat needs to go into your Windows directory.

2. Connect the audio for you radio to the line-in of your sound card.
Tune to an ACARS frequency and turn the squelch right off

3. Use the Windows mixer utility to adjust the recording sound level.
About 1/2 maximum when a signal is present seems about right.

5. Start Program

Data from any packet with a valid header is shown top pane.
Corrupt packets are shown in the bottom pane.

Click To Down Load Program File

Click To Down Load Database File

I bought an R-7000, and I mounted it on a 12' piece of pipe that had the lower 4' sunk into a concrete deadman. This put the base of the R-7000 at the recommended 8' above ground. I did everything that I could do to get the antenna tuned so that it was centered on each of the bands 40 through 10. What I was able to realize both in SWR in-band and in band centering left a lot to be desired. I felt that the antenna was not capable of meeting the specifications that were advertised. I requested a replacement from Cushcraft in the form of a 1 for 1 trade to the older R-7 design. I have been satisfied that the R-7 performs as advertised so far as tuning considerations and power handling (I run 1500 watts p.e.p.). However, for the distances at which I normally communicate on 40 meters (300 mi to 1200 mi.) I don't think it is as good as a dipole at 40 feet. The dipole almost always gives me a full S unit better signal at the other end of the QSO. For reception it's about the same story except that there's usually more man made QRN received by the vertical than the dipole. I believe that's a well understood and accepted phenomena due to polarization of man made noise.

3069. Q-Signals .. Long Listing

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-21 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <872187584.17054@dejanews.com>
Source record: 191474

QRA What is the name of your station?

The name of my station is ...

QRD Where are you bound for and where are you from?

I am bound for ... from ...

QRB How far approximately are you from my station?

The approximate distance between our stations is ... nautical miles
(or kilometres).

QTH What is your position in latitude and longitude (or according to any,
other indication)?

My position is ... latitude, ... longitude
(or according to any other indication).

QTN At what time did you depart from ... (place)?

I departed from ... (place) at ... hours.

QRI How is the tone of my transmission?

The tone of your transmission is ...

1. good
2. variable
3. bad.

QRK What is the intelligibility of my signals (or those of ...)?

The intelligibility of your signals (or those of ...) is ...

1. bad
2. poor
3. fair
4. good
5. excellent.

QRO Shall I increase transmitter power?

Increase transmitter power.

QRP Shall I decrease transmitter power?

Decrease transmitter power.

QSA What is the strength of my signals (or those of ...)?

The strength of your signals (or those of ...) is ...

1. scarcely perceptible
2. weak
3. fairly good
4. good
5. very good.

QSB Are my signals fading?

Your signals are fading.

QRQ Shall I send faster?

Send faster (... words per minute).

QRR Are you ready for automatic operation?

I am ready for automatic operation.
Send at ... words per minute.

QRS Shall I send more slowly?

Send more slowly (... words per minute).

QSD Is my keying defective?

Your keying is defective.

QRM Are you being interfered with?

I am being Interfered with

1. nil
2. slightly
3. moderately
4. severely
5. extremely

QRN Are you troubled by static?

I am troubled by static

1. nil
2. slightly
3. moderately
4. severely
5. extremely

QRG Will you tell me my exact frequency (or that of ...)?

Your exact frequency(or that of ...) is ... kHz (or MHz).

QRH Does my frequency vary?

Your frequency varies.

QTS Will you send your call sign for tuning purposes or so that
your frequency can be measured now (or at ... hours)
on ... kHz (or MHz)?

I will send my call sign for tuning purposes or so that my
frequency may be measured now (or at ... hours) on ... kHz
(or MHz).

QSN Did you hear me (or ... (call sign)) on ... kHz (or MHz)?

I did hear you (or ... (call sign)) on&#65533;... kHz (or MHz).

QSS What working frequency will you use?

I will use the working frequency ... kHz(normally only the
last three figures of the frequency need be given).

QSU Shall I send or reply on this frequency (or on ... kHz
(or MHz)) (with emissions of class ...)?

Send or reply on this frequency
(or on ... kHz (or MHz)) (with emissions of class ...).

QSV Shall I send a series of Vs on
this frequency (or ... kHz (or MHz))?

Send a series of Vs on this frequency
or ... kHz (or MHz)).

QSW Will you send on this frequency (or
on ... kHz (or MHz)) (with emissions of class ...)?

I am going to send on this frequency (or on ... kHz
(or MHz)) (with emissions of class ...).

QSX Will you listen to ... (call sign(s))
on ... kHz (or MHz)?

I am listening to ... (call sign(s))
on&#65533;... kHz (or MHz).

QSY Shall I change to transmission on another frequency?

Change to transmission on another frequency (or on ...
kHz (or MHz)).

QRL Are you busy?

I am busy (or I am busy with ...).
Please do not interfere.

QRV Are you ready?

I am ready.

QRX When will you call me again?

I will call you again at ... hours
(on... kHz (or MHz)).

QRY What is my turn?

Your turn is Number ...
(or according to any other indication).

QRZ Who is calling me?

You are being called by ...

QSC Are you a cargo vessel?

I am a cargo vessel.

QSR Shall I repeat the call on the calling frequency?

Repeat your call on the calling frequency; did not
hear you (or have interference).

QTQ Can you communicate with my station by means of the
international Code of Signals?

I am going to communicate with your station by means
of the International Code of Signals.

QUE Can you use telephony in ... (language), with interpreter
if necessary; if so, on what frequencies?

I can use telephony in ... (language)
on ... kHz (or MHz).

QTR What is the correct time?

The correct time is ... hours.

QTU What are the hours during which your station is open?

My station is open from ... to ... hours.

QRC By what private enterprise (or state administration) are
the accounts for charges for your station settled?

The accounts for charges of my station are settled by
the private enterprise ... (or state administration).

QSJ What is the charge to be collected to ... including your
internal charge?

The charge to be collected to ... including
my internal charge is ... francs.

QRW Shall I inform ... that you are calling him on ... kHz
(or MHz)?

Please inform ... that I am calling him on ... kHz
(or MHz).

QSO Can you communicate with ... direct (or by relay)?

I can communicate with ... direct (or by relay through ...).

QSP Will you relay to ... free of charge?

I will relay to ... free of charge.

QSQ Have you a doctor on board (or is ... (name of person) on board)?

I have a doctor on board (or ... (name of person) is on board).

QUA Have you news of ... (call sign)?

Here is news of ... (call sign).

QUC What is the number (or other indication) of the last message you received from me (or from ... (call sign))?

The number (or other indication) of the last message I received from you (or from ... (call sign)) is ...

QRJ How many radiotelephone calls have you to book?

I have ... radiotelephone calls to book.

QRU Have you anything for me?

I have nothing for you.

QSG Shall I send ... telegrams at a time?

Send ... telegrams at a time.

QSI I have been unable to break in on your transmission.

QSK Can you hear me between your signals and if so can I break in on your transmission?

I can hear you between my signals; break in on my transmission.

QSL Can you acknowledge receipt?

I am acknowledging receipt.

QSM Shall I repeat the last telegram which I sent you (or some previous telegram)?

Repeat the last telegram which you sent me (or telegram(s) number(s) ...).

QSZ Shall I send each word or group more than once?

Send each word or group twice (or ... times).

QTA Shall I cancel telegram number ...?

Cancel telegram number ...

QTB Do you agree with my counting of words?

I do not agree with your counting of words,
I will repeat the First letter or digit of
each word or group.

QTC How many telegrams have you to send?

I have ... telegrams for you (or for ...).

QTV Shall I stand guard for you on the frequency
of ... kHz (or MHz) (from ... to ... hours)?

Stand guard for me on the frequency of ... kHz
(or MHz) (from ... to ... hours).

QTX Will you keep your station open for further communication
with me until further notice (or until ... hours)?

I will keep my station open for further communication
with you until further notice (or until ... hours).

QRE What is your estimated time of arrival at ...
(or over ...) (place)?

My estimated time of arrival at ... (or over ...)
(place) is ... hours.

QRF Are you returning to... (place)?

I am returning to ... (place).
-OR-
Return to ... (place).

QSH Are you able to home on your D/F equipment?

I am able to home on my D/F equipment(on station ...).

QTI What is your TRUE track?

My TRUE track is ... degrees.

QTJ What is your speed?

My speed ... is knots
(
QTK What is the speed of your aircraft in relation to the
surface of the Earth?

The speed of my aircraft in relation to the surface of
the Earth is ... knots (or ... kilometres per hour
or ... statute miles per hour).

QTL What is your TRUE heading?

My TRUE heading is ... degrees.

QTM What is your MAGNETIC heading?

My MAGNETIC heading is ... degrees.

QTN At what time did you depart from ... (place)?

I departed from ... (place)at ... hours.

QTO Have you left dock (or home)?
-OR-
Are you airborne?

I have left dock (or home).
-OR-
I am airborne.

QTP Are you going to enter dock?
-OR-
Are you home?
-OR-
Are you going to alight (or land)?

I am going to enter dock
-OR-
I am home.
-OR-
I am going to alight (or land).

QUG Will you be forced to alight (or land)?

I am forced to alight (or land) immediately.
-OR-
I shall be forced to alight (or land) at ...
(position or place) at ... hours.

QUJ Will you indicate the TRUE track to reach you (or ...)?

The TRUE track to reach me (or ...) is ... degrees
at ... hours.

QUB Can you give me in the following order information concerning:
the direction in degrees TRUE and speed of the surface wind,
visibility, present weather; and amount, type and height of
base of cloud above surface elevation at ... (place of
observation)?

Here is the information requested: ...
(The units used for speed and distances should be indicated.)

QUH Will you give me the present barometric pressure at sea level?

The present barometric pressure at sea level is ... (units).

QUK Can you tell me the condition of the sea observed at ...
(place or coordinates)?

The sea at ... (place or coordinateS) is ...

QUL Can you tell me the swell observed at ... (place or coordinates)?

The swell at ... (place or coordinates) is ...

QTE What is my TRUE bearing from you?

Your TRUE bearing from me is ... degrees
at ... hours.

QTF Will you give me the position of my station according to the
bearings taken by the D/F stations which you control?

The position of your station according to the bearings taken
by the D/F stations which I control was ... latitude, ... longitude

QRT Shall I stop sending?

Stop sending.

QUM May I resume normal working?

Normal working may be resumed.

QUD Have you received the urgency signal sent by ...
(call sign of mobile station)?

I have received the urgency signal sent by ...
(call sign of mobile station) at ... hours.

QUF Have you received the distress signal sent by ...
(call sign of mobile station)?

I have received the distress signal sent by ...
(call sign of mobile station) at ... hours.

QSE What is the estimated drift of the survival craft?

The estimated drift of the survival craft is ...
(figures and units).

QSF Have you effected rescue?

I have effected rescue and am proceeding to ... base
(with ... persons injured requiring ambulance).

QTD What has the rescue vessel or rescue aircraft recovered? ...

(identification) has recovered ...
1. ... (number) survivors
2. wreckage
3. ... (number) bodies.

QTW What is the condition of survivors?

Survivors are in ... condition and urgently need ...

QTY Are you proceeding to the position of incident and
if so when do you expect to arrive?

I am proceeding to the position of incident and expect
to arrive at ... hours (on ... (date)).

QTZ Are you continuing the search?

I am continuing the search for ... (aircraft,
ship, survival craft, survivors or wreckage).

QUI Are your navigation lights working?

My navigation lights are working.

QUO Shall I search for ...
1. aircraft
2. ship
3. survival craft
in the vicinity of ... latitude, ... longitude
(or according to any other indication)?

Please search for ...
1. aircraft
2. ship
3. survival craft
in the vicinity of ... latitude, ... longitude
(or according to any other indication)?

QUP Will you indicate your position by ...
1. searchlight
2. black smoke trail
3. pyrotechnic lights?

My position is indicated by ...
1. searchlight
2. black smoke trail
3. pyrotechnic lights.

QUQ Shall I train my searchlight nearly vertical on a cloud,
occulting if possible and, if your aircraft is seen,
deflect the beam up wind and on the water (or land) to
facilitate your landing?

Please train your searchlight on a cloud, occulting if
possible and, if my aircraft is seen or heard, deflect
the beam up wind and on the water (or land) to facilitate
my landing.

QUR Have survivors ...
1. received survival equipment
2. been picked up by rescue vessel
3. been reached by ground rescue party?

Survivors ... 1. are in possession of survival equipment dropped by
... 2. have been picked up by
rescue vessel 3. have been reached by
ground rescue party.

QUS Have you sighted survivors or wreckage?
If so, in what position?

Have sighted ...
1. survivors in water
2. survivors on rafts
3. wreckage
in position ... latitude, ... longitude
(or according to any, other indication).

QUT Is position of incident marked?

Position of incident is marked by ...
1. name or smoke float
2. sea marker
3. sea marker dye
4. ... (specify other marking).

QUU Shall I home ship or aircraft to my position?

Home ship or aircraft ... (call sign) ...
1. to your position by transmitting your call sign and long dashes
on ... kHz (or MHz)
2. by transmitting on ... kHz (or MHz) TRUE track to reach you.

QUW Are you in the search area designated as ... (designation
or latitude and longitude)

I am in the ... (designation) search area.

QUY Is position of survival craft marked?

Position of survival craft was marked at ...
hours by ...
1. flame or smoke float
2. sea marker
3. sea marker dye
4. ... (specify other marking).

QTT The identification signal which follows is superimposed on
another transmission.

Has anyone stopped to think that maybe Jim did listen in before
getting into any QSO's? Is it possible the "radio cop" was not around
to chastise the folks that Jim heard talking? Hmmmmmm?

3074. solar minimum

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-21 00:00:00 UTC
From: ianls@patrol.i-way.co.uk
Message-ID: <33fc8840.3606173@news.i-way.co.uk>
Source record: 191479

What actually defines the solar minimum? Cycle 23 is now calculated to have started in May 96, but minimum sunspots occurred about October 96. Is it when the new spots (of different magnetic polarity) out number the old spots? Or is it when the new spots first appear in the expected place (ie +/- 30 degees approx) though I think the first new spots appeared in _1995_ but in the 'wrong' place!
Thanks,

3075. Swap near Boston?

Well, I visited QRZ and pulled up the mug shot for KD4CDB. There he was, ol' endomorphic Jimmie. Really James, you should try to get in shape. Reminds me of the scene in Wizard of OZ where Dorothy pulls back the curtain and exposes the "wizard" -- just a tired old man. And, to think that he made such macho threats when he was with bellsouth.net. ROTFL !!

I have no argument with your assessment of the local jerk. I only
question the accuracy of your story that this fellow "Jim" tore up his
ticket just because of this one incident. The story has a lot of
holes in it, which leads me to believe that you've embellished it a
bit to make a point.

I posted on this topic the last time you raised it. Go back and read
what I said then.

Yes, some salespersons are hams, but does Radio Shack have any obligation to make you whole if you run into one of them. I recently had a bad experience with Radio Shack. A sales representative sold me a computer and told me that there would be no interest for the first year. We later found out that we were indeed responsible for the accrued interest. Customer service said that the salesperson was correct in stating that there were no finance charges the first year, that this is "common verbiage," and that it is NOT necessary that he tell us that the finance charges were DEFERRED. We contested it with Radio Shack and with their finance company to no avail. Now, not only are we responsible for the almost $500 in accrued finance charges, but we re responsible for the near-usury 25% rate on the balance plus accrued charges. I feel this is a classic example of bait-and-switch and I feel that Radio Shack and its finance company are saying that it s OK for their sales people to NOT tell its customers the whole truth. The moral of the story: "Let-the-buyer-beware!!!"

Is this a case of a salesperson that is a ham, or is it somehting else.
You can make your own call.

This is a common problem with several radio related Fidonet echos.

I believe you are correct, they are killing fidonoet with their
attitude.

You should have seen what happened when Bill Cheek took over the
Scanradio echo. From 50 posts a day to 5 or 10.

Well, it's finally ready to go!

Running on Wildcat 5.0 with a 16 node license, Ham Radio Connection is ready to accept your connections. 12 nodes for HTTP/Telnet/Wildcat Navigator and 2 nodes for FTP. Over 10 Gig of files online. Online Chat and Message services.....And especially for Ham Radio Operators.....WinFBB7.00 Packet Radio...Via Telnet from the internet and to the Outside world via Amateur Radio in the Michiana Area. This should prove to be a very interesting site to visit as things begin to get off the ground.

Currently the site is operating using a 28.8k dial-up connection. Please access the page at http://members.tripod.com/~n9sbv/status.htm to gain access to the site.

hope to see you there....73's de n9sbv..

---------- Forwarded message ----------
Date: Wed, 20 Aug 1997 16:29:16 -0500

We would be grateful for your support in publicizing this event,
to all your members, and particularly to any members of your
sections who might be Air Force veterans or retirees. It looks
to be an exciting event.

It will appear in full in the September QST.

Thanks and 73,
Bernie Skoch
Colonel, USAF
K5XS

AIR FORCE 50TH ANNIVERSARY QSO PARTY

Sponsored by the Director of Communications and Information,
Headquarters, United States Air Force in celebration of the
formation of the United States Air Force on September 17, 1947.

Dates/Times: Weekend, 0001Z 20 September 1997 to 2359Z, 21
September 1997.

Participants use special identifier as follows:

If operator is an Air Force member (active duty, Air National
Guard, or Air Force Reserve), a veteran, or a retiree), station
ID's with "AF" followed by a point value based on the year the
operator was first in the Air Force (active, guard, or reserve).
Point value is determined by subtracting the year the operator
first entered active, guard, or reserve status from 1997.
For example, a retiree who first entered active duty in 1957 would have a
point identifier of 40 (1997-1957=40) and would ID with point suffix
"AF40." A veteran who was on active duty when the Air Force was formed
(1947) would have a value of 50 (1997-1947=50) and would ID with point
suffix "AF50." An active Air Force member who entered active duty in 1986
would have a value of 11 (1997-1986=11) and would ID with a point suffix
of
"AF11."

If operator is not an Air Force member, veteran, or retiree,
station ID's with "AF1."

Exchange: Callsign, point suffix, and signal report (E.g.-
CW/Digital: "K5XS/AF23 599" Voice: "K5XS slant A.F.
twenty-three, five-by-nine")

Operating frequencies and modes: All bands, all modes.
Preferred frequencies are those ending with "50" (3550, 7050,
7250, 14050, 14250, 21050, 21350, 28050, 28550 khz, etc.)

Multiple Contacts: Contacts may be made with each other station once on each band and mode.

Scoring: Score contacts based on suffix. (E.g.-Contact with
station with "AF50" contact is worth 50 points, "AF20" 20
points, etc.). Add total scores.

Logs: Logs MUST include times of operation, each worked
station's callsign and point suffix and MUST have point suffixes
totalled by page to be accepted. Neither accepted nor
non-accepted logs will be returned unless suitable SASE
submitted with log.

Awards: Plaque to overall winner. Air Force 50th Anniversary
certificates to top three scorers in each U.S. state and each
other country. Submit SASE for copy of award winners by state
and country.

Mail logs to: K5HOG-Razorback Radio Club
604 Julian Avenue
Hickam Air Force Base
Honolulu, Hawaii 96818 USA.

Contact: Bernie Skoch, Colonel, USAF, K5XS, e-mail:

I'm thinking about purchasing this radio and was look for any comments or experiences anybody might have.

My requirements are:
Dual VHF/VHF receive at the same time
Rx/Tx @ 170Mhz, 143Mhz and 463Mhz
5 Watts

It's got a lot of nice features and feels quite sturdy.

Please email your comments to: brucelee@thepentagon.com
Thanks

3093. Icom A3 or A22 external microphone wiring please

Date: 1997-08-22 00:00:00 UTC
From: Keith Pickersgill <keithp@iafrica.com>
Message-ID: <01bcaeda$dcad9c00$46531fc4@p200>
Source record: 191498

I am trying to build a microphone, PTT and speakers into a helmet to use on an
Icom A3 or A22 airband radio.

Does anyone know how to wire the mic and PTT ?

I tried all the systems that work on the Icom Ham handhelds, but this seems to be a different design.

It seems I need an external switching transister and a couple of resisters.

Please reply direct to my email, keithp@iafrica.com, as I do not read this newsgroup often.

Many thanks for any help.

>Thanks,

It's kind of a combination of these. You can't tell from just a few days or weeks of data, you have to look at many months of data for a pattern. Seeing the NEW spots is an indication that the new cycle has started but it doesn't mean the old is finished. They do overlap. The new cycle has begun though and activity is VERY slowly going up.

>cutesy nonsense words and phrases.

Glen:

Well said -- I totally agree. This desire to make up cutesy new words where the old ones would do nicely is a classic example of CB-culture invading ham radio via the no-clue "Technician" class.

The people who use such language are the low-intellect, blue-collar, mouth-breathing ex-CB'ers Mike Diegnan spoke about in the "Expand Tech+" thread. They are giving ham radio the same "redneck culture" that made CB a joke...and I don't like it one little bit.

The joke is that we're supposed to treat these "newcomers" to ham radio with patience, kindness, and "elmering?" We're not allowed to "criticize" their CB-lingo on-the-air? Yeah, right. I say, the only thing more ignorant than using CB-lingo on the ham bands is to sit back and let it happen! If people are going to come into ham radio thinking it's the same kind of chaotic mess they found on CB, and use the same language, then they deserve what they get when someone like me let's 'em have a dose of "radio cop." And if they end up getting out of ham radio for good, so much the better.

Ham radio is supposed to be something better, more civilized, more thoughtful, and more "professional" than CB. I will not tolerate anyone who tries to destroy ham radio with CB-like behavior.

I'm looking for a mail-order house from which I can buy large inductors. I need a few inductors from 5mH to 25mH, 1 amp, min.

Any help would be greatly appreciated. Direct e-mail replies, doubly so.

Thanks.

Enjoy,
Dave

Tim, I think this might be a geographical thing. I obtained my Novice ticket whilst stationed in Biloxi, Mississppi in the early 80's. I took eight months to go from Novice to General and I never experienced anyone not wanting to talk to me because of my newness to the hobby or the age of my upgrade.

I will say, in my travels around the country...the least friendly repeaters were around the Dover, Delaware area.

From Mississippi I moved to New Hampshire and did not experience this there. I went to Korea for a year....and did not experience it there. I went to New Mexico from Korea. Spent three years in Alamogordo and did not experience it there.

I'm sorry for your bad experiences but I guess mine were from the flip-side of the coin. I was very heavily involved with emergency services, community assistance, and teaching the hobby..maybe that is why I never saw it. I can't say there were no personality conflicts along the way but we worked things out and my experience with ham radio has been 99% positive.

>I think everyone was afraid if they made a new friend and the gang

I was yelled at once during a contest because I had my mic gain set a little high. I lowered it and pressed on. Although I may become smart-alecky in the newsgroups I have a totally different personality on the radio. I believe and hope we all do.

Yep. Many HTX-202s do. Mine does.

> It creates about a 2 S-Unit reading.

Mine's not quite that high, but it's still there. I get more CATV
leakage on 145.25.

> Any ideas?

Buy another radio? Seriously, if you have a local repeater
on 146.76 that is important for you, you'll either have to live
with the birdie, or get another radio.

The new catalogs are here. New scanners including a "Trunk Tracker".
No cost but you are limited to one per customer (sales receipt, part #
is 68-1998).

Also new catalog "TECH America". Lots of parts, test equipment, scanners
and Standard amateur gear. At Radio Shack, $2.95 but get $3 back on
first order. If you call (800-877-0072) or use their web page
(www.techam.com), it is free. Operators are very helpful.

If three meters is all you can use there's not much you can squeeze out.
Extending an antenna electrically does not increase gain. another way of
saying this is for a given freq a 1/8 wl loaded to 1/2 wl is not going to
have any more gain than an1/8 wl antenna loaded to 1/4,

Jim

I want to second the above opinion. Although its been a few years now, I
sent my FT 757 in to Yaesu Factory service in Cerritos and received excellent
and timely service. I am a professional mobile radio technician of over 20
years experience and after initial investigation of my radio I decided to send
it to these experts on this unit. I have no regrets. They replaced multiple
parts in the receiver front end and did allignment checkout. For the $60.
they charged me I know I was treated fairly.

I've got a 7-AH gel cell for emergency use with my HT; a time
or two a year, I'll trickle it by attaching it to the little
wall-cube charger for the HT's nicad pack. It's not much current,
so it's nice and gentle; I leave it hooked up for a day or two
and the gel cell appears to be nice and charged afterwards.

This is NOT the slick professional way to do it, you might guess.
But it seems to work for me, and it didn't cost anything but a
few items from the junkbox for the connections. GL, and I hope
you get some better advice on this than mine. :-) 73!

I recently went to the first "Tech America" store which is located in Denver.
I was impressed, it has been a long time since I have seen a store stocked
with such an array of electronics parts and gadgets.

I was not asked for my phone number.

The sales staff was helpful and not pushy, most even seemed fairly
knowledgable about what they were selling.

The catalog is marvellous and I understand a new one is due out soon and is
three times bigger than the current one.

I don't live in Denver but I'll go back.

More Tech America stores are due in Atlanta and Dallas and other locations in
the future.

Very interesting. Just two days ago I talked to the Radio Shack media relations
guy about whether radio shack would be coming out with a TrunkTracker scanner. He said they might, eventually. Would appear he is in the same league as the sales people in not know the product line.

Source record: 191629

Hi ...

I found a new SAS board and put it in the MVP, and it still doesn't work. The tx LED is on when the power is turned on, but goes to full intensity brightness when the PTT is keyed. There is no RF output as well.
I don't have any manuals on the radio and am out of ideas. I may have to try to find another UHF radio. I am not getting anywhere on this project. :-(
I don't know where there should be what voltages. Across the voltage regulator, there is more than +10V. Same thing with the other SAS board.
If you have any ideas, please let me know.
Know of anyone with an inexpensive GE Master II Exec or MVP or something I can use?

Concerning handhelds, and radios in general, the range is very much controlled by the surrounding terrain, antenna and power, with power, seemingly, being the lesser of the three (within reason). Over open water you should be surprised at the distance you will get. Most amateurs are very surprised at the extra distance they get with handhelds over open water. The specific distance will be anyones guess but with 1 watt on marine and a rubber ducky, I would be too worry. Start out using the lowest power setting, for battery conservation, and only use high power when needed. Note: When you get the radios 'ask' if you can get the longest rubber ducky antennas possible. Don't get super small antennas and expect looonnnnggg range. Remember antenna length, the closer you get the quarter wave the better, is the critical feature as well as open water. Power is you least important concern. (sorry for being wordy)

Not yet, but it's close. If the majority of US hams are like those in my radio club, Amateur radio is in big trouble. All the old geezers do nothing but whine, and if some young guys want to move in a progressive direction, they cry foul. An example: Our repeater SUCKS, we pick up every one and their brother, I enquired about putting a PL tone on the machine, and point blank was told NO, THE OLD FELLAS DON'T HAVE MODERN EQUIPMENT! These geriatric hams are almost all extra class, and bicth that the new Tech hams are killing the hobby. Well put some of that EXTRA CLASS KNOWLEDGE WHERE YOUR RIG IS!, spend $40 and put a tone board in, or better, don't associate with us low class hams, and stay on HF. With those relics gone, we could really sell ham radio to young kids and techno-freeks (Who might have some great ideas for our future.)

Let me know when the funeral is.

-
Here is a summary of news items covered on edition #230 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 29-Aug:
-
1. FCC Adopts 1X1 Special Event Call Sign Plan, VECs Participate
2. Three ARRL Directors to Face Election Opposition This Fall
3. League Announces Section Manager Election Results
4. FCC to Start Issuance of Gate 3 Vanity Call Signs
5. Special Event Station Calendar
6. MARS Recants on CW Issue, Even Informal Use Still Banned
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. Canadian VBX Balloon Launch Successful, Balloon Still Missing
10. E.F. Johnson Sold, Former Manufacturer of Amateur Equipment
11. "The RAIN Dial-up" from Chicago
12. "Ancient Amateur Archives" with Bill Continelli, W2XOY
13. Imported Cellular Telephone Offers "CQ" Ring Pattern in CW
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
courtesy of the Niagara-Mohawk Amateur Radio Club. The program is
repeated Mondays at 8:00 PM.
```

-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

Well I used to have a local BBS with fidonet. But the internet took
most of the callers with it. So due to lack of use I took it down. I
don't even call any local BBS anymore. I only use the Internet. FIDONET
and BBS day's our over. ANSI just don't have the power that internet
has. I know there are still local BBS. But not like in the old days.
Just like CB, Ham, Ect. better things come a long. Internet is more FUN!

I can't find the original posting but, 'no' amateur radio is not
dying. Like a lot of other interests, amateur radio is in a constant
state of change. During the early/mid 70's amateurs were changing
from hf to vhf. During the mid/late 80's, amateurs were looking into
packet. During this last few years amateurs, I suspect, have been
looking around for another interest.

I suspect that many amateurs are just looking around for the next
technology. Plus they could be back onto cw. I think a lot of
amateurs are getting tired of vhf voice and packet and are looking for
the next challenge.

Perfect for a portable Packet Station!

Toshiba, T4400 notebook, with upgraded CPU (486DX2-50). VGA mono screen, 120mb hard disk, 6meg ram, internal Fax/data modem, 3.5 floppy. It has Windows 3.1 installed.

It has com port, parallel port, and PS2 mouse port on rear.

The machine is in outstanding condition. (Non smoking environment)

I have the manual and charger. Asking 395.00.

Let's negotiate shipping method, if interested.

Thanks MikeN..... N6HTY

I have a 100AH in the shack as backup for the radios. I have it wired across
my Astron supply which is set for 13.7 volts. Been that way for years w/o any
problems. You do not want to exceed 14.1 volts for a 12v gel for any extended
period of time.

Michael, recharging a gel cell is the same as a lead acid battery. For a 12 volt gel cell you can float it forever at 13.3 to 13.6. You can fast charge at 14.5.

A simple 12 volt battery charger will work fine. Buy one at the local auto store or make one from a 12 volt ac transformer, LM317 adjustable regulator and some resistors...diagrams for these are in the Mags all the time.

sigh Another illiterate who cannot type a simple sentence without multiple errors in grammar, spelling, and usage. Typical of amateur radio today; the ones who whine the loudest about the no-code Techs not being "real hams" because they are not skilled in the obsolete art of banging two pieces of metal together in an ancient communications ritual are themselves unable to use a modern computer to compose a basic sentence on the Internet.

Also too cheap to purchase his own Internet access, as evidenced by the Juno return address. Again, typical.

If this represents the intellectual level of the average amateur radio operator today, perhaps the bands would be better utilized by the commercial interests who want to acquire them and are willing to make major contributions to the United States Treasury, thus reducing our enormous budget deficit, in order to do so.

Hi
Thanks for reading this msg.

I came across an artical in one of the Radio Mags
(but can not remeber which one)
the artical gave details for rx geo weather sats 1.6ghz
converter.
By taking out the tuner of a bsb or dmac sat rx
(can not remember which) and building a discone
with a couple of preamp built into the discone.
the tuner has a 137mgz out put which is then connected
to a wide band rx.
i did have all the papper work which i have lost
the mag did do a follow up to build a rx to rx 137mhz
what i require is the name of the mag to get a back
issue or a photo copy
thanks again
Poul G7BTP

SB DX @ WW $OPDX.319
Ohio/Penn DX Bulletin No. 319

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 319
BID: $OPDX.319
August 25, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & WB2RAJ THE 59(9) DXReport, K4FXN, WA4JQS, AC7DX, WT0Q, CO3CL, DJ2BW, DJ5AV & DX News Letter, JA1QGT, ON6TT, PA3CSR, PS7AB, UA9KM, VK4LM, VK1AUS, VK4FW and ZS4Y for the following DX information.

SPECIAL NOTE: OPDX Bulletin #318 contained information supplied via "Joe and Tam BV/N0IAT." Although an appropriate credit was made at the top of the bulletin, Joe Fitter, BV/N0IAT has claimed that the information he supplied was copyrighted and was used "in violation of Federal law". As a result, OPDX will no longer publish any information supplied by this source, and other bulletins are advised to follow a similar course, or you, too, may be threatened with "prosecution" for a claimed voilation of U.S. and international law.

IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX Bulletin) take note, the area code has change as of August 16th. The new 440 area code will replace the 216 area code. Currently both area codes can be used, but the 216 area code will be permanently replaced in April 1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

4F, Luzon Island (PHILIPPINES). Hans, PA3GKI, now signing 4F2DX, has been active on 20 and 40 meters. Activity seems to be between 1200 and 1400z, mostly on CW, but SSB is also an option. It has been mentioned that other bands will follow shortly. Hans will also visit another rare island in DU-land in the coming weeks. QSL 4F2DX via his home call PA3GKI.

5X, UGANDA (Update). Peter, ON6TT/5X1T, has just concluded his 7th tour in Africa. He reports that despite his heavy work load and his family being there, he was able to make about 11,000 QSOs (with about 500 on RTTY) between mid March and mid August. Peter states he put up a TH11 logperiodic which helped him in finally getting through to some USA stations on 10 and 12 meters. He is currently on holiday in Belgium for about 6 weeks, after which he will return to 5X until March of next year

(minimum, depending on the how the regional crisis develops). Peter wants to remind everyone that 5X is still well provided for with operations by Mats/5X1Z, Joe/5X1P and Paul/5X4F, who are all quite active. DJ1US is currently awaiting his license.

9M8, EAST MALAYSIA. There has been a report that Hans, DF5UG, may be active from here in September. His activity will include operations from Pulau Satang Besar and/or Pulau Satang Kecil Islands. His callsign will be 9M8QQ. QSL via homecall.

CL, CUBA (Rare region!). Look for Cuban station CL3FL, operated by Fernando, which is active every day on 10 meters between 28800-28900 KHz. This station is very rare because of two reasons. This station has a third class license in Cuba (CL), and it is located in the 3rd region. This region is needed for the Cuban Award. QSL via CO3CL: Jose Carlos Leon Ortega, Box 59 C.P. 33600, Guira de Melena, Habana, CUBA.

FH, MAYOTTE. Hermann, DJ2BW, and XYL Margot, DL2DK, will be active from here October 9-22th, as FH/DJ2BW and FH/DL2DK. They will be active on all bands from 160-10 meters, mainly CW and RTTY, but there will be a little SSB. Hermann states Low-Band (160/80 meters and RTTY) is prefered.

PIRATES! Mamuka Kordzakhia, The President of the National Association RadioAmateurs of Georgia (NARG) reports to OPDX that stations UF6VAI, UF6VBS, UF6VBI and UF6VBI are pirates operating from the Republic of Abkhazia which is an integral part of Georgia, and they should be using 4L. The prefix UF6 is a Russian prefix, and they do not understand why they are using UF6V. The Georgian Republic prefix of 4L has been in effect since August 1, 1994. Also, 4L6JR and UA6JR have been mentioned as pirates. They recommend NOT to work these stations.

PR5, SAO FRANCISCO ISLAND (Brazil). Look for this Brazilian island, which is located in the Santa Catarina State North Group (IOTA SA-27 and DIB-08), to be on the air September 1-15th. The callsign to be used is PR5L. Activity will be on SSB and CW with operations on 80-10 meters. QSL via: Jay Lira, Box 08, Florianopolis/SC, 88010.970, Brazil.

QSL INFO AND NEWS....
Carsten, DL6LAU, informs OPDX that all direct QSLs and also the first bureau cards for his/their J75T trip have been answered. He also reports they received a lot of direct QSLs with insufficiant return postage (Carsten.. yes, I also think that the 3DM <-> nearly 2 US$ from our German Post is a little bit too expensive...). Therefore, Carsten states they sent most of the U.S. cards to Jim, KF8VX, and his wife Cathie, KG8QL, who put them in the U.S. mail for them (Special thanks to Jim and Cathie!). Carsten will continue to answer the direct and bureau cards.

R9, ASIATIC RUSSIA. Members of the Nadym DX Club from Yamalo-Nenetskiy region (UA9K) of Russia will be active from Belyy Island in Karskoe Sea. Operators Nick/UA9KM, Alex/UA9KAS, Serge/UA9KG, Serge/UA9KL, Mike/UA9KO, Leo/UA9FL and Valeriy/RW4HW will be active between September 8-18th, using

the special call R9KM. This island is part of IOTA AS-083, but the team hopes for this to become a new one. All documents have been sent to the IOTA committee (Special TNX to UA9OBA). Operations will be on all HF band, including the WARC bands, on CW, SSB and may be RTTY. QSL via UA9KM: Nikolai Kuprin, 626711, Nadym Tyumen obl., P.O. Box 158, Russia. Please SASE, no "green stamps" only 2 IRC.

S2, BANGLADESH. The "DX News Letter" reports rumours are circulating stating that Jim, VK9NS, could be active as S21ZA in Oct/Nov.

SPECIAL EVENT STATION. ZS45TWR is a special callsign that will be used during 1997. It celebrates the 45 years of Trans World Radio, a Christian SW Radio station operating from different areas of the world, including Southern Africa. The callsign has been activated a number of times during the past 8 months. So far no QSL cards have been printed. This will happen later in the year, so please be patient. All direct QSLs with a U.S green stamp or 2 IRCs will receive a direct reply - it might just take a while. The QSL manager is ZS4Y: Leon M Foot, P.O.Box 1561, Welkom, 9460, Rep of South Africa. The street address appearing in most callbooks is also OK.

T9, BOSNIA-HERZEGOVINA. Kent, WT0Q, is in Bosnia, Croatia and Hungary with the U.S. Army. He will be on the air soon in Bosnia as T9/WT0Q, mostly on 20 meters SSB, but he will be getting a key soon and plans to do some CW. He has a vertical up for all bands from 10 to 40 meters including WARC bands. Kent told OPDX, that if someone wants to have him go to a certain band to work Bosnia, let him know by his E-mail address: wt0q@mailcity.com Also, Dale, N2NDY (T9/N2NDY), is at the same base as Kent. Dale also has a station set up, too (no details given). They both are near the city of Tuzla, which is 120 km north of Sarajevo.

TL, CENTRAL AFRICAN REPUBLIC. Information from "THE 59(9) DXReport" states Eric, TL8MR, is reportedly active from here and will be here for 1 year. QSL via F6FNU. There have been no QSNs reported yet.

TT8, CHAD (Update). OPDX received an update direct from Jim, WA4KKY, who is currently here (read OPDX.318). Jim (who was signing TT8/WA4KKY) has now been issued the Chad callsign of TT8JWM, and TT8/WB4MBU has also been issued a new Chad callsign of TT8JFC. TT8JWM has been active on 20 meters SSB between 1900 and 2230z (keep a lookout on or around 14219 kHz).

VK2, ISLAND OF MONTAGUE (NEW IOTA!). The JARA (Japanese Amateur Radio in Australia) members will activate VK2IOM (Island Of Montague) September 13-14th (UTC: Approx. Sept.13 0000z- Sept. 14 0400z). There is an unsigned IOTA reference number for this island because this island has never been aired before. This island is in the New South Wales State South Group. The JARA has received permission from the NSW National Parks and Wildlife Service in the Narooma District to operate from here. The operators will consist of: VK2BEX/Atsu, VK2IY/Ken, VK2TJH/Kyoko and possibly VK2IAZ/Ken. Suggested frequencies: CW - 7006, 14026, 21026 kHz +/- QRM and SSB - 7055 (for U.S.A. listening 7206), 14260, 21260 kHz +/- QRM. QSL to VK2BEX via the bureau or direct to: Mr. Atsu Asahina, P.O.Box 195, Killara, NSW 2071,

Australia.

VK9W, WILLIS ISLAND (UPDATE: All spots filled!). It has been reported that Doug, VE5RA, has just been confirmed and added to the team. Doug has been active from many locations and has operated from: VP9, VP2M, VP2V, V2, 8P6, ZF, ZF8, ZF9, J7, KH6, KH5K and 3D2. The complete team now consists of: WA1S/Ann, IV3FSG/Elvira, 7K3EOP/Noriko, VK4MR/Bob, VK2AEA/Vlad, VK4FW/Bill, AF7O/Darryl, FK8GM/Eric, K6KM/Bill and VE5RA/Doug. Also, the ODXG has announced that the callsigns on Willis are as follows:
YLS will use VK9WY
OMS will use VK9WM
On Holmes Reef they will all be using VK4YN. QSLs for all these operations go to VK4FW.

VK0, MACQUARIE ISLAND (UPDATE). Simon, VK1AUS, spoke to Tom, VK0TS, and states he has been very busy with repairs to equipment on Macquarie, so he was away from the main camp for over a week. Tom says look for him (if time permits) during the following times and frequencies:
Thursday 0930-10:45z 40m 7075 or 7070 kHz
Sunday 1000z- 80m 3570 and 3798 kHz
Monday 0930-1030z 80m 3570 and 3798 kHz
Tuesday 0400-0445z 20m 14222 kHz

WP2, U.S. VIRGIN ISLANDS. Dan, K4FXN, will be active from St. Croix, November 27th to December 6th, as WP2Z. He will be an entry in the 1997 CQWW CW Contest (November 29-30th). QSL via KU9C.

AA6BB/7 SILENT KEY. Well known QSL Manager Gerald (Jerry) Branson, AA6BB/7, became a "Silent Key" last Sunday (Aug. 17th) morning in his home at Junction City, OR. Many knew Jerry from his work on the W7PHO net and as QSL Manager for many DX stations. The South Sandwich Island DXpedition Group and The Midway-Kure DX Foundation announced the formation of a DX scholarship fund to honor the memory of Jerry. The scholarship, "The Jerry Branson Memorial Scholarship" will , in general, be awarded to entering freshmen who have distinguished themselves in DXing achievement. Applications and details will follow in a separate announcement and in the DX bulletins.
ADDED NOTICE: In July 1994, Jerry Branson set up the Joanie and Jerry Branson Trust, with Mark Perrin/N7MQ and Ron Vincent/WJ7R as trustees, and with Valley Radio Club as the beneficiary. Then the Trust and the Valley Radio Club entered into a memorandum of understanding, for the Club's members, particularly the DX-Contest Group, to provide QSL services in the event of Jerry's death or disability. While certainly all the DX stations will decide whether the Trust and Valley Radio Club will continue on for the next 60 or 90 days, the QSL mail sent to Jerry's address will be handled efficiently by those he selected to do this work in the event it was needed. If all DXers will continue to QSL via AA6BB until further notice, then their mail will be processed promptly. They know they cannot replace Jerry, but they will carry on for him as he asked them to do.

So what don't you agree with BOB about? That what I like to know? You only shown me that you can post RUDE Comments about my IQ and spelling. So by the looks of it my IQ is fare HIGHER then yours good-buddy. See I can make stupid commants too. NOW, What's your point About Ham Radio? I'll state mine first becouse you have yet to do so. 1. I think CODE should be left as it is. If you want HF then you should learn more to get it. CODE is fun and very useful. It's been part of radio from the very start. 2. People like you should GROW UP. This is why some people leave the Amateur Radio service. Due to all the RUDE and UN-NEEDED commanets from people like you GOOD-BUDDY. This is not the CB. So we don't have or NEED CB WARS, Echo Box's, 14.313 ers running all over the ham bands, and ect. SO NOW WHAT'S YOUR POINT ABOUT THAT GOOD-BUDDY! I see you been a CB er from 1976. Well I been on the CB From 1967 when I lived in New Jersey with my grandfather who was a HAM. I too at that time was a HAM. But I like the CB then more. But now the CB is mostly made up of people like you who have nothing better to do with there time then RUN PEOPLE DOWN. I for one don't need to or have to time for it. SO PLEASE, do us all a faver make a POINT or GO AWAY! Your not doing me no harm with your silly comments.

BYE, BYE, GOOD-BUDDY. 10-4 over and out!

KE4JCD - Bob
Lakeland, FL.

P.S. I been on the Internet for over 10 years now. I don't need to till you who my ISP is just know I HAVE ONE! BYE NOW!

3150. What is the A99 cb antenna

Try going into the CMOS setup... Generally, the basic power management
is there. The computer may tell you "press (something, usually DELETE)
to enter setup". If not, after boot, in dos, try ctrl+alt+esc and
ctrl+alt+s
What this is is the "Energy Star" feature. If you don't mind waiting a
few secs. when you return, and having the monitor powered down, it
saves a far amount of power (~1 amp).

Anyway, next time, try the comp.* groups first. Generally, somebody
there will be able to help you.

I realise this is not an amateur radio type question but I am hopeing
there is an amateur with the answers.
About a week ago, I had to send my computer, the monitor stayed here,
in for repair. When it came back the monitor switches semi-off after
i have been away from the keyboard for some time.
Does anyone know the magic way to keep the monitor in the normal mode?
I do have a screen saver mode.

Hi Sean

To a point you are right but isn't that how the various clubs got started? If you are dissatisfied with one club, move on to another. If you are dissatisfied with a particular repeater, move on to another.

I remember back in the late 70's, I was frustrated with the club I belonged to because I thought they were backward. I put out the feelers and was introduced to another much more productive club. From that club I got into packet radio during the early 80's.

Rather than complain about how one club does things, move on.

: else with this radio have a birdie on this freq?

I dont have the HTX-202 but I do have the HTX-242. Guess
what, it does the same thing on the same frequency. About
an S-1/2 to S-3/4 level though.

The Radio Shack product manager, Paul Opitz, in TX told me
that there was a cure for that, an adjustment inside the
radio. I forget what it was now since I didnt implement it
and 76 is not a repeater of concern to me.

You might try email'ing him and asking for details on how
its done. popitz1@tandy.com is his address.

You're leading the procession, my friend. Stop whining and put up
your own repeater, with all the latest bells and whistles. Do it
right, and soon you'll have all the traffic, and nobody'll be on the
old fogey machine except the old fogeys.

Or would you rather sit around and grumble that ham radio is going to
hell?

It certainly gives them more class than you.

Oh, wait. They'd still have more class even if they didn't do those
things.

Notes
=====

The abbreviations used in the propagation mode column are:

Tropo Tropospheric
Aurora Auroral
Spor-E Sporadic E
Meteor Meteor scatter
EME Earth-Moon-Earth (Moonbounce)
F2 F2 propagation
TEP Trans-Equatorial Propagation
Au-Es Auroral sporadic E
Iono Ionospheric scatter
FAI Field Aligned Irregularities
Rainsc Rain scatter

The distances were calculated using the International Ellipsoid of 1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code, is available can be downloaded as a 225k Word 6 file from the Internet at http://www.kirsta.demon.co.uk/dxrechow.doc.

Propagation modes are those reported by the stations concerned. However, it can sometimes be very difficult to distinguish between propagation modes. This is especially so on 50 MHz, where mixed-mode QSOs are common, and to a lesser extent it applies on 144 MHz. The propagation information should be read with this in mind.

Station positions were taken from the best available information, in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station location becomes available.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

That is exactly correct. As long as they maintain their control nothing
else seems to matter.

This is the case with the majority of the radio related echos on
fidonet,
but not all.

> I was "banned" from the echo, but I didn't go as easily as they would have like
> for me to go. ;-)

Yea, I was banned from the Scanradio echo when Bill Cheek started
kicking out
everyone who did think exactly like him or he saw as a threat. That
the only echo I have ever been banned from.

Incidentially, Bill recently left Scanradio echo. He held an election
for
the moderatorship. Two people nominated me but Bill refused to allow me
the nomination on that echo. What a chicken. Bill's election (I think)
produced Blake Bowers as the moderator.

> Let them have their control. Pretty much everyone is on the Internet nowadays
> and there's not much left for them to control.

very true.

Well in that case you've got at least a couple of choices.

1. If your significant other is female and not too chubby (kinda cute preferably), you can videotape her and I together (I'll demo all the positions etc.)

2. You can buy the book (There *really* is one by this title) "Sex For Dummies"

Rod Stiff

You may have a tube that's losing emmisions after it heats up. More likely is paper/wax capacitor that leaks electrically after it heats up. Less likely but possible would be be a resistor.

Many of us that work on old receivers replace all the tubular paper/wax capcitors regardless, since they are VERY prone to causing problems, including the one you describe.

You might try posting to rec.antiques.radio+phono if you want to generate more resposes.

Good luck,
Steve robertson

You need to buy yourself a receiver as it is obvious you haven't listened to any ham frequencies in a long while. Talk about gibberish and unprofessional inconsistent cutsey nonsense. Most experienced hams would not last 10 minutes in a professional radio environment. In what other radio service does someone named Bob (or name of your choice) take 10 minutes to tell someone on the other side of town how to spell his name and just to make things easier explains the spelling 20 different ways never once using the same phonetic alphabet. Bob is likely to finish his spelling dissertation with a final explanation of "that's Big Ole Boy" or some other "professional" phrase just to make sure things are clear.

Just where is it written your way is the correct way? Need to pull your head out of the sand every once in a while and give a listen.

Then there are the Q codes and the hi hi stuff and the best of 73s stuff.

Dave S.

<ke4jcd@juno.com>, from his trailer in Lakeland, Florida, babbled forth:

>Well sire if you had half as much a brains as you say you have, you
>would know that JUNO can't post to newsgroups.

Never said that you were posting from Juno. I said that you were too cheap to purchase your own Internet access. Who's ISP connection are you "borrowing", Bob?

> But being your nothing
>but a 2 bit YOYO not out to make a point but like most CBer's I know
>just out to start CB WARS, FIGHTS, ect. So I don't think your able to
>really have a viewpoint on this topic. :)

Oh, I see...just because I don't agree with Bob, that makes me a "CB'er" who's unworthy of having a public viewpoint. Got it.

> You sould please go back to your CB where you belong and please
leave
>HAM Radio to those who care. :)

That's right. Just because I don't agree with Bob, I should go away.

> like the man said GET A JOB! or Make a
>point!

Looks like you're part parrot too, Bob. I have a job, thank you very much. I'd venture to guess that I make more in a few months than you probably see in a year. I'm just not foolish enough to post information concerning my employment on the Net, lest I incure harassment from simpletons such as yourself.

>O, yes I do have Internet but being there so meny of your type of there
>I do not wish to give out my Internet E-Mail Address. I may get a mail
>boom or two! From people like you With better spelling but little WITT!

A "mailboom?" That's a new one, Bob. Tell me, what exactly is a "mailboom?" Never encountered one of those before.

>>KE4JCD - BOB
>Lakeland, FL.

Redneckville, USA. Home to thousands of rundown trailers and toothless residents.

>P.S. I will no longer reply to messages like this. Only ones that have a
>real comment about what I said.

You make a point of replying, in order to say that you won't be replying in the future. Okay, Bob. Whatever you say. Been hitting the "shine" again, Bob?

> So do us all a BIG favor GO AWAY Unless
>you have a point to make. you copy that good-budy! 10-4 over >and out!

You sure seem to know a lot about CB, Bob. Hey...is that your trailer with the Antron-99 on the telephone pole, 8 ugly dogs, and 14 dead '72 Impalas parked in the yard?

This newsgroup and ham radio have something in common -- LOOSERS!
I know becuase I am one. Never thought it would happen, but it has.
I look back on my life and wish to God that I had never bought into
this techno-crap. Out of work, out of hope...just hangin' around this
shit pit looking at the postings of a bunch of other loosers. Do you
really think that the people that are making a difference today are
wasting their time reading this horse shit? I'm on here for the same
reason that most of the rest of you are on here -- you don't have any
place else to be! You've reached the bottom and can't summon the
nerve or resources to climb out.

Look at Radio Shacks HTX 202. Can't beat the price. I'v had mine since they came out and have used it portable and as a base station until I could afford more. Don't have one bad thing to say about it.

Did the same thing here today. They made sure I was listed in their computer, which I didn't mind. I also asked the clerk about the new "Tech America" catalog and store that I seen info about here on the net and he said "what's that??" and had a puzzled look on his face. RS sure doesn't keep everyone informed....

I've noticed quite an improvement in the quality of RatShack's
salesdrones lately. Perhaps they've been taken off commission, and now
earn a steady wage instead - taking the pressure off of them to sell
sell sell and concentrate on actually serving the customer.

Hi Michael
I know this isn't specifically what you are looking for but I know a
company which specializes in battery analyzers. They have a website.
They also have a webpage which discusses some of the various batteries
and their charge characteristics. You might want to read what they
have to say about your particular battery.

According to the new catalog, there is no HF transceivers planned for the coming year. However, when RS brought out the HTX-204, earlier this spring, nothing was mentioned in last years catalog, so that rumor could be true. Only time will tell. The HTX-404 HAS been discontinuted, so if you want to buy one, you'll have to hunt around. However, the price has dropped considerably since it has been discontinuted.

Nope, we're still on commission. Maybe your local stores finally got
some employees who are actually considerate and helpful. I work at RS
and I try to be as considerate and helpful as I can. Unfortunately,
I've seen some employees in my area that aren't and unless they improve,
they don't stay with the company long.

I was able to purchase several 13.8V, 2A wall warts at a flea market.
After some experimentation I found the battery I was using came up to
full charge in about 4 hours. I then got 2 appliance timers at Home
Depot for $9.95, set it for 4 hours and now the battery stays charged.

Hi Larry. I'm a SWL & CB/GMRS Op. (studying for the code test)
and I heard of something else about ham radio "dying".

A guy I know is a dealer who went up to a ham fest somewhere
in New Jersey last weekend. He told me that an hour into the ham fest
some people from the NJ state tax offices showed up, with a state police
escort, and assessed all of the out-of-state dealers a fine for not having
some kind of a temporary sellers licence. The fine was a whopping $120.

If this is a trend, it looks not too good. I like to goto the Gaithersburg
Md
hamfest each year with some friends (a 4.5 hour drive north up 95 for us)
as I
find alot of good test equipment and used commercial radios at this show.
One of only 2 ham fests I go to each year. I'd hate to see this there, as
it would KILL the used equipment sales flea market, if not the hobby.

3199. Satellite Questions

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-26 00:00:00 UTC

Source record: 191413
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

While I have been looking for satellite frequencies I noticed that some of the uplinks are below the 144-148 2 meter band, and some of the downlinks are also below the 2 meter and 440 band. While I can do the mars/cap modification to my radio to access those freqs, i have two questions... will the mars/cap mod void the warranty if I don't have a permit, and would I have to have a permit to transmit to the uplink of some of those satellites? I believe the frequencies are around 142 or 143 Mhz. By the way I have a Kenwood TH-79A.
Any help is greatly appreciated. Thank You.

3200. QSLs Online by SK0UX

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-26 00:00:00 UTC
From: goran@tjansteforbundet.SE
Message-ID: <199708261238.FAA26980@mailbox2.ucsd.edu>
Source record: 191414

An interesting idea is developing at SK0UX. You may search logs for your QSOs on the Internet and then download QSLs immediately to your home printer.

We believe this is a first and the concept has already generated a lot of interest. The potential savings are enormous. We have already received requests from hams who want to set up their own QSL Servers and have one beta test site in the works.

QSLs from special event calls which we have used - SK0HQ and SK0RQ - as well as club members are also available. During the CQ WW CW in November, we will
make a field test on making QSLs from our expedition to Cuba (T48RCT) available within hours after your contact! Logs will be 'uploaded' to Sweden to the QSL Server wia AMTOR.

This concept conserves trees, time, and many other good things. Check it out for yourself at http://ham.te.hik.se/clubs/sk0ux.

The QSLs are typografically the same as a 'snail-mailed' card and may have pictures.

We get some questions: Will the ARRL/CQ awards committees
accept such QSLs, and a number of people are concerned about tampering.

The answer is: We certainly hope so. The key thing to realize
is that any awards/contest committee can verify a QSL at any time
by looking up the QSO at the QSL Server again. So this concept in fact offers *greater* proof against tampering than traditional QSLs, which hams have been known to falsify (isn't that amazing). In view of this, unbreakable
check-sums etc may not be necessary.

In fact, it would be a simple matter to write a program where the DXCC committee types in one line for each QSL to be verified with the QSO info and the server who issued the
QSL. Then the program goes around and asks for verification of those QSLs and comes back and says OK or not, without the need for interactive surfing to each QSL server. Untouched by human hand, so to speak.

Suggestions are very welcome since new possibilities are developing almost daily, mail to goran@tjansteforbundet.se.

>and nice that thank's and this is where I plan on staying!

I cannot agree with you there, Bob. In the UK there is far more
discipline on FidoNet. There is none of this spam that one receives
after sending messages on Newsgroups. Lots of people are returning to
FidoNet having had a taste of the Internet and being very disillusioned.

I don't know what country you are from but I suspect it is the u.s.a.

(1) try http://www.arrl.org to get some initial information

(2) If you own a scanner, try listenning on some of the local, to your
area, amateur repeaters. eg 146.94 seems popular in just about any
area. From listing to the local repeaters you should be able to get
an idea as to who is on. From there you should be able to get
callsigns.

(3) Look up in your local yellow pages for amateur radio outlets, in
your area. They should be able to connect you with local amateur radio
clubs.

I would be interested in knowing any results you have.

Buy a Yaesu FT-50 in 5 watt. VHF/UHF operation, general coverage receive (76-540 and 590-999 no block) and FM transmit 119-200 and 350-500. $339 usually. 100 memories, 4 char. Alpha. Digital voice recorder, ctcss encode/decode for local PD/FDs, digital PL, tone search, etc.

Great radio, but you will want a rapid charger (15 hours for 1 battery, radio required... ugh)

3204. Is amateur radio dying? Of course not.

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-26 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34022099.30212124@news.sprynet.com>
Source record: 191418

Is ham radio dying? of course not.

Ever since I have been involved with amateur radio (mid 60's), this hobby has been going through evolutions of change.

During the mid 60's we went from HF AM to to HF SSB.

During the early/mid 70's, we went from local contacts on HF to VHF, and we got used to repeater operation.

During the mid/late 80's we were introduced to VHF packet radio and other similar digital modes on HF.

During the past 18 months, or so, we have been trying to blend in the benefits of the internet with amateur radio.

Is amateur radio dying, of course not. We are just needing another direction to grow in and we are having a hard time finding it.

Just my opinion though

I think that some form of GMRS is going to altimately replace what we
current know as 27 mhz/CB.

Try this little experiemnt, type http://www.(companyname).com and see
what you get.
I did it with motorola and maxon and got something. It may not be the
specific company you want be at least it will give you something to
start with.
the motorola one works. If the others don't work as easily, try using
the names with search engines and see what happens.

Source record: 191422

i'm trying to locate VK3CDE@VK3YZW.

in '94 he published the summary of a converter for an ic735
which did the appropriate level conversions to produce rs232
signals from the serial i/o port of the 735. no drawings were
included in the article. he had also modified some existing
software for controlling the 735 from a pc.

i've done a net search and a search of the qrz db with no
useful results.

any info on VK3CDE@VK3YZW or the converter/software will be
apprciated.

Hello out there:

I have just acquired a couple of what were advertised
as Hi Band VHF Micor receivers. Just the receiver
board, no channel elements, no docs, no nothing.

The rubber stamp on the bottom ("wiring" side) of the
board sez: TLB8273B3

Can one of you folks "decode" that for me? And
what model Ch Els are "proper" for this thing?

Thanks in advance de John

Sometime, Larry, perhaps someone will correct YOU. Then you may
find how humiliating being corrected by a radio cop, on the air, can be.
I have no personal experience at either end of the circuit, but I have
participated in off-the-air critiques of emergency communications etc.,
in meetings, and have also been involved in phone calls to individual
hams,
in which we did point out the mistakes. These hams stuck with us. In
the case of a few who got corrected on the air, they quit. I have also
sent QSL cards to traffic ops and explained, on the card, the errors of
their ways. The only time I have done it on the air is to address the
matter at hand without identifying the offender, and this was done on
a net created specifically to discuss and educate.

QRA What is the name of your station?

The name of my station is ...

QRD Where are you bound for and where are you from?

I am bound for ... from ...

QRB How far approximately are you from my station?

The approximate distance between our stations is ... nautical miles
(or kilometres).

QTH What is your position in latitude and longitude (or according to any,
other indication)?

My position is ... latitude, ... longitude
(or according to any other indication).

QTN At what time did you depart from ... (place)?

I departed from ... (place) at ... hours.

QRI How is the tone of my transmission?

The tone of your transmission is ...

1. good
2. variable
3. bad.

QRK What is the intelligibility of my signals (or those of ...)?

The intelligibility of your signals (or those of ...) is ...

1. bad
2. poor
3. fair
4. good
5. excellent.

QRO Shall I increase transmitter power?

Increase transmitter power.

QRP Shall I decrease transmitter power?

Decrease transmitter power.

QSA What is the strength of my signals (or those of ...)?

The strength of your signals (or those of ...) is ...

1. scarcely perceptible
2. weak
3. fairly good
4. good
5. very good.

QSB Are my signals fading?

Your signals are fading.

QRQ Shall I send faster?

Send faster (... words per minute).

QRR Are you ready for automatic operation?

I am ready for automatic operation.
Send at ... words per minute.

QRS Shall I send more slowly?

Send more slowly (... words per minute).

QSD Is my keying defective?

Your keying is defective.

QRM Are you being interfered with?

I am being Interfered with

• 1. nil
2. slightly
3. moderately
4. severely
5. extremely

QRN Are you troubled by static?

I am troubled by static

• 1. nil
2. slightly
3. moderately
4. severely
5. extremely

QRG Will you tell me my exact frequency (or that of ...)?

Your exact frequency(or that of ...) is ... kHz (or MHz).

QRH Does my frequency vary?

Your frequency varies.

QTS Will you send your call sign for tuning purposes or so that
your frequency can be measured now (or at ... hours)
on ... kHz (or MHz)?

I will send my call sign for tuning purposes or so that my
frequency may be measured now (or at ... hours) on ... kHz
(or MHz).

QSN Did you hear me (or ... (call sign)) on ... kHz (or MHz)?

I did hear you (or ... (call sign)) on&#65533;... kHz (or MHz).

QSS What working frequency will you use?

I will use the working frequency ... kHz(normally only the
last three figures of the frequency need be given).

QSU Shall I send or reply on this frequency (or on ... kHz
(or MHz)) (with emissions of class ...)?

Send or reply on this frequency
(or on ... kHz (or MHz)) (with emissions of class ...).

QSV Shall I send a series of Vs on
this frequency (or ... kHz (or MHz))?

Send a series of Vs on this frequency
or ... kHz (or MHz)).

QSW Will you send on this frequency (or
on ... kHz (or MHz)) (with emissions of class ...)?

I am going to send on this frequency (or on ... kHz
(or MHz)) (with emissions of class ...).

QSX Will you listen to ... (call sign(s))
on ... kHz (or MHz)?

I am listening to ... (call sign(s))
on&#65533;... kHz (or MHz).

QSY Shall I change to transmission on another frequency?

Change to transmission on another frequency (or on ...
kHz (or MHz)).

QRL Are you busy?

I am busy (or I am busy with ...).
Please do not interfere.

QRV Are you ready?

I am ready.

QRX When will you call me again?

I will call you again at ... hours
(on... kHz (or MHz)).

QRY What is my turn?

Your turn is Number ...
(or according to any other indication).

QRZ Who is calling me?

You are being called by ...

QSC Are you a cargo vessel?

I am a cargo vessel.

QSR Shall I repeat the call on the calling frequency?

Repeat your call on the calling frequency; did not
hear you (or have interference).

QTQ Can you communicate with my station by means of the
international Code of Signals?

I am going to communicate with your station by means
of the International Code of Signals.

QUE Can you use telephony in ... (language), with interpreter
if necessary; if so, on what frequencies?

I can use telephony in ... (language)
on ... kHz (or MHz).

QTR What is the correct time?

The correct time is ... hours.

QTU What are the hours during which your station is open?

My station is open from ... to ... hours.

QRC By what private enterprise (or state administration) are
the accounts for charges for your station settled?

The accounts for charges of my station are settled by
the private enterprise ... (or state administration).

QSJ What is the charge to be collected to ... including your
internal charge?

The charge to be collected to ... including
my internal charge is ... francs.

QRW Shall I inform ... that you are calling him on ... kHz
(or MHz)?

Please inform ... that I am calling him on ... kHz
(or MHz).

QSO Can you communicate with ... direct (or by relay)?

I can communicate with ... direct (or by relay through ...).

QSP Will you relay to ... free of charge?

I will relay to ... free of charge.

QSQ Have you a doctor on board (or is ... (name of person) on board)?

I have a doctor on board (or ... (name of person) is on board).

QUA Have you news of ... (call sign)?

Here is news of ... (call sign).

QUC What is the number (or other indication) of the last message you received from me (or from ... (call sign))?

The number (or other indication) of the last message I received from you (or from ... (call sign)) is ...

QRJ How many radiotelephone calls have you to book?

I have ... radiotelephone calls to book.

QRU Have you anything for me?

I have nothing for you.

QSG Shall I send ... telegrams at a time?

Send ... telegrams at a time.

QSI I have been unable to break in on your transmission.

QSK Can you hear me between your signals and if so can I break in on your transmission?

I can hear you between my signals; break in on my transmission.

QSL Can you acknowledge receipt?

I am acknowledging receipt.

QSM Shall I repeat the last telegram which I sent you (or some previous telegram)?

Repeat the last telegram which you sent me (or telegram(s) number(s) ...).

QSZ Shall I send each word or group more than once?

Send each word or group twice (or ... times).

QTA Shall I cancel telegram number ...?

Cancel telegram number ...

QTB Do you agree with my counting of words?

I do not agree with your counting of words,
I will repeat the First letter or digit of
each word or group.

QTC How many telegrams have you to send?

I have ... telegrams for you (or for ...).

QTV Shall I stand guard for you on the frequency
of ... kHz (or MHz) (from ... to ... hours)?

Stand guard for me on the frequency of ... kHz
(or MHz) (from ... to ... hours).

QTX Will you keep your station open for further communication
with me until further notice (or until ... hours)?

I will keep my station open for further communication
with you until further notice (or until ... hours).

My speed ... is knots
(
QTK What is the speed of your aircraft in relation to the
surface of the Earth?

The speed of my aircraft in relation to the surface of
the Earth is ... knots (or ... kilometres per hour
or ... statute miles per hour).

QTL What is your TRUE heading?

My TRUE heading is ... degrees.

QTM What is your MAGNETIC heading?

My MAGNETIC heading is ... degrees.

QTN At what time did you depart from ... (place)?

I departed from ... (place)at ... hours.

QTO Have you left dock (or home)?
-OR-
Are you airborne?

I have left dock (or home).
-OR-
I am airborne.

QTP Are you going to enter dock?
-OR-
Are you home?
-OR-
Are you going to alight (or land)?

I am going to enter dock
-OR-
I am home.
-OR-
I am going to alight (or land).

QUG Will you be forced to alight (or land)?

I am forced to alight (or land) immediately.
-OR-
I shall be forced to alight (or land) at ...
(position or place) at ... hours.

QUJ Will you indicate the TRUE track to reach you (or ...)?

The TRUE track to reach me (or ...) is ... degrees
at ... hours.

QUB Can you give me in the following order information concerning:
the direction in degrees TRUE and speed of the surface wind,
visibility, present weather; and amount, type and height of
base of cloud above surface elevation at ... (place of
observation)?

Here is the information requested: ...
(The units used for speed and distances should be indicated.)

QUH Will you give me the present barometric pressure at sea level?

The present barometric pressure at sea level is ... (units).

QUK Can you tell me the condition of the sea observed at ...
(place or coordinates)?

The sea at ... (place or coordinateS) is ...

QUL Can you tell me the swell observed at ... (place or coordinates)?

The swell at ... (place or coordinates) is ...

QTE What is my TRUE bearing from you?

Your TRUE bearing from me is ... degrees
at ... hours.

QTF Will you give me the position of my station according to the
bearings taken by the D/F stations which you control?

The position of your station according to the bearings taken
by the D/F stations which I control was ... latitude, ... longitude

QRT Shall I stop sending?

Stop sending.

QUM May I resume normal working?

Normal working may be resumed.

QUD Have you received the urgency signal sent by ...
(call sign of mobile station)?

I have received the urgency signal sent by ...
(call sign of mobile station) at ... hours.

QUF Have you received the distress signal sent by ...
(call sign of mobile station)?

I have received the distress signal sent by ...
(call sign of mobile station) at ... hours.

QSE What is the estimated drift of the survival craft?

The estimated drift of the survival craft is ...
(figures and units).

QSF Have you effected rescue?

I have effected rescue and am proceeding to ... base
(with ... persons injured requiring ambulance).

QTD What has the rescue vessel or rescue aircraft recovered? ...

(identification) has recovered ...
1. ... (number) survivors
2. wreckage
3. ... (number) bodies.

QTW What is the condition of survivors?

Survivors are in ... condition and urgently need ...

QTY Are you proceeding to the position of incident and
if so when do you expect to arrive?

I am proceeding to the position of incident and expect
to arrive at ... hours (on ... (date)).

QTZ Are you continuing the search?

I am continuing the search for ... (aircraft,
ship, survival craft, survivors or wreckage).

QUI Are your navigation lights working?

My navigation lights are working.

QUO Shall I search for ...
1. aircraft
2. ship
3. survival craft
in the vicinity of ... latitude, ... longitude
(or according to any other indication)?

Please search for ...
1. aircraft
2. ship
3. survival craft
in the vicinity of ... latitude, ... longitude
(or according to any other indication)?

QUP Will you indicate your position by ...
1. searchlight
2. black smoke trail
3. pyrotechnic lights?

My position is indicated by ...
1. searchlight
2. black smoke trail
3. pyrotechnic lights.

QUQ Shall I train my searchlight nearly vertical on a cloud,
occulting if possible and, if your aircraft is seen,
deflect the beam up wind and on the water (or land) to
facilitate your landing?

Please train your searchlight on a cloud, occulting if
possible and, if my aircraft is seen or heard, deflect
the beam up wind and on the water (or land) to facilitate
my landing.

QUR Have survivors ...
1. received survival equipment
2. been picked up by rescue vessel
3. been reached by ground rescue party?

Survivors ... 1. are in possession of survival equipment dropped by
... 2. have been picked up by
rescue vessel 3. have been reached by
ground rescue party.

QUS Have you sighted survivors or wreckage?
If so, in what position?

Have sighted ...
1. survivors in water
2. survivors on rafts
3. wreckage
in position ... latitude, ... longitude
(or according to any, other indication).

QUT Is position of incident marked?

Position of incident is marked by ...
1. name or smoke float
2. sea marker
3. sea marker dye
4. ... (specify other marking).

QUU Shall I home ship or aircraft to my position?

Home ship or aircraft ... (call sign) ...
1. to your position by transmitting your call sign and long dashes
on ... kHz (or MHz)
2. by transmitting on ... kHz (or MHz) TRUE track to reach you.

QUW Are you in the search area designated as ... (designation
or latitude and longitude)

I am in the ... (designation) search area.

QUY Is position of survival craft marked?

Position of survival craft was marked at ...
hours by ...
1. flame or smoke float
2. sea marker
3. sea marker dye
4. ... (specify other marking).

QTT The identification signal which follows is superimposed on
another transmission.

There are 4 RS stores in the immediate area. Only one store has anyone there that knows what they are doing. Whenever a store starts getting a real bad rep they move the good guy into the bad store and play musical employees with all the rest.

3222. SWARM DEMO - PATCHED & ENHANCED

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-27 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5u1vsl$brm1@mars.online.uleth.ca>
Source record: 191431
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap

We have patched and re-released our fully-functional SWARM (Solar Warning And Realtime Monitor) DEMO software. You get an additional 30-day trial period with this version, regardless of whether you installed an earlier version or not.

We have corrected a bug in previous versions which prevented some systems from being able to connect to the Internet to collect data through SWARM. Users who experienced this would have seen a SWARMGET ERROR message indicating an "Invalid Command Line Argument" error. This revised DEMO corrects this problem.

We encourage everyone who is interested in staying on-top of solar, geomagnetic and ionospheric activity to try this DEMO. It is the world's most significant tool designed to provide realtime notification of conditions that can directly affect radio propagation conditions, space environment conditions, and numerous other geophysical conditions. Detailed notes regarding this software can be found at: http://solar.uleth.ca/solar/www/swarm.html

You can obtain this demo software at:
http://solar.uleth.ca/solar/www/swarm-demo.html

Please note that we will be working on the network at this site during the 29 to 31 August time-frame. If you have difficulties obtaining this demo during that time-frame, please keep trying. We will try to minimize any disruptions.

Dear Phone User...

Do you know how much it costs to make a long distance call...

AWAY FROM HOME

Using your Phone Company's credit card or other phone card ??

Most people do not !!!

They think that they get the same rate away from home, as they
do at home..but unfortunately they frequently don't.

All major long distance companies charge you a " surcharge "
for every call made away from home..

Ranging from 30 cents per call to 89 cents per call...

Here is what the " Big 3 " Charge you per call:

AT&T
30 Cents Surcharge Per Call
30 Cents Per Minute

MCI
30 Cents Surcharge Per Call
30 Cents Per Minute

Sprint
30 Cents Surcharge Per Call
35 Cents Per Minute

NOW

How about 19 CENTS PER MINUTE

24 Hours A Day
7 Days A Week
To All 50 States
No Restrictions
No Surcharges
No Memberships
No Gimmicks
No Multi-level Marketing

Just Savings

If You Are:

In Sales
In Business
In Marketing
A Student
Making Calls Away from Home

You NEED this Card !!!

Call Us Today @

CB RADIO EPITAPH 1997
by Amor Powers

A once brilliant light of technology shone,
Then trashed and forgotten for cellular phone.
Midlife crisis between twenty-three and forty;
Hunted and wounded for a bit of bounty.

The faithful held vigil but the masses didn't care:
They just wanted old CB off the air.
Cable to view and surround sound to hear,
But the picture was scrambled when CB was near.

Was it consumer equipment at fault?
The town didn't care they just called it a halt.
Bashing through doors with battering rams,
Local authorities pounced along with some hams.

The nurses tried and the doctors operated,
Poor old CB wasn't even sedated.
A feeble voice and a heart condition;
Good old CB had seen the last mission.

Here lies CB Radio,
Down the road.
Once a beam...
Now a dummy load.

Bob? After reading your posts for the last few months I must say I am surprised at your comments here, you seem upset that someone calls your hand on things you've said. Bob I'd like to point out that you have made many accusations about Citizens Band radio none of them very flattering. Yet you complain about others who "RUN PEOPLE DOWN." You have also blamed the ARRL for situations like the foul language and jamming on several well-known frequencies. I think after getting some responses from ARRL employees you finally figured out that the ARRL was a publishing company not a regulatory or licensing organization.

I can not comment on your IQ Bob, however, your use of the English language is pathetic. Your grammar at times has been so poor your posts are unreadable. While trying to discuss the role of the ARRL with you a few weeks back I had difficulty understanding most of what you said. I would also like to point out that while you use Morse code as a "CB filter" everyone on 14.313 and 3894.5 KHz has passed a code test. So much for CW weeding out the bad element. Additionally for someone with so much disdain for CB you certainly enjoy the use of that bands jargon in your posts.

In short, if you can't stand the heat, stay out of the kitchen.

Hi Dave
A suggestion.
Rather than using the mobile magnetic mount and having to add all the
extras, etc, have you considered a regualar 1/4 wave groundplane. I
know it isn't as fancy as a mag mount but it does work and is much
simpler. After you have reintroducted yourself to amateur radio you
can then rethink out the antenna situation.

I think the real issue behind getting an amateur radio licence is to
allow people to educate themselves in the area of technical
communications.

If your personal interests are strickly above 30 mhz, that's fine, but
you should not discourage people from at least being exposed to
communications below 30 mhz.

Yes, hf cw does have its benefits.

3236. "Invisible Dog Fence" RFI update/handy info

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-27 00:00:00 UTC
From: jdc@cci.com
Message-ID: <EFJsx6.3q0@sunsrvr6.cci.com>
Source record: 191445

Our next door neighbor recently got one of those "invisible" dog fences that use a RF signal to trigger a shock collar on the dog. It is sold under the "Pet Alert" brand name. The system generated some RFI, and the fellow who sold and installed it came over to fix it.

The fix was:

A garden-variety 110 volt AC power line filter, installed in series with the RF signal before it heads out to the loop around the yard. It really works, too. I was expecting some wild precision multisection low-pass filter, but this is a clever use of inexpensive off-the-shelf parts.

The only downside is that the company charged the local franchise owner $45 for it. The filter had a 1989 date code, so it probably came from a surplus house. I tuned him in on where to get them for under $5.

It's for sticking to a car , har har. Kidding... Unless Im mistaken that mount does not have a loading coil inside which means you can cut a 1/4 wavelenth of wire for your favorite band and voila you have a mag mount antenna.

: I am not considering Yaesu radios due to reported problems trying to get the
: radios services and getting answers from tech support for their products.
: Any thoughts or recommendations on the above?

I don't have a recommendation, but I would like to point out that EVERY
radio manufacturer is going to get bad-mouthed from time to time about
tech support and radio servicing. Unless Yaesu has slipped recently,
they are most definitely no worse than the rest. Each of the
manufacturers you mentioned have been beat up for poor service and each
has no doubt given poor service at times...very few companies are perfect.

All of the ones you listed (including Yaesu) make radios that people are
happy with. But, each radio has its quirks and drawbacks. Check 'em out,
assuming you don't live in a place which makes that difficult.
Yaesu currently seems to be the leader in whiz-bang technology, with
the VX1R and FT50, etc.

Have fun looking!

Yhea, try that when a tornado or hurricane blows through and knocks down the cell sites and telephones. What a crappy attitude.....and from an extra too.....

>battery, radio required... ugh)

Yes, when you buy a stock FT-50 you have to charge the battery on the radio. If you don't like that, get the CA-15 charging stand. The AC adapter plugs into the charging stand, and you can just drop a battery pack into the CA-15 to charge it while you're using the radio with another battery. Or you can drop the radio plus battery into the CA-15. Charging takes 10 hours instead of 15 (for the 650 mAh batteries).

Of course, a fast charger is even more convenient: one hour to recharge a battery pack. But the CA-15 is a whole lot cheaper.

Well If your surge protector is similar to mine the neon bulb(s) have
nothing to do with the surge protection abilities of your surge
protector but merely are a visual indication that the power is on
(like the dial light in an HF rig) , but from what I know of MOV's
(actually fancy Zener's I think) they *can* degrade over time and if
the surge protector is old enough to have the neons flickering it
might not hurt to spring for another one. Unless someone else has a
simple method for testing a surge protector I don't know of any way to
test one without some pricey test gear.

The ARRL Letter
Vol. 16, No. 34
August 29, 1997

NOTE: Because your editor is taking a long Labor Day weekend, this edition of The ARRL Letter is being distributed one day early. We wish you all a safe and enjoyable holiday weekend.--Rick Lindquist, N1RL

Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* FCC revises RF safety "thresholds"
* Azden leaving US ham market
* KC5VPF still on Mir schedule
* Ham radio to benefit from ACE spacecraft
* A message with the music
* HANDI-HAM Actividay on August 30
* James L. Russell, W8BU, SK
* In Brief: This weekend on the radio; Bill Petrie, K1ETR, turns 100! SBE honors W3KD, K7CR, KB7UXU; Special event call sign ID reminder; KE6MWX Yagi project among science fair winners; Searchable Code of Federal Regulations; Maritime station KPH goes dark; US House honors Pasadena Radio Club

---

FCC REVISES RF SAFETY "THRESHOLD" LEVELS

The FCC has revised the power level thresholds to trigger a routine Amateur Radio station RF exposure evaluation, and the changes will be welcome news for most hams. When the FCC first decreed a year ago that ham radio stations would have to comply with RF exposure guidelines, it set a 50-W threshold level. The updated guidelines, announced August 25, increase that threshold level on all HF bands except 10 meters, where it remains at 50 W. The FCC made no changes in the RF exposure limits it announced last year.

The new RF safety guidelines are scheduled to become effective January 1, 1998, for Amateur Radio stations.

The FCC went along in part with a request by the ARRL to establish a sliding scale for threshold levels, depending upon frequency. The revised thresholds are 500 W for 160 through 40 meters, 425 W on 30 meters (where the maximum legal power is 200 W), 225 W on 20 meters, 125 W on 17 meters, 100 W on 15 meters, 75 W on 12 meters and 50 W on 10 meters. The threshold for all VHF bands is 50 W. On UHF, the threshold level is 70 W on 70 cm, 150 W on 33 cm, 200 W on 23 cm, and 250 W on 13 cm and above. Stations operating at or below these respective power levels are categorically excluded from having to perform a routine RF radiation evaluation. However, all stations, regardless of power level, still must comply with the RF exposure limits.

Along with its August 25 Second Memorandum Opinion and Order announcing the changes, the FCC released the "core" text of its long-awaited Office of Engineering and Technology (OET) Bulletin 65, Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields. The bulletin contains generic equations that can be used to analyze fields due to almost all antennas, although the FCC warns that "the resulting estimates for power density may be overly conservative in some cases." Hams leery of formulas might opt to wait for the easier-to-use Supplement B to OET Bulletin 65, which will include information designed specifically for evaluating Amateur Radio installations. The supplement promises to detail how hams can determine more simply if their individual stations comply with the new regulations. The FCC says the supplement will contain "information on projected minimum exclusion distances from typical amateur antenna installations."

The FCC said it would issue Supplement B "as soon as a review of the current draft is complete." When it's ready, Supplement B will be available to download from the FCC's Web site, http://www.fcc.gov/oet/rfsafety. The FCC directed inquiries as to the availability of the supplement and other RF-related questions to its RF Safety Program, 202-418-2464; e-mail rfsafety@fcc.gov.

Last year, the FCC established time-averaged maximum permissible exposure (MPE) limits for RF fields in two tiers--for controlled environments (ie, a ham's immediate household, including visitors) and uncontrolled environments (ie, neighbors, the general public). If a routine evaluation of a ham station indicates that human exposure to RF fields could be in excess of the FCC's MPE limits, the licensee must act to correct the problem and ensure compliance. This could include changing operating patterns, relocating antennas, restricting access, changing frequency, output power or emission type or any combination of these and other remedies.

The FCC says that ham radio facilities "represent a special case for determining exposure, since there are many possible antenna types that could be designed and used for amateur stations."

The revised regulations categorically exclude most mobile installations, including those in the Amateur Radio Service, from having to comply with the RF-exposure or station evaluation guidelines. Since the FCC issued its guidelines, additional questions on RF safety have been added to the Amateur Radio examination question pool.

OET Bulletin 65 and the FCC Second Memorandum Opinion and Order are available at http://www.fcc.gov/oet/dockets/et93-62/. More details on the FCC's latest announcement on RF safety will appear in the October issue of QST.

AZDEN LEAVING THE US HAM RADIO MARKET

A player in the US ham radio market since the 1970s, Azden is leaving the Amateur Radio business in this country as of August 31. A letter from Azden's Lew Reinberg, W2BIE, cited "the worldwide decline of the business" as the reason for the move. "We entered the US market through this office very late in the game and with older product," Reinberg's letter states. "The lack of growth of the end-user base made it impossible for us to spend the huge amount of capital necessary to design and tool up for a more advanced model."

Azden's pullout applies only to the US market. Azden Vice President Ken Bush said this week that Azden radios continue to be sold in Japan.

Among Azden's product lineup were similar FM mobile transceivers for several bands. The company also marketed some H-Ts and a headset. The company's remaining ham radio inventory has been sold to Amateur Electronic Supply (800-558-0411; http://www.aesham.com; e-mail help@aesham.com).

Reinberg said that while Azden will stop selling ham radio gear in the US, the company will continue to repair its radios at its Franklin Square, New York, headquarters "for the foreseeable future." Parts and manuals for Azden gear will continue to be available as well.

Sid Wolin, K2LJH, manager of Azden's Communications Division, reportedly plans to retire. Reinberg says he will remain at Azden's Franklin Square office to handle customer questions and process service and repair orders.

For more information, call Azden at 516-328-7500; e-mail azdenus@aol.com; http://www.azdencorp.com.

WOLF REMAINS ON SCHEDULE TO REPLACE FOALE ABOARD MIR

It appears that NASA will allow David Wolf, KC5VPF, to take the place of Mike Foale, KB5UAC, aboard the Russian Mir space station next month. That is, as long as Mir repairs continue to be as successful as they were last week and this. NASA has not yet made it official, however.

FCC notifications already have been submitted to allow Wolf to operate the ham gear aboard Mir to contact third parties.

Following another brief crisis on Monday, the Mir's oxygen generation systems were reported back in working order by the following day. Both the main and backup systems went down simultaneously for several hours on Monday. Other recent problems have included another computer crash August 18 that caused power aboard the spacecraft to fail as the Mir lost its orientation with the Sun.

Foale has posted occasional bulletins on the R0MIR packet system aboard Mir to update the ham radio community on the situation aboard the spacecraft.

"We are now getting the station back into shape, trying to reconnect cables disconnected before the EVA [space walk]," Foale reported last weekend.

Some power was reported flowing through cables that pass through a makeshift hatch from three of the solar arrays attached to the damaged Spektr module. As of Thursday, the Mir crew still was seeking a way to activate the motors that aim the solar arrays. The two Russian crewmates, Anatoly Solovyov and Pavel Vinogradov, installed the cables from Spektr during an internal spacewalk a week ago. Foale monitored the "internal spacewalk" from the safety of the Soyuz spacecraft that serves as both the transportation vehicle for the Russian crew members and an escape vehicle for all space station occupants.

Until this week, the station had been operating at approximately half power as a result of damage sustained when the station collided with a Progress supply rocket during a practice docking maneuver June 25.

Foale and Solovyov are set to do an external spacewalk September 3 to determine the extent of damage to the Spektr module.

HAM RADIO WILL BENEFIT FROM NEW ACE SPACECRAFT

Data gathered by the Advanced Composition Explorer (ACE) spacecraft--launched this week from Kennedy Space Center--will be of importance to everyone from Amateur Radio operators to solar and space physicists during the next 2 to 5 years as we approach the solar maximum in 2000.

This spacecraft will serve as the first real-time space weather satellite that will provide forecast centers around the world with valuable real-time information regarding the near-Earth and interplanetary space environments. The latest word is that the spacecraft is functioning perfectly.

The spacecraft is on its way toward an orbital location approximately one million miles toward the Sun, between the Sun and the Earth (at what is known as the L1 point--the first liberation point, or the first Lagrangian point). This is a point between the Sun and the Earth where the various forces which act upon spacecraft (gravity, for example) precisely balance out, enabling the spacecraft to orbit the Sun at the same rate as the Earth, but one million miles ahead of the Earth. ACE will require approximately 113 days to reach its final orbital position and complete its checkout. Data should be flowing from all instruments by then.

The ACE spacecraft is equipped with an array of instruments that will measure such important quantities as the velocity of the solar wind, the composition of the solar wind, the composition of extrasolar and extragalactic matter, and much more. It also has equipment which will allow it to transmit continuously to the Earth. NOAA has set up three primary reception centers that will maintain contact with this datastream 24 hours a day, 365 days a year, for as long as the spacecraft remains operational. This data will then be processed and made available on the Internet for anyone to receive. Real-time ACE data will be available to the public and scientific communities through the SWARM (Solar Warning and Realtime

Monitor) software at http://solar.uleth.ca/solar/www/swarm.html. Data are expected to begin flowing from the ACE spacecraft through the near-real-time data system (and through SWARM) by about February 1998.

This availability of data will provide researchers and amateurs with the unprecedented ability to observe (up to 60 minutes before the Earth is impacted) the arrival of major interplanetary disturbances ejected from the Sun. Such disturbances can severely disrupt radio communications, spacecraft operations, and even such things as electrical hydro power generation and distribution.

Having advance word on such disturbances could be highly useful. Hams and professional radio communicators will be able to complete communications or adjust frequencies and transmitter powers prior to the arrival of such disturbances. Power plant operators will be prepared to shift loads in the event of induced electrical currents from strong geomagnetic storms that form as a result powerful solar disturbances impacting with the Earth. Satellite operators will be able to monitor their spacecraft more closely and take appropriate actions to prevent surface charging or other hazardous events from damaging spacecraft.

Observers of these natural phenomena also will benefit. People will be able to drive to favorable dark-sky sites to observe the explosive release of energy in Earth's upper atmosphere that is responsible for forming the northern and southern lights, also known as the aurora borealis and the aurora australis, respectively.--Cary Oler

A MESSAGE WITH THE MUSIC

A recent "Mr. Music" column by syndicated writer Jerry Osborne addresses the appearance on some music albums of messages or phrases in Morse code. For example, at the beginning of the Barclay James Harvest's Ring of Changes, the album's name is spelled out in CW on the first track. Barclay James Harvest member John Lees is a ham (WD4FHD).

Rocker Joe Walsh, WB6ACU, taps out the words "Register and vote for me AR" at the start of the song "Vote for Me" on his album Songs for a Dying Planet. The characters YYZ are belted out on percussion then by the bass guitars on the song of the same name on the Rush album Moving Pictures. Osborne says YYZ is the beacon ID for the Toronto International Airport, and the group's guitarist is a private pilot.

The B-52s use some CW in Planet Claire. So did the Blues Magoos in their album I Can Move a Mountain. In the song "Pencil Rain" by They Might Be Giants, a stretch of code spells out a refrain, in Spanish, of a popular Mexican song. The Roger Waters album Radio K.A.O.S. is filled with Morse code messages, much of it under the music. The cover also has the titles of the tracks spelled out in code.

Osborne says the track "Miss Morse" on the album One Nation Underground by the rock band Pearls Before Swine reportedly spells out various vulgarities in CW.

HANDI-HAM ACTIVIDAY THIS WEEKEND

All amateurs are eligible to participate in the HANDI-HAM Actividay, Saturday August 30, 1997, 1200 to 2400 UTC. Single or multi-ops are permitted. Suggested CW frequencies are 3675 to 3750, 7100-7150, 14025 to 14100, 21025 to 21200, and 28100 to 28300 kHz; suggested SSB frequencies are 3875 to 3950, 7250 to 7290, 14270 to 14300, 21350 to 21400, and 28300 to 28500 kHz.

Logs should indicate date, time, station worked, operator's name and QTH, frequency, type of emission, output power, report sent, report received, and whether the operator worked is a HANDI-HAM member. Logs also should show the total number of contacts and claimed score. Include your name, address and call sign, and indicate if you're a HANDI-HAM member.

Score 5 points for contacts with W0ZSW, the HANDI-HAM HQ station; 5 points for contacts with W0EQO, the HANDI-HAM camp station; 2 points for contact with HANDI-HAM member; 1 point for contact with nonmember. Work stations only once per band per mode.

A HANDI-HAM logo mug goes to the station with the most points. All participants who send in logs will receive a certificate. Send an SASE (minimum 5x7) with log to Jim Whittaker, WB0TVL, 3019 O'Henry Rd, Brooklyn Center, MN 55429-2220.

For more information on the Courage HANDI-HAM System, call 612-520-0515; e-mail handiham@mtn.org or visit http://www.mtn.org/handiham.

JAMES L. RUSSELL, W8BU, SK

Veteran ham radio operator Jim Russell, W8BU, of Rocky River, Ohio, died August 15, 1997. He was 98 and had been a ham for approximately 85 years. Russell was said to be the first ham west of the Allegheny Mountains to work Europe. He was an ARRL and QCWA member and served as a net control station for the Intercontinental Traffic Net. In his professional life, Russell was an attorney, a justice of the peace and the public safety director for Fairview Park, Ohio. He also dabbled in astronomy and telescope building. His late wife, Eila, was WA8EBS. His brother, Dave, is N8DR.--Jerry Murphy, K8YUW

IN BRIEF:

* This weekend on the radio: The HANDI-HAM Actividay is set for Saturday. See the announcement above for details.

* Bill Petrie, K1ETR, turns 100! Thomas W. "Bill" Petrie, K1ETR, of Waltham, Massachusetts, turns 100 years old today. In a letter, ARRL Executive Vice President David Sumner, K1ZZ, extended hearty congratulations to Petrie on behalf of the officers, directors, members and staff of the League. Petrie's niece, Marcy Just, says that Petrie was born in England and came to the US as a youngster. He is a World War I veteran and is retired from the Waltham Watch Company. He's been a ham for more than 40 years and is still active on the air. Ken Hopper, K2VAM, in Phoenix, Arizona, wrote HQ to say that Bill

recently told him he was planning to make a trip up his tower to "tighten some bolts."

* SBE honors W3KD, K7CR, KB7UXU: The Board of Directors of the Society of Broadcast Engineers elected Chris Imlay, W3KD, a Fellow of the Society in recognition of his service and contributions to the advancement of broadcast engineering. Imlay, the ARRL General Counsel, has served as SBE in the same capacity since 1992 (and previously, as SBE's legal counsel since 1984). The society said Imlay "has provided a professional and respected voice on legislative and regulatory issues." The SBE has named Clay Freinwald, K7CR, of Auburn, Washington, as Broadcast Engineer of the Year. He's chief engineer at KBSG-AM/FM in the Seattle area. The SBE named Michael P. Scott, KB7UXU, of Pulyallup, Washington, as Educator of the Year for the second year in a row. He's an instructor at Bates Technical College in Tacoma.--Society of Broadcast Engineers

* Special event call sign ID reminder: When taking advantage of the newly available 1x1 special event call sign program, operators are reminded that a station using a 1x1 call sign must announce its regularly assigned call sign at least once an hour.

* KE6MWX Yagi project among science fair winners: Fourteen-year-old Sara Hanna, KE6MWX, of Willits, California, was among the winners at the 46th annual California State Science Fair held in May in Los Angeles. Her project, "Does the design of the driven element affect the radiation pattern of a Yagi antenna?" placed first in the junior division of electricity and electronics. She got a gold medal and a cash award. Last year, Sara finished in second place in the same division with her project comparing Yagi and quad antennas. Her parents are Tim and Sue Hanna, WB9NJS and KE6YKY, respectively.--Tom Orman, KD6VWD

* Searchable Code of Federal Regulations: A searchable Code of Federal Regulations, which, of course, includes 47CFR97--the Amateur Radio regulations--is available at http://www.access.gpo.gov/nara/cfr/cfr-table-search.html from the National Archives and Records Administration.--thanks to Ed Hare, W1RFI

* Maritime station KPH goes dark: The oldest West Coast maritime station, KPH in California's Marin County 20 miles northwest of San Francisco, has been closed--a victim of a shrinking market for its services and competition from satellite systems. KPH was bought by Globe Wireless, a competitor. KPH used high-speed Morse and SITOR to communicate with ships. The station had operated from the Bay Area for more than 80 years.--thanks to Daniel Mackintosh, W6SPC

* US House honors Pasadena Radio Club: The Pasadena Radio Club, W6KA, took advantage of this year's Field Day (June 28-29) to commemorate its 40th year of affiliation with the ARRL. Proclamations from both the US House of Representatives and the California Legislature honored the group's 40 years of public service. The club was founded in 1957 and has been called upon numerous times over the years to help out in emergencies. Club members relayed health and welfare traffic during the days following the 1994

Northridge earthquake. The club also has supported public service activities and events.--Brett R. Henry/Pasadena Radio Club

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org. Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

3247. Morse code for disabled users of computers

Newsgroup: rec.radio.amateur.misc
Date: 1997-08-28 00:00:00 UTC
From: jmrubin@ix.netcom.com
Message-ID: <3405fccf.5942159@nntp.netcom.net.uk>
Source record: 191365

The Canadian radio program As It Happens (aih@toronto.cbc.ca) had an interview today with Deborah King of an organization called "Morse 2000 Outreach" at the U. of Wisconsin, Eau Claire. She was promoting various Morse code computer interfaces for some people who cannot handle a full keyboard.

For example, a man who has been in a bad auto accident may be able to keep a job which requires some typing into a computer if he can learn to send code sufficiently quickly.

Hi Bruce,
There are a few ways to check the bloody things but...I'm
afraid that it results in "Yep...they WERE good." My advice
is to purchase ones that have monitors across the devices
and when they indicate "Yeah, got a hit"...replace the
individual devices.
friend.

Funny, YOU are the one that everyone pokes fun at & people use YOUR
identity to make trouble. Just a few days ago you were complaining
about people using your identity & threatening legal action.

> Well, lets see, you didn't like the results of an election in scanradio
> and decided to go on a 5 month tirade, thereby driving large numbers of
> people to other echoes.

No Eric, I NEVER had a problem with ANY election, & I NEVER went on a 5
months tirade as you indicate. I also NEVER drove people to other
echos,
you can give that acclaim to Bill Cheek. (Remember his kicking people
off the echo on a daily basis with his "zero tolorance" policy??)

> THEN, you brought the problem to the internet
> some 18 months ago. Need I go on?

Actually, it was last July 20 (of 1996). I know the date it all started
because it was my father's birthday. Hardly 18 months ago Eric, just
barely 13. The ONLY reason I even mentioned the problem on the internet
was because Bill Cheek was causing MAJOR problems on a news group
REC.RADIO.SCANNER and SEVERAL people were tired of his antics. A
handful
of us took action to rid the NG of his hijacking type of trouble.

Truth hurts, huh Eric?

> > Hmm, you are talking in contradictory circles again & making yourself
> > look stupid, *AGAIN*.
> Well, opinions (like yours) are like assholes. Everyone has them and a

Source record: 191372
Body handling: HTML body converted to readable text

I have a Mirage 2M 30W amplifier.

The model is a B23.

I would like to use my Radio Shack HTX-202 2M HT radio with it.

The HT listed above can output 1W and 5W using the supplied battery
pack.

There are (2) ceramic adjustable caps on the circuit board with no indicators
as to what capacitor numbers they are.

In addition, there are (2) pots which one is blue (located by a 5W
50ohm resistor and the other (red) located near the SO-239 antenna connector.

I do not have the adjustment manual or schematics. Does anybody
have a copy of the manual that I would be happy to pay for?

If you have had or use such an amplifier, I would appreciate any feedback
that I can get in properly adjusting this unit.

Please e-mail me back as I do not have many opportunities that allow
me to regularily chech this posting.

> me through that much steel?

NO, although going to UHF will help, you'll still probably have dead spots. Look for a large extentable antenna, there are many of the short 'rubber duck' types that perform very poorly. If your both outside on the deck you'll have no problems.

The 2 miles you mentioned with your VHF handhelds is very typical. You only have 3 or 4 watts with very inefficent antennas. If you both had those hand helds attached to a simple ground plane at 40 or 50ft that range may extend as far as 30 miles or so.

Good luck, Tim, ka8ddz

Poor Willy, you just dont get it. You, like others have allowed the propaganda from the internet newsgroups to get you all worked up about the death of ham radio. Of course kit building is at an all time high and QRP clubs growing exponentially but yes were dying.

Ramsey Company started a few years ago selling simple 'one chip' kits and now have a full line catalog 2/6m/70cm tranceivers, Digital HF rigs, they are also dying.

The NorCal QRP club was started and in just a few years has close to (if not more) than 2000 members, building, designing, having contests, get togethers, I believe the last number was about 750 pc of the 38 Special QRP rig were sold. They are all dying too.

Wilderness Radio Co. was started just to handle all the kits that the NorCal club were desinging and building, Tranceivers, tuners, freq displays & keyers. All dying...

Radio Shack opened a brand new Store called Tech America, I hear they carry amateur gear and accys. They are dying.

Better get that equipment sold and let your license expire before your dead too.

Tim, ka8ddz

> NRA & NRA-ILA

I have to say jack, you see things the way I do. Just look at how thay poke fun at use here. Just a crying and wine. That just go's to show you how thay act on HF. Plus like you say the VHF, UHF people are the best I have found. I never plan to upgrade. I like VHF, and UHF just fine. I love all the truck drivers on there that have got there Ham Licences due to the loss of CB radio to the 14.313 ers in my area. I have my radio back. I'v found that more of the people on 2m are from the CB too. Can't use it anymore. But at the sametime I don't want them CB ers getting access to Ham radio and turning it into a 14.313 on VHF and UHF. We are starting to have problems with that here in the Tampa and polk county area. :(SO that Code keep's them down there. For all thay want out of ham radio is HF. So to talk DX, and I'm sure start POWER WARS, ect. just like on the CB here and other area. I don't want code to be droped. I like it just as it is and so do all my friends.

One inexpensive surge protector I bought a while back stated on the box
that when the neon no longer glows steadily, no surge protection exists.
In other words, the MOV did its job but died in the process. The neon
flicker is a memorial.

Good luck,
Steve Robertson

This is all a BIG waste of our time. Ham will not die, but it will change as time goes on. Like it always has! Except that some of the growing pains are lasting a little longer these days...
The arguing is pointless and harmful, and shows how stupid some of this hobby/services' practitioners are. Don't do yourself an injustice by showing all of us how low you can get.
In other words, GROW UP, and let ham radio grow up with you!
There are much more important things in this world to get into a tangle over!

Source record: 191380

You HAMs always seem to know all about this kind of stuff, so...

Please point me in the right direction if this isn't the best place.

I am planning on taking a "care team" for a disabled person on a cruise to the Eastern Carribbean. I wish to be able to communicate with other members of the care team while we are on board the ship (and during shore excursions--maybe).

I'm trying to find a radio that will allow me to do this, but the ship is 918 feet long and 13 steel decks high. Is there a radio that will get me through that much steel?

I have tried an Ericsson (with GE's name on it) NPC-50 Portable Radio Unit that TXs in the range of 151.6250-158.4000MHz. While we didn't try this on board a ship, we were disappointed with its performance on land (range seemed to be only about 2 miles over fairly open area).

Any suggestions appreciated.

TIA

An interesting note not mentioned and little appreciated, is that many radio DES devices do not implement the full DES with feedback, instead, they use what is known as "electronic code book" mode which is no where near as secure as the scrambling done on computer files.

Remember, a radio encryption system must take into account the possiblity that some portion of the transmission may be missed. While re-transmission is an alternative, it is a nuisance for the typical law enforcement users who expect their stuff to work the first time.

"Only a cryptanalyst can judge a code's worth."

Hey, I know it can be done; it'd be nice to print
cards on demand instead of having to get 1000 at
a time.

Changes of address, etc., become easier.

1) Where does one purchase card stock suitable
for mailing as postcards?

2) How does one successfully print 'em without
worrying about displacement of ink?

3) How does one print them without bending 'em up?

Any experiences are welcome. Thanks!

Yes, my attitude has been "crappy" for some time now!

I got my Extra a long time ago when ham radio meant something.
Communication is now just another commodity, and ham radio is dying a
slow death [well documented on the newsgroups such as this one]. I
will not renew my license!

BTW, tornados seldom take out enough cell towers to prevent
communication. Also, public service officials have access to SATCOM,
thus making hams and there "emergency" communication capabilities
OBSOLETE.

Sell the equipment now while there are still a few [suckers] out
there willing to buy!

As I have stated before, communication today is just a commodity. Ham radio is dying [as documented on the newsgroups and over the air]. Ham radio is irrelevant to public safety. How long will the public allow a few of us to use PUBLIC FREQUENCIES for what now amounts to little more than a [boring] hobby. Public Service people don't need us when they have access to cheap cell phone and SATCOM technology.

I have had my ham license for over 25 years --- I will not renew! I have sold most of my radio equipment. I suggest you sell yours while there are still a few [suckers] out there willing to buy!

SB PROP @ ARL $ARLP035
ARLP035 Propagation de K7VVV

ZCZC AP35
QST de W1AW
Propagation Forecast Bulletin 35 ARLP035
From Tad Cook, K7VVV
Seattle, WA August 29, 1997
To all radio amateurs

SB PROP ARL ARLP035
ARLP035 Propagation de K7VVV

The past two weeks have been generally good for HF propagation, with the solar flux above the average (73) for the previous 90 days on all 14 days. The solar flux slid to a low of 74.6 on August 20 and 21, then rose to a peak of 83.8 this week on August 26. Geomagnetic conditions have been very stable.

Based on the previous solar rotation, solar flux was expected to drop below 80 at the end of the first week in September, but as this bulletin is being written it has taken a sudden jump of almost 10 points to 90.5. The activity is from regions 8076 and 8078, which are from an older region splitting in two and becoming more active.

The solar flux has not been this high since November 29, 1996, when there was an exciting flurry of activity that many believed was the start of solar cycle 23. The flux rose above 91 on November 23, and reached a peak of 104.4 two days later.

Conditions should be excellent over the next few days, with solar flux expected to be in the low nineties through the weekend. Geomagnetic conditions should be quiet to unsettled, which means a K index of zero to three.

Based on conditions four weeks earlier, unsettled to active geomagnetic conditions could hit around September 9 and 10, and solar flux is expected

Could this be the long awaited start of a real increase in solar cycle 23? Let's hope so. If we can believe the averages for previous cycles we are surely overdue. Given the rise in solar flux and the gradual change toward the Fall season, HF radio conditions over the next week should be excellent.

Sunspot Numbers for August 14 through 20 were 49, 60, 33, 23, 11, 11 and 11 with a mean of 28.3. 10.7 cm flux was 79.5, 77.7, 77.9, 75.6, 75.8, 74.4 and 74.6, with a mean of 76.5, and estimated planetary A indices were 17, 8, 9, 9, 6, 5, and 5, with a mean of 8.4.

Sunspot Numbers for August 21 through 27 were 11, 11, 11, 0, 32, 30 and 33 with a mean of 18.3. 10.7 cm flux was 74.6, 75.5, 76.5, 77.7, 82, 83.8 and 81.9, with a mean of 78.9, and estimated planetary A indices were 9, 7, 4, 6, 4, 3, and 5, with a mean of 5.4.

What an absolutely BRILLIANT response! I suppose it doesn't matter that in
most cases, there will be some subjectivity in the judgement process
regarding whether the operation is up to "standards" or not. I guess YOU
are the final arbitor of operating "correctness" and we will all be judged
by YOUR standards.

Most of you small-minded "cops" are just looking to compensate for some
inadequacy and need to feel validated. If you run around with your little
badge on, "correcting" people, you had better damn-well be right yourself,

and with documentation to back it up.

In most cases, you'll accomplish nothing anyway, so why clutter the airwaves?

Dave
K9XK (yes, another long-time ham who , I guess, has a license to madly spin my VFO knob looking for "violations of protocol")

The question is, why won't HRO or the other radio stores offer this as a service to hams who are buying new equipment at the store, or even as an additional service to those who just want to pop in to the store and have it done (for a very minimal charge)?

It has been suggested to HRO before, but they weren't interested.

Lou is retiring. Azden is pulling out of the US market (sales wise).
They will continue to service and provide tech support "for awhile".
They made a good product, but by their own admission, not an up to date
one.

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

73,

John Seney

>
Samson, I am sure there is. I haven't had any contact with ayone out
that way since I moved back here in 92, but I used to listen to a few on
both the 20 and 40 meter spectrum.

Anyone else in here from that part of the world willing to help?

Ericc.

There are none that I know of, and this is generally true in all states.
20M is generally used by traffic-handlers only for TransContinental Corps
purposes. 40M is mainly used for Area Nets, on phone, in the afternoons,
and these nets are only for designated reps from/to the TCC and the
various 75M SSB/80M CW Region Nets, which are in turn populated by
designated reps to/from Section Nets, which meet in most cases on
75M SSB around 5pm local time and at 7 and 10PM on 80M CW. All
this can be noted in the ARRL Net Directory, which also contains listings
from all nets, NTS-affiliated or not, which fill out the form and send it
in.
The reason for all this is simple -- each band is suited for the
distances
the Section, Region and Area nets need to cover, as 20M is for TCC ops.

I might add that "poor" antennas, such as low-slung 80M dipoles or
severely shortened 80M dipoles, will put you in very good stead on the
large number of 75phone and 80cw traffic nets, since the distance covered
by such antennas is usually 200 miles or thereabouts, and thus actually
perfect for the purpose. So, if space is an issue, you might want to look
into a shortened antenna so you can use 80/75. Good luck!

You might also wish to contact your Section Traffic Manager, who can be
found in the news for your ARRL Section, in QST Magazine. If none is
shown, contact your Section Manager from the front of QST, or your
Director,
also in the front of the magazine. I have not checked your location on
the Internet
yet, but you surely also have a 2M Local Net (traffic) in your immediate
area, and
the manager, or members of, that net can help you and will welcome you as
a
traffic-handler.

Also many of the post-WWII hams were trained in the military during WWII. My uncle was a Navy trained radioman and served on a fleet oiler in the Med, Atlantic and later the Pacific. He got his ham license just after being discharged so he could keep in touch with his Navy buddies. Many of the WWII radio operators did the same.

Just like the baby-boomer generator, the WWII ham boomer are aging and dying out. That's one reason why the average age is high.

Speaking of QRP, does anyone put out a QPR wattmeter kit that will
measure in the millawatt range?

Message-ID: <01bcb4df$6991c9c0$95835fcc@dialinxx.phoenix.net>
Source record: 191317

I have recently inherited a Collins 312B Station Control box that I would like to hook up, but I am not sure exactly how. I run nets from my location often and would very much like to offer 2 way phone patch capability.

This is an old unit, so it is not just as easy as running it inline to the antenna and simply plugging a phone line in. I have an Alas 210 that I will be connecting to it.

What I need to know, is exactly how to hook it up and operate it. The connections on the back are as follows:
Coax in and out (I can figure this much out! <g>)
Anit vox in (1/8" connector)
Anit vox out (1/8")
Audio in (1/8" 4 ohms)
PTT (1/8")
Phone patch out (1/8")
and Phone line screws (2).

I would appreciate the advice of anyone with experience that could help me.

Thanx.....Mack

I have a Yaesu FT-11R, small 2-meter handheld for sale. Excellent condition. FNB-31 (lo-pwr) battery, wall charger. $150.00

Very good handheld. Keypad is small but not so tiny that you fat-finger all the time.

Selling it because I upgraded to a FT-51R dual-bander.

USS Salem is one of the few surviving heavy cruisers (CA) built in the late 40's. This class which included the USS Newport News, USS Salem, and just few others, is arguably the most beautiful warship design ever to slide down the ways.

She served as flagship of the ComSixthFleet and ComUSMedFor for several years, and her communications suite rivaled any afloat, including much larger capitol warships.

I called AES on Friday to check on a price for an Azden HT, after I noticed a drop in price on most of their line. The person at AES told me they (AES) are closing out the Azden line of Amateur equipment. He said he could not comment on whether or not the communications division was closing or not. I hope they do not go under. The more competition lost, the more we consumers lose.

With over 30 million documents on the Web
today, and thousands more being added almost
hourly, it is now harder than ever for potential
customers to find your place on the Net.

Which is why we've developed the Web Promotion Spider for
Windows 95 / NT . This amazing new software
automatically submits your site to over 250 (the
list grows daily) major search engines, directories,
and Usenet newsgroups!

Not only that, The Web Promotion Spider has the ability to
dynamically optimize your website, ensuring
maximum visibility on the Internet - at the same
time recording all registration data in a built in
database.

Originally engineered for use by the professional
advertising industry, this program is easy and
intuitive to use. Beginners will be amazed at how
simple it is to take complete control over their
search engine and index marketing efforts.

But don't be fooled by its simplicity! The Web Promotion Spider
is an industrial strength marketing tool and an
extremely valuable part of any on-line publicity
campaign.

With this kind of power, it should come as no
surprise that many of our customers have built
profitable on-line promotional businesses with this
product and their existing Internet connection!

But don't just take our word for it. The Web Promotion Spider is
available now for FREE immediate download on
a limited trial basis (shareware).

Visit

http://www.cybertools.net/spider

//
If you wish to be removed from future mailings, please reply
with the subject "Remove" and this software will automatically block you

The FCC did in fact open Gate 3 for Advanced Class amateurs on August 6, 1997. As of Friday, August 29, no Gate 3 applications have been granted, however, the FCC has granted Gate 1 and 2 applications received through August 5th - the day before Gate 3 opened.

So, it looks like the Gate 3 grants could come through any day now. Gate 2 grants came through in waves once they atarted, with huge numbers processed on Tuesdays which would show up in the FCC database on Wednesdays.

Good luck and 73,

What you found was the loading coil.

And it is a loading coil for a 150MHz Larsen antenna, with a type
NMO base.

You can unscrew that gray loading coil from the mag base and use
the base for any type NMO mount antenna. The element in the antenna
may be cut for the 2m band as it is, or it may have been trimmed
down for something in the 150 - 160 band.

New elements are cheap. You can get a new stick and put it in that
thing and cut it for whatever freq you want from about 135MHz to
about 165 MHz.

The Chain Link Theorem
"A Unified Field Theory"
by William A. Wetzel

Hypothesis Draft: #1
August 29th., 1997

Recap of ideas:

1) Determinants can solve for particle loop velocities and therefore;
positions! Normal rules for matrix reduction would provide answers
from many dimensions down to three dimensions. This, effectively,
is the solution to the Heisenberg Principle.

2) The topological geometric relationship employed is a double spiral
which results from the signiture of a bipolar particle in motion
and spining while doing so.

3) Phenomena is now explained consistantly at all levels:

a. Galactic spins - as matter is drained from our universe
b. Atomic particle spins - the behaviors of wave mechanics
c. Quark spins - which determines character of matter
d. Trajectory spins - (I) path and type of matter from

Quasars and Pulsars
(II) path and type of matter that
is consumed by black holes

*** which is a net gain in our universe, because of expansion...
and a net loss in the image universe, because of contraction...

Since this is a scientific deterministic model; the corollary of this
may indicate that the double helix is subject to the higher principle
of this matrix, and could eliminate Darwin's "Origin of a Species" from
acceptance because "random chance" is removed.

*** this does not invalidate evolution, it just redefines it...

The first publication will be the hypothesis, until it is verfified
by a supercomputer run with good results.

3W, CON DAO ISLAND (Vietnam). The "DX News Sheet" reports Yuki, JI6KVR, will activate a new Vietnamese IOTA October 14-20th. This island is in the Con Son Group (b). The callsign was not given. QSL via JJ6LXX (JA) and EA5KB (others).

5A, LIBYA. By the time you read this, an Austrian group here will activate their 5A28 operation. Activity should last until September 7th. QSL via OE2GRP or bureau.

5H, TANZANIA. Harald, DL7VSN, informs OPDX that he will be traveling to Uroa/Zanzibar from September 7-27th. He has already received his licence from the Tanzanian Communication Commission. The callsign he will use is 5H/DL7VSN. He added that Fabio, 5H1FS/I4UFH, was the last person to receive a real Tanzanian callsign for a temporary stay. Harald plans to be active on 80-10 meters mostly in CW. If conditions are right (along with the palmtrees and other factors), he will also try to be active on 160 meters. QSLs are OK via the bureau. After his travel, Harald will publish the log on his WEB homepage:
http://home.t-online.de/home/0309314613-0001/dl7vsn.htm

5X, UGANDA (160 meters!). Paul, 5X4F, states, "Yes I'm still set up for 160. The band is very noisy yet. I will start listening 30 minutes before sunrise after September 9. Sunrise is approx. 0350z on the 9th and 0346z on the 30th. I also get on some times between 2300-2400z, if I'm not too tired. My usual frequency is 1.824."

A4, OMAN. The "DX News Sheet" reports that Chris, SP5EXA (ex A71CW), will be going to Oman on September 11th where he will be active for the next five years. He is currently waiting for a licence.

A4, OMAN (ROARS 25th ANNIVERSARY). The Royal Omani Amateur Radio Society (ROARS) will celebrate its 25th Anniversary (Silver Jubilee) from October 1st to December 31st. All A4 stations should use their callsigns followed by /SJ to commemorate the 25th anniversary of the Society. The Society will be operating a Special Event Station at their site on Athaiba Beach under the callsign A43XXV during the period from December 17-21st. To commemorate their Silver Jubilee, the Society has introduced the "ROARS Silver Jubilee Award" for the Radio Amateurs worldwide. ADDED NOTE: Details on this award will be sent to all OPDX InterNet Subscribers (Thanks to 4X6UO).

A6, UNITED ARAB EMIRATES. "The Daily DX" reports that David, K3LP, will be operating from November 22nd to December 2nd as A61AJ. Activity will be on all bands CW and SSB. David will also be an entry in the CQ World Wide CW DX Contest as a single operator on all bands with two rigs. QSL for this operation only to K3LP (ex AA6DC.)

AP, PAKISTAN (Update). Hiro, JA1EZM, continued to be active as AP2AP despite the message put out by the PARS stating he was not properly licensed (refer to OPDX.318). However, Jun, JA7SSB, states he has talked to Hiro and he insists that his license is good. Hiro will expand his operations during September.

CU, AZORES. Maike, DL4XS, and Dieter, DL3KDV, will be active from here again as CU2/DL4XS and CU2/DL3KBV, from September 1-15th. Look for them on 20 and 160 meters. QSL to CBA (via bureau).

FS, SAINT MARTIN. Eddie, EA3NY, will be active as FS5PL during the CQWW RTTY Contest (September 27-28th). He will try to use more than 150w during this contest, but he has a problem with power lines. Eddie will use 3 diferents modems, 3 diferents DSP filters, 3 diferent computers, and he will be able to receive on 3 diferents stations on different frequencies at the same time. He suggests to PLEASE BE PATIENT, he knows that most people need FS in RTTY and he will do his best.

HV, VATICAN. With the efforts of IK0FVC and I0JBL, look for HV4NAC to be active during the 1997 CQWW RTTY Contest (Sept. 27-28). Other operators will include W6OTC, K6AW and W6OSP. Before the contest, look for activity on CW and SSB as time permits.

J2, MOUCHA ISLAND (Djbouti). Dominique, J28YC, and some others will be active as J28YC/P from his Djiboutian island located in the Gulf of Aden Group (IOTA AF053). This will be a short operation from September 3rd (on the afternoon) to September 5th. They will be active on all bands (except WARC bands) on SSB.

KH3, JOHNSTON ISLAND. Just a reminder that Al, KK5ZX, should be active from here by the time you read this. He will be on the island until October 1st. Activity will be from the club station on 160-10 meters, mainly CW, but there will be some activity on SSB. QSL via K3SX,

5008 Red Hill Road, Keedysville, MD 21756 USA.

KP5, DESECHEO ISLAND. Several DX bulletins report that Vance's, W5IJU, request for landing permission on KP5 has been denied due to "unsafe and dangerous conditions on the island".

QSL INFO AND NEWS....
Michael Taylor, NF4W, of South Carolina (USA), states he would like to become a QSL manager for any DX station. He also states he has plenty of free time on his hands and could handle the bulk and would guarantee 24 hour turn around to U.S. stations once contact was confirmed by the DX station's log. Use of E-mail for log confirmation would be preferred. If you are interested, Michael can be reached via E-mail at: nf4w@mindspring.com

Declan, EI6FR, from the WestNet DX Group, informs everyone he is still awaiting the delivery of the GI/EI7NET Rathlin Island (EU-122) QSL cards. These cards are being printed in Italy by IK1MPL. As soon as he has the cards he will immediately answer the direct requests followed shortly thereafter by a bureau posting to all stations in the log. "Thank you for your continued patience," Best 73's de Declan EI6FR

All direct QSL requests for HP1XBI/4 for Bocas del Toro (IOTA NA088) have been sent out.

F6BFH states he has sent all direct QSL requests for G/F6BFH from Scilly Isles operation (during last July) have been sent out.

F5LGQ states he has sent all direct QSL requests out for XT2DB.

QSLs for OL7HQ (IARU HF Contest 1997) go to QSL Manager OK1MD via the bureau or direct: Mlados Doucha, OK1MD, Kodanska 87, CZ-10100 Praha 10, Czech Rep.

CO8TW can now be QSLed via W3HNK, Joe Arcure, P.O. BOX 73, Edgemont, PA 19028. Juan, CO8TW, can still be contacted at: Juan Carlos Veranes, PO BOX 8, Santiago de Cuba CP 90100, CUBA or via InterNer E-mail at: co8tw@co8rci.uo.edu.cu

Didier, F5NZO, states he is still QSL Manager for FT4YD (1991), FT5XL (1997), PA/F5KBF (1992) and also OY/ TF/ and TF7/F6AMI (1991). He can be reached via E-mail at F5NZO@AOL.COM.

WP2Z, the Windwood Contest Station on St. Croix, USVI, is a very active ham radio rental property which normally has a different operator for each major contest. This means that there is usually a different QSL Manager for each operation. Well, the QSL confusion may have come to an end. Steve Wheatley, KU9C, has agreed to become the QSL Manager for WP2Z. Please QSL all future WP2Z operations via KU9C. They hope that directing all QSL requests to one manager will end the confusion regarding WP2Z QSL routes. Please forward all WP2Z QSL requests to Steve at either: POB 5953, Parsippany, NJ 07054 or via the bureau.

QSL Online! The following was written by Goran, SM0DRD: "An interesting idea is developing at SK0UX. You may search logs for your QSOs and then download QSLs immediately to your own printer. We believe this is a first and the concept has already generated a lot of interest. The potential savings are enormous. We have already received requests from hams who want to set up their own QSL Servers and have one beta test site in the works. QSLs special event calls which we have used are SK0HQ and SK0RQ as well as club members are also available. During the CQ WW CW in November, we will make a field test on making QSLs from our expedition to Cuba (T48RCT) available within hours after your contact! Logs will be 'uploaded' to Sweden to the QSL Server via AMTOR. This concept conserves trees, time, and many other good things. Check it out for yourself at http://ham.te.hik.se/clubs/sk0ux.
The QSLs are typografically the same as a 'snail-mailed' card and may have pictures. Suggestions are very welcome since new possibilities are developing almost daily, E-mail to: goran@tjansteforbundet.se."

T9, BOSNIA (Update). Kent, WT0Q, has sent the following update to the information that was reported in OPDX.319 last week. QSLs for T9/WT0Q need to go to his home call, WT0Q, which is okay in all callbooks for the past 5 years. Dale, N2NDY (T9/N2NDY), needs his QSLs sent to DA2DM, his German call, where he will return to this fall. Dale is currently using a dipole at 50 feet with an MFJ Tuner. His radio is a TS-450SAT. Kent is using an IC-761 into a Hygain DX77 vertical at 8 feet, also via an MFJ tuner. They will be on the air as their respective schedules permit for the next 4 to 8 weeks.

TJ, CAMEROON. Cecil, NW8F, who is the QSL Manager for Mark, TJ1US (ex-J5UAI), provides the DX community with the following schedule which will be Fridays only for now with Saturday coming at a later date:
1800-2100z - 14085 kHz RTTY 0200-0400z - 7020 kHz CW
2100-2130z - 10104 kHz CW 0400-0500z - 3510 kHz CW
2130-2200z - 14050 kHz CW
Nothing has been mentioned about 160 meters yet, but Scott, K8SM, is in communication with NW8F to help or advise in obtaining something for 160 meters. For those of you that have interest in 160 and would like to help Mark get some kind of antenna, contact NW8F@JUNO.COM.

TY, BENIN. Sigi, DJ4IJ, is now active until September 19th as TY1IJ. Activity has been on 40, 30 and 20 meters, CW and SSB. QSL via DK8ZD.

V3, BELIZE. "The 59(9) DXReport" states Jay, K0BCN, will sign V31MX from Caye Caulker, October 21-29th. Activity will be on 20-10 meters, CW and SSB.

V4, ST. CHRISTOPHER AND NEVIS. The "DX News Letter" reports Joe, V47CA, will be active again around the CQWW DX CW Contest between November 16th and December 1st. QSL via homecall VE3BW.

VQ9, CHAGOS ISLANDS. Start looking for Pres, N6SS, to be active once again from here as VQ9SS. Activity will last until November. Look for him to be active on 160 meters. QSL via CBA.

ZG, GIBRALTAR. Martyn, G3RFX, will be active as ZG2FX from September 3-10th, to help celebrate Gibraltar National Day. Outside the celebration, he will sign as ZB2FX. QSL to home call.

Hello,

Do you realize hundreds of thousands of dollars exchange hands
each day through internet marketing. How many times have you said
"I wish there was a way to make money with my computer"? This is
your chance. You will ask "Can I really make money with this?"
And the answer is a definite YES! This is a simplified form of
email marketing and requires a very low investment. If you don't
try this program at least once then you'll always wonder how you
would have done.

"THINK ABOUT IT"
Before you delete this program from your mailbox, as I almost did, take
a little time to read it and REALLY THINK ABOUT IT. Get a pencil and
figure out what could happen when YOU participate. Figure out the
worst possible response and no matter how you calculate it, you will
still make a lot of money! Definitely get back what you invested. Any
doubts you have will vanish when your first orders come in. IT WORKS!
Paul Johnson, Raleigh, NC

HERE'S HOW THIS AMAZING PROGRAM WORKS!
Let's say that you decide to start small, just to see how it goes, and
we'll assume you and all those involved send out 2,000 programs each.
Let's also assume that the mailing receives a .5% response. (That's HALF
OF ONE PER-CENT!!) Using a good list the response could be much better.
Also many people will send out hundreds of thousands of programs instead
of 2,000. But
continuing with this example, you send out only 2,000 programs. With a
5% response, that is only 10 orders for REPORT #1. Those 10 people
respond by sending out 2,000 programs each for a total of 20,000. Out
of those .5%, 100 people respond and order REPORT #2. Those 100 mail
out 2,000 programs each for a total of 200,000. The .5% response to
that is 1,000 orders for REPORT #3. Those 1,000 send out 2,000
programs each for a 2,000,000 total. The .5% response to that is
10,000 orders for REPORT #4. That's 10,000 five dollar bills for you.
CASH!!!! Your total income in this example is $50 + $500 + $5000 +
$50,000 for a total of $55,550!!!!

REMEMBER FRIEND, THIS IS ASSUMING 1,990 OUT OF 2,000 PEOPLE YOU
MAIL TO WILL DO ABSOLUTELY NOTHING... AND TRASH THIS PROGRAM!
DARE TO THINK FOR A MOMENT WHAT WOULD HAPPEN IF EVERYONE
OR HALF SENT OUT 100,000 PROGRAMS INSTEAD OF ONLY 2,000. Believe
me, many people will do that and more! By the way, your cost to
participate in this is practically nothing. You obviously already have an
internet connection and email is FREE!!! REPORT#3 will show you the best

methods for bulk emailing and purchasing email lists.

THIS IS A LEGITIMATE, LEGAL, MONEY MAKING OPPORTUNITY. It does not require you to come in contact with people, do any hard work, and best of all, you never have to leave the house except to get the mail. If you believe that someday you'll get that big break that you've been waiting for, THIS IS IT! Simply follow the instructions, and your dream will come true. This email order marketing program works perfectly...100% EVERY TIME. Email is the sales tool of thefuture. Take advantage of this non-commercialized method of advertising NOW!! The longer you wait, the more people will be doing business using email. Get your piece of this action!!

INSTRUCTIONS

This is not a chain letter, but a perfectly legal money making opportunity. Basically,this is what we do: As with all multi-level business, we build our business by recruiting new partners and selling our products. Every state in the USA allows you to recruit new multi-level business partners, and we offer a product for EVERY dollar sent. YOUR ORDERS COME AND ARE FILLED THROUGH THE MAIL, so you are not involved in personal selling. You do it privately in your own home, store or office.

This is the GREATEST Multi-level Mail Order Marketing plan anywhere:

Step (1)Order all four 4 REPORTS listed by NAME AND NUMBER. Do this by ordering the REPORT from each of the four 4 names listed on the next page. For each REPORT, send $5 CASH and a SELF-ADDRESSED, STAMPED envelope (BUSINESS SIZE #10) to the person listed for the SPECIFIC REPORT. International orders should also include $1 extra for postage. It is essential that you specify the NAME and NUMBER of the report requested to the person you are ordering from. You will need ALL FOUR 4 REPORTS because you will be REPRINTING and RESELLING them. DO NOT alter the names or sequence other than what the instructions say. IMPORTANT: Always provide same-day service on all orders.

Step (2)Replace the name and address under REPORT #1 with yours, moving the one that was there down to REPORT #2. Drop the name and address under REPORT #2 to REPORT #3, moving the one that was there to REPORT #4. The name and address that was under REPORT #4 is dropped from the list and this party is no doubt on the way to the bank. When doing this, make certain you type the names and addresses ACCURATELY! DO NOT MIX UP MOVING PRODUCT/REPORT POSITIONS!!!

Step (3) Having made the required changes in the NAME list, save it as a text (.txt) file in its own directory to be used with whatever e-mail program you like. Again, REPORT #3 will tell

you the best methods of bulk emailing and acquiring email
lists.

Step (4)E-mail a copy of the entire program (all of this is very
important) to everyone whose e-mail address you can get your hands
on. Start with friends and relatives since you can encourage
them to take advantage of this fabulous money-making
opportunity. That's what I did. And they love me now, more
than ever. Then, e-mail to anyone and everyone! Use your
imagination! You can get email addresses from companies on
the internet who specialize in email mailing lists. These
are very cheap, 100,000 addresses for around $35.00.

IMPORTANT: You won't get a good response if you use an old list, so
always request a FRESH, NEW list. You will find out where to purchase
these lists when you order the four 4 REPORTS.

ALWAYS PROVIDE SAME-DAY SERVICE ON ALL ORDERS!!!

++

REQUIRED REPORTS

Order each REPORT by NUMBER and NAME

ALWAYS SEND A SELF-ADDRESSED, STAMPED ENVELOPE
AND $5 CASH FOR EACH ORDER REQUESTING THE
SPECIFIC REPORT BY NAME AND NUMBER. DO NOT SEND
MONEY ORDERS OR CHECKS! MOST PEOPLE USE A BUSINESS
NAME THAT THEY DON'T HAVE A BANK ACCOUNT FOR!

note***
This mailing was done by a professional bulk mail service and
the person for whom this mailing was done has no knowledge
or responsibility for how the mailing was done!

307 Heatherstone
Columbia, SC 29212

CONCLUSION
I am enjoying my fortune that I made by sending out this program. You too, will be making money in 20 to 90 days, if you follow the SIMPLE STEPS outlined in this mailing.

To be financially independent is to be FREE. Free to make financial decisions as never before. Go into business, get into investments, retire or take a vacation. No longer will a lack of money hold you back.

However, very few people reach financial independence, because when opportunity knocks, they choose to ignore it. It is much easier to say "NO" than "YES", and this is the question that you must answer. Will YOU ignore this amazing opportunity or will you take advantage of it? If you do nothing, you have indeed missed something and nothing will change. Please re-read this material, this is a special opportunity. If you have any questions, please feel free to write to the sender of this information. You will get a prompt and informative reply.

DON'T DELAY! MAIL IN YOUR REQUESTS FOR THESE REPORTS IMMEDIATELY!

"Junk radios?" Which ones are you speaking of, OYE BOY? I proudly run a
Undien HR-2510 in my car as do many others. Receive, transmit, modulation,
and overall reliability are all excellent. Hardly a "junk radio."

Jim, I can see what you are saying, many extra, advanced, general and so on license class holders are all for the removal of the code, please don't think I'm bashing all of them, however, as for the worn out arguements, I still get E-mailed plenty of those, and a few personal feelings thrown in for good measure, like crying and whining, etc, I feel (my opinion) that we will indeed see the removal (NOT THE END) of C.W.

I was considering buying one of these for 10 meters since the price was
right. Do they hold up?

Cross-posted to: aus.radio.amateur.misc,rec.radio.amateur.misc,rec.radio.info

This is the Australian National Amateur Radio Teleprinter Society
with our Weekly Rtty Broadcast. We transmit on the following
frequencies and times :
3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)
7.045 MHz -3 0030 UTC VK2CTD (COL)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)
14.091 MHz 0030 UTC VK2DPM (ALAN)
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2WI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 973 24TH AUGUST 1997

COLS COLUMN

SORRY FOLKS BUT I AM STILL SUFFERING FROM THE EFFECTS OF FOOD
POISONING, SO WILL NOT BE ABLE TO DO THE COLUMN AGAIN THIS
WEEK.

ONE PIECE OF INFO THAT I HOPE WILL BE OF BENEFIT TO THOSE
STATIONS IN THE NSW AREA AND UNABLE TO COPY THE CAST ON 40
METRES. COMMENCING THIS WEEK I WILL LEAVE MY SYSTEM RUNNING,
SUNDAY AFTERNOONS, ON 80 METRES, 3542 KHZ. I SEND THE
BROADCAST TO THE VKNET ON PACKET AFTER THE MORNING
TRANSMISSION. SO LOOK FOR ME ABOUT HALF AND AFTER THE
BROADCAST. MY SYSTEM WILL BE LEFT IN THE MAILBOX MODE,
ACCEPTING EITHER AMTOR (ARQ), OR PACTOR CALLS. IT WILL BE
TAKEN OFF AIR APPROX 1800 EST. ONCE LOGGED ON, JUST FOLLOW THE
PROMPTING AND REQUEST THE CURRENT CAST, OR ANY OTHER MESSAGE
IN THE MAILBOX.

73S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(15 AUGUST - 21 AUGUST)

ISSUED ON 22 AUGUST 1997

SUMMARY
Date 15 16 17 18 19 20 21
10cm 78 78 76 76 74 75 75
A 8 8 10 8 5 5 (9 EXPECTED)
T 28 24 17 22 26 18 19

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET 16TH, AND 18TH TO 20TH AUGUST; AND QUIET TO UNSETTLED OTHERWISE.

MAXIMUM USABLE FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES 15TH TO 19TH, AND NEAR PREDICTED TO SLIGHTLY DEPRESSED ON 20TH AND 21ST. SPREAD F WAS OBSERVED ON 19TH AND 20TH AUGUST.

FORECAST (22 AUGUST - 28 AUGUST)
SOLAR: VERY LOW

GEOMAGNETIC: QUIET UNTIL 26 AUGUST THEN UNSETTLED TO ACTIVE CONDITIONS EXPECTED 26-28 AUGUST.

FREQUENCIES: NORMAL UNTIL 27 AUGUST THEN 15-20 PER CENT BELOW PREDICTED MONTHLY VALUES 27-28 AUGUST.

Notes of Interest:

Guadeloupe, FG - John, EA3CB is QRV as FG/EA3CB and spotted in this week bandpass. He is scheduled to stay until August 17. QSL via his home call or buro

St. Pierre et Miguelon,FP, Rich, K2RW is QRV on rtty as FP5AA, 14-18 August

Spratly Isl, 9M6OO/p, as scheduled by N2OO and N0RN are qrv from Spratly. No spots on rtty has been received as of Thursday night, although they have been on ssb/cw.

Libia, 5A28, this dxpedition is still on schedule August 31 to Sept. 7. QSL via OE2GRP. I spoke with the group leader Gunter, OE6DGG, who reemphasized that OE3SGU and OE2KTO would be the rtty op's and would have a station exclusively for RTTY with a 3 element beam. They will be looking for stateside especially in their early mornings and evenings.

Ceuta, EA9, Frank EA5RD and Kim, EA5ND will be active Sept. 6 and 7 signing EA9/home call including RTTY.

Saudi Arabia, HZ, N7CVJ will operate from HZ1AB in the CQWW RTTY contest, Sept. 27 and 28.

The VK2SG RTTY DX NOTES are also available on the Internet at the digital-dx relector. You can become a subscriber to this digital mailing list by sending an e-mail to
digital-dx-request at st.rim.or.jp
subject: subscribe
body: your call, your e-mail address

Also available through the OH2BUA Webcluster at
http://www.clinet.fi/(tilde)jukka/rtty.html

For next weeks bulletin send your bandpass and notes of interest to Luciano, I5FLN at iol.it, or via packet to I5FLN at ITOS.ITA.EU

If you make it to the New Orleans International DX Convention August 22nd and 23rd we'll see you there. It's always a blast, DX, excellent food and entertainment.

73 and good DX de Randy WX5L at W5KSI.9HASH)NOLA.LA.USA.NA
e mail: wx5l at I-10.net

ARLD035 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, the 425 DX News, The 599 Report, The Daily DX, The DXNS and Contest Corral from QST. Thanks to all.

SVALBARD, JW. Kjell, SM7NAS, will sign JW/SM7NAS from August 29 to September 1, from the QTH of JW5E. Expect operation on 20, 15 and 10 meters, plus the newer bands if possible. QSL to Kjell Adolfsson, Dalbovagen 16B, S-59096 Overum, Sweden.

NEPAL, 9N. 9N1BV has been active on 14015 and 14180 kHz between 1200 and 1500z. QSL via JA1PBV.

MAYOTTE, FH. Look for Volkmar, FH/DF2SS, on CW on 18077, 10109, 3505 and 1840 kHz. QSL via DF2SS. Giuseppe, IK4NQW, will be QRV from August 21 to September 2 as FH/IK4NQW/P. QSL via home call bureau or direct.

LIBYA, 5A. The OE1XIC 5A28 DXpedition is expected to be QRV from August 31 to September 7. QSL via OE2GRP.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 318

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, K4PC, N4GN, W4FOA, W4NS, WB2YQH and WB2RAJ THE 59(9) DXReport, AA7AV, K7JJ, AP2TJ, BV/N0IAT, CX8DX, EX0V, 9M2OM/G3NOM, 9M2TO, G3SWH, G3SXW, G4BUE and DX News Sheet, JA4DND, PS7AB, RA1QHJ, SM7NAS, SP2FOV, VK4LW and VK4AAR for the following DX information.

AP50, PAKISTAN. Tariq, AP2TJ, reports to OPDX that the digital station AP50NK will be active in Amtor/Pactor/Gtor (auto-reply) on mark frequencies 14065 kHz (0300-1700z) and 7038 (1700-0300z). Contacts with AP50NK will qualify as a QSO for

the AP50 Golden Jubilee award.

BU, TAIWAN. Prefix Hunters start looking for this new prefix 'BU'. Look for BU0DX on the ham bands, especially 20 meters CW. QSL to BV200: c/o CTARL, PO Box 73, Taipei, Taiwan, Republic of China.

ER, MOLDOVA. Chris, K4PC, will be leaving with a team of workers on September 27th for a two week missions trip to work in some children's orphanages in Moldova. They will be installing hot water heaters, weatherstripping windows and installing FM radio receivers for the children to listen to broadcasts. If any spare time becomes available, Chris is hoping to operate RTTY, CW and SSB on 40, 80 and 160 meters.

EX0, KYRGYZSTAN. Valery, EX0V (ex-UM8NU), reports he is now active on RTTY (thanks to Juanjo, EA3CB, for a gift computer). Look for him on 14080 kHz +/- QRM around 0100-0300 and 1200-1800z. He also plans to be active on the other bands (80-40-30 meters).

HB0, LIECHTENSTEIN. Henry/SP2FOV and Kazik/DL2SBY will by active from here as HB0/SP2FOV and HB0/DL2SBY, from Augsut 20-27th. They plan to be active on 80-10 meters on CW, SSB and RTTY. QSL via home call.

KH0, MARIANA ISLANDS. Skip, JE2HCJ, is planning to go to Saipan in the Northern Mariana Islands from August 22-25th. He plans on using the callsign N2PQE/KH0.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or fax to (02) 9672-3392.

Email address for the Broadcast Officer is :
patl(at)conmusic.usyd.edu.au
or patl(at)mail.users.usyd.edu.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. Hope to hear from you.

COLS COLUMN WILL NOT APPEAR THIS WEEK AS HE HAS BEEN ILL. LETS

WISH COL ALL THE BEST FOR A SPEEDY RECOVERY. COL HOPES TO BE

ON AIR THIS WEEKEND WITH HIS RELAYS AS USUAL. HAVE A WORD WITH

HIM THIS WEEK OR NEXT.

RTTY - HOW IT BEGAN - PART 9

BY VK3KF ERIC FERGUSON

During the late 1960's and early '70s I did find a little more

time for amateur RTTY and although I had gained the W.A.C

certificate (worked all continents RTTY) as early as 1962, 1

had not caught up with the swelling number of countries which were appearing and I set about chasing a DXCC on RTTY. This was not all that difficult as various overseas amateur organisations had introduced world wide contests during which, some rare ones would appear to be pounced upon by all and sundry in sometimes hectic 'dog piles' and by 1971, 1 had achieved the objective and have not kept an accurate record since about 74, when I had a listing of 131 countries.

As a measure of early RTTY activity,l recently examined a 'W.A.C. Honour Roll' published in 1965 in which 79 stations were listed and out of curiosity, I checked to see how many or these made the listing by contacting VX3KF for the award and was surprised to find 56 out of the 79 relied on VX3KF for the Oceania continent. I also noted my own listing as Nr.23 which agreed with the certificate on the wall. Most of us patiently had to wait until 1962 for Africa to appear when ZS6UR came up on air.

I suppose I have missed a great deal in trying to bring to light some of the early RTTY activities in Australia. Other stories may come to mind later on, but enough for now. During the years of amateur involvement with RTTY, I must say that I have enjoyed them. There have been frustrations and at a time when I had to choose between having the XYL leave the house or I, myself, leave, I decided the latter as I had found in the past, her cooking agreed with me and I was never adept in the art of ironing shirts with the result, VK3KF equipment had to be moved. The car was banished from the garage, its bare and draughty walls lined with heavy caneite to make it reasonably sound proof and here the 'shack' remains today.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(08 AUGUST - 14 AUGUST)

ISSUED ON 15 AUGUST 1997

SUMMARY

Date 08 09 10 11 12 13 14

10cm 78 78 78 80 81 82 80

A 7 10 8 10 7 17 (12 EXPECTED)

T 20 18 25 24 20 24 33

SOLAR ACTIVITY WAS VERY LOW ON 8TH, AND 12TH TO 13TH, AND LOW FOR THE REMAINDER OF THE WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET 9TH AND 12TH; QUIET TO UNSETTLED 8TH, 10TH TO 11TH, AND 13TH TO 14TH.

MAXIMUM USABLE FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH A 20 PER CENT ENHANCEMENT 1200 TO 16OO UT ON 11TH, AND A 30 PER CENT ENHANCEMENT 0600 TO 1000 UT ON 14TH AUGUST.

FORECAST (15 AUGUST - 21 AUGUST)

SOLAR: VERY LOW TO LOW

GEOMAGNETIC: QUIET TO UNSETTLED

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES

Notes of Interest:

GUADELOUPE, FG - John, EA3CB is QRV as FG/EA3CB until 17

August on CW, SSB, and RTTY. QSL via bureau to his home CBA.

ST. PIERRE et MIQUELON, FP - Rich, K2RW, will operate RTTY as

FP5AA 14-18 August including the SARTG contest 16-17 August. QSL to his home call.

SPRATLY Is., 9M - A reminder... N0RN and N2OO will be QRV from 14-18 August with RTTY (equipment courtesy of AA5AU). Call may be 9M0OO OR 9M6OO. QSL to N2OO.

ZIMBABWE, Z2 - The start of the operation of Z2/N9YXA originally scheduled for 3-21 August was delayed two days. QSL to home CBA.

The VK2SG RTTY DX NOTES are also available on the Internet at reflector digital-dx@st.rim.or.jp and the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/rtty.html .

For next week's bulletin, send your bandpass and notes of interest to Randy, WX5L at W5KSI.#NOLA.LA.USA.NA or by e-mail to wx5l@I-10.net .

73 and good hunting de Jules W2JGR at W5KSI.#NOLA.LA.USA.NA

ARLD034 DX news

This bulletin was made possible with information provided by Tedd,KB8NW, The OPDX News, The Daily DX, Chris, G4BUE, The DXNS and Contest Corral from QST. Thanks to all.

SPRATLY ISLANDS. Bob, N2OO, and Bob, N0RN, will be active from August 14 to 18 as either 9M0OO or 9M6OO. QSL via N2OO. Pekka, OH2YY, will be QRV August 19 to 22. Call sign unknown at this time. Check SSB on 40, 20, 15 and 10 meters, and possibly the newer bands.

CAMBODIA, XU. Both Mike, XU6WV, and Harv, XU2FB, continue to be active on 20 meters. Look for them between 1130 and 1430z on 14192, 14195 and 14226.5 kHz.

MACQUARIE ISLAND, VK0. Tom, VK0TS, has become increasingly active over the last few days. Watch for him on 14222 kHz

starting around 0400z and 3799 or 7075 kHz around 1100z.
TRISTAN DA CUNHA, ZD. Ian, ZD9IL, can be found on most bands. His QSL Manager is Edwin, ZS5BBO, and QSLs can be sent direct to Edwin Musto, P.O. Box 211032, Bluff, 4036, South Africa.
MALAWI, 7Q. Eli, IN3VZE, will be active until August 25 as 7Q7CE. Operations will be on SSB on 20, 15 and 10 meters. QSL to home call.
WESTERN SAMOA, 5W. Perry, WH6XY, is active as 5W1PC until November and can be found mostly weekends operating SSB on 15, 17 and 20 meters.
GUAM, KH2. Ray, WH6ASW, will sign WH6AW/KH2 from mid August until December. QSL via VK4FW.
BENIN, TY. Sigi, DJ4IJ, will be active until September 10 as TY1IJ, mainly on 160, 80 and 30 meters. QSL via DK8ZD.
NORFOLK ISLAND, VK9. Kevin, VK9NX, is here for about 2 weeks. He has been heard most days on 80 meters between 1000 and 1200z. QSL via VK2CE.
CHINA, BY. BT1IARU will be operated by IARU Region 3 Conference participants from September 4 to 16.

The Ohio/Penn Dx PacketClusterDX Bulletin No. 317
Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1BB, N1SP, WF1B, KA2D, KC2X, W2UD, WB2YQH & WB2RAJ THE 59(9) DXReport, N3AF, WB3LHD, WA4JQS, AC7DX, EA5RD, G3XTT, G4BUE & DX News Sheet, GJ4ICD, PA3ERC and VE2CND for the following DX information.
CARIBBEAN TOUR. Peter/PA3BBP, Rob/PA3ERC and Ronald/PA3EWP will be active from Cap Estate on St. Lucia (J6), from August 21-30th, as J6/PA3BBP, J6/PA3ERC and J6/PA3EWP. They might be active as J68BP, J68RC and J68WP, but they haven't received a

confirmation yet. From August 30th through September 11th, they will be active from Pigeon Point on Tobago (9Y4) as 9Y4/PA3BBP, 9Y4/PA3ERC and 9Y4/PA3EWP. They will have 2 stations on the air with activity on 160-10 meters with operations on CW, SSB and RTTY. They will also try to work some Satellite RS-12. Their focus will be mainly on the WARC bands and the low bands for Europe during their grayline. Both locations will have an excellent take off to the US and Europe.

CEUTA. Frank, EA5RD, and Kim, EA5ND, will be active from Northern Africa September 6-7th. During their activities, they will sign EA9/homecall. They plan to have two stations active on CW/SSB/RTTY on 80-10 meters (in the usual DX-windows). Contacts made with these stations will be valid for the "Spanish Castles Awards", with the reference number CCE-049 and the location will be the Muralla Real. A special color QSL card will be available. QSL via the bureau or direct to homecall signs.

FG, GUADELOUPE. John, EA3CB, is currently staying on Guadeloupe Island (NA-102) and plans to go to Les Saintes Island (NA-114) next. Look for John to be active as FG/EA3CB on Les Saintes August 15-17th. Activity will be on CW/SSB/RTTY with operations on 40-10 meters (WARCs included). QSL via EA3CB.FP,

JD, MINAMI TORISHIMA. "The 59(9) DXReport" states JD1/JG8NQJ will QRT in late September, one month earlier than expected . He is can be found active on 7010, 10103 and 14027 kHz. QSL via JA8CJY.

Gee another wonderful rabbit out of the very small hat of Drew. A
codeless HF license and a company that does not make HF gear, what a
novel concept. Oh that's right, I gorget, the Drewster advocates illegal
freebanding, so this would fit it his list of illegal activities and
advise.

Get a clue. Make outdated equipment, loss your market. Didn't AEA teach
you anything?

BTW, still waiting for YOUR amateur related accomplishments. I notice
that it's been a number of weeks since you challanged me and still
nothing except many negative and extremely false remarks.

All the best

Yes, what you can do is not worry about it, have you listened to 10m lately? I cant imagine that an AM only 10 watt (or however much power it has) is going to cause me much trouble, what about 28.500 and up? plenty of room there.

Im not saying it's right, but expecting the FCC to do something about it is crazy, hell, just enjoy the hobby and don't worry about what the CB'ers do, they'll get tired of it after a while and then you can buy it at a great price!!

Tim

Im talking of the Galaxys, the Connex, and yes, your miserable little
wanna be Uniden. I believe folks like you are creating this problem,
or at least adding to it..Want to be involved in Amateur radio but
all you do is hang out on CB and brag to your friends hw smart you
are because you got a ticket.. Dont take long to figure your type
out after reading a couple of your postings...Go back to 11 mtrs,
maybe you can fool someone there..John KD4AFW Real Amateur,Real
Radio, Real hung up on protecting our bands!!

After reading some of the postings coming to this group out of
Sunny Florida, the riff raff filter approach sounds good and simple.
Im limited to 10 mtrs up, but I have something to work at.
To me, the priveleges would be cheapened if it were made easier.As for
Codeless HF, No way , there are plenty as it is, thanks to the
likes of Ole Man Copper sellig out of band radios...Johnboy

>amateur radio, without cw, be better?

The use of CW keeps dropping in any case. Note
too that elimination of code testing need not be the end of CW
use. No one on the no-code test side of the issue
has suggested any ending of CW use.

>I am trying to visualize amateur radio without the cw subbands.

As for those CW subbands, there are none anyway.
There are only two exclusive CW subbands and both are
VHF, not HF.

I suggest either the newest Newsline, or the ARRL letter for information to the contrary. Azden is ceasing the sale of amateur radio gear in North America, the operation in NY will continue however, and apparently warranty and other service will remain available.

Hello Out there.

Does anybody know how to connect a microphone to the IC-230? I have
the working radio, now I need to know how to wire a microphone connector
to interface with the radio.

I need to know which pins are Mic Audio, PTT, etc.

Thanks and 73,

Adam kd6poc

>dying...ending...fading away...over and out. The pending purchase and
>conversion to commercial use of the VHF/UHF bands will simply be the final
>nail in the coffin.

Riiiiight.

So, lessee... Assume, for a moment, that we eliminate code as a requirement.
And, let's assume that amateur radio sees an overnight rebirth with
100% growth. Let's assume we then have 1.2 million hams.

Now, LEO (Lippo Espionage Organization) walks in with 200 Billion dollars
(that's a 2 followed by 11 zeros) and sez "we want 144-146 mhz".

Who's going to win? Hams? Or Leo?

Amateur radio is not dying because of code. Amateur radio is dying because
radio is passe', communications is no longer the high-tech attraction it
once used to be (the country's definition of what was "high tech" has
changed over the years, from radio, to television, to computers, and so on).
Communication is now a consumer, commodity item anyone can get by picking
up a cell phone for $9.95 at their local cell dealer.

>wimps, either. =0)

Maybe not, but most fido sysops wouldn't allow some of the bs that we see here, such as James O'Brien and his ilk.
Fidonet echoes are moderated, and when a moderator asks a sysop to curtail a user's access, it's usually done. Here some jerk such as kd4cdb can just pay some money to another isp and keep right on spewing trash.
Signal to noise is a lot better in Fidonet. I just can't afford to keep my bbs running, which is why I dropped out of Fidonet, and everywhere I can call to point is an ld call.
Once in awhile, I telnet to a bbs that carries the ham radio echoes and download a qwk packet, and see far more useful info there than here.

As for Blake Bowers, he was going to make me a decent deal on some 440 duplexers once, and seems to be an honorable enough fellow, and so does John for that matter.
There was always a little friction between the two of them, but that was nothing compared to some of the bs I see here.

Excuse me, but does Canada have cw subbands? Don't other
countries manage to survive with voice right where the U.S. must
use cw or other digital modes? In fact, on 40 meters last night,
I copied at least 3 VE3's using ssb at approximate 7055KHz, so
I have to wonder just what you were really trying to ask?

Rick,

Why do many no-code proponents use that argument, "....use the code as a filter to keep out the 'riff-raff' and also the Engineers, Techntions (sic), Doctors, Lawyers..." when defending their view on the aforementioned issue?

Are you "riff-raff?" Are you an Engineer? Are you a Techntion (sic) or a Doctor, or a Lawyer? I really don't see very many of these types wasting their time getting involved in a moot argument.

I've said it before and I believe it will happen...code will probably go by the wayside...eventually...and, I guess because I don't promote it I must be one of the "enemy." I mean, all Extra class hams are the enemy, right? Evolution cannot be stopped. No matter how absurd this argument becomes nothing, I said NOTHING will ever change as a result of what is said or done in r.r.a.*. Just a bunch of people expressing their views and if someone else's views differ they need asbestos screens for their monitors.

It looks to me as if not many appreciate the fact that it takes General, Advanced, and Extra class licensees to put on an exam session. If anyone obtained their license some other way (under the present method) I'd like to know about it.

CW is only a mode....but it is a good mode. :) Hey! Someone has to say something good about it...why not me?

You are short sighted as to the role rrap has already played.
Without rrap, yjere wouldn't be a NCI (No Code International)
group. Clearly, rrap has been a unifying force and lead to the
organizing of NCI.

>It looks to me as if not many appreciate the fact that it takes

Your point?

>CW is only a mode....but it is a good mode. :) Hey! Someone has to
>say something good about it...why not me?

No one in the no-code TEST camp wishes to end the USE
of code. Many people that are a part of NCI even like
the code. Use it all you want. The issue is NOT about
use of CW, it is about mandated testing of CW on a separate
pass/fail basis that is the issue and the ONLY issue.

So what? That's where the market is. Maybe if YE OLDE FAHRTZ and their willing accomplices in the ARRL would drop their opposition to the Morse hazing ritual, you'd see more people interested in 10 meters. If these radios were strictly 10m, they wouldn't even exist because there wouldn't be enough of a market for these inexpensive, mass-produced radios. Would you rather have to pay $1,000+ for a full-fledged HF rig in order to get on 10m in your car?

I hear what your saying Drew, however if the frequency is allocated to
licensed amateurs then there is NO intentional interferance if the other
station is non amateur. If you decided to operate your HT on 155 MHz in
the middle of the police/commercial band, should they not cause
INTENTIONAL interferance to you? Should they QSY until your finished?

Sounds pretty absurd when you put it in that perspective doesn't it. Im
sorry but I dont believe it's any different for non amateurs operating
in amateur bands.

I'd also like to know what equipment the '1kw mobile' users are running, I have not seen any commercial equipment rated for 1kw that runs off of 12 or 24V so that would be an interesting amplifier. Please tell us more. Also if you think an AM or SSB station is going to give me trouble on 10 while running 100 watts CW and a 250Hz filter your mistaken.

Tim, ka8ddz

No Drew, you work in *broadcasting*, not radio. You're a DJ who
plays teeny-bopper top-40s music, and when the music ends and you
begin talking everyone changes to another station (thank goodness
for push-button car radios!).

Well, common sense and logic would tell you this is probably not the case.
Why would a no-code tech or unlicensed person spend the
hundreds-to-thousands of dollars on equipment that would be required to be
heard on "THE ZOO" of 75m, only to jam and cause malicious interference?

Possible? Yes, of course. But highly unlikely. Think about it.

Bill, i belive that the IC has made things much easier
for the experimenter. We should be striving to upgrade our testing
standards to include knowledge of some of the basic building block
IC designs as well as Microprocessor fundimentals to tie it all
together.

Will, would you please document your statement?

>Interesting comment, especially in light of the fact Azden only made
>UHF/VHF equipment (with the exception of a 6 meter FM model). This being

Steve, VHF runs from 30 to 300 MHz. Your word choice, "exception", makes
it sound as if 6m isn't VHF.

>For those of you interested, there is a newsgroup for selling equipment,
>rec.radio.amateir.swap

There was no RFD nor CFV regarding that newsgroup, so it must be a bogus
group, with little propagation. Too bad it isn't a "real" group - with all
the LMR gear appearing on r.r.swap we need one devoted to ham equipment.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and
sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with
hobby terms and expressions. A clear speaking voice and the ability to
read the written text of Amateur Radio books and describe the diagrams
and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new
volunteers, as well as a copy of the book to be read and cassette
master tapes. Readers will need a good-quality cassette tape recorder
and a quiet place to record. Some of the books we would ask readers to
tape would be ARRL license manuals, special interest Amateur Radio
books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace,
as long as there is a quiet place to read. It is a wonderful way to
share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All

questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

* UNIX

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread

between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that

anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

>wanna be Uniden. I believe folks like you are creating this problem,
>or at least adding to it.

Really? Would you, in your infinite wisdom, please explain to me how it is that I am "creating this problem or at least adding to it" by the simple fact that I am a licensed amateur operator, using a legal amateur radio in my car?

>Want to be involved in Amateur radio but
>all you do is hang out on CB and brag to your friends hw smart you
>are because you got a ticket.

And just what do you base this on? Have you ever HEARD me on-the-air...either amateur or CB? Ever? Or are you simply parroting what others have said in this newsgroup?

>Dont take long to figure your type

Sorry, Jeffy. I didn't say it was ILLEGAL, I said it was poor amateur practice. If the primary purpose of your transmission is to cause interference to the other station, it is poor amateur practice to do so. Doesn't matter whether the other station is licensed or not.

Figures that you couldn't stick to the issue without firing a cheap shot. How about YOUR illegal HAM friends who "slide" DOWN to freeband 11m when the band is open? Seems there's a lot more hams on the freeband then there are CB'ers on 10.

Not likely. The FCC could care less about amateur radio these days. They would like nothing more than to auction off all the frequencies so that they wouldn't have to be bothered anymore with the petty problems of ham operators.

As usual, a predictable response. What a boring life you must lead to
have to continuously recycle your tirades.

Burt Fisher <burt@innocent.com> wrote:

>QSO? You MEAN contact.I was NOT as kiss ass as you were. I was trying to
>get you to act real but you were in the ham mode (never say anything controversal)

>> I can remain civil...as a matter of fact I prefer it. But, and you'll
>> probably agree, it's a lot different corresponding via the written
>> word than it is live.

>NOT IN MY CASE. I am not fake. Talk to me on the air again.

I think I'll pass on this one. No, you are not fake. You are
nothing. You have no life so you say the same things over and over
and over again. It's all you know how to do.

I'd just like to know what you are attempting to prove? Your
brilliance or your bullshit? How come I never hear you debating
issues on any of the local AM radio station talk shows? You have no
guts.

Burt, if I've noticed one thing...it's that you continuously project
your own shortcomings onto everyone else. You are a very bitter
person. One cannot argue with a bitter person, such as yourself,
because you'll always find something to gripe about and some way to
increase your own self importance. I'm am truly sorry you have such a
low self esteem.

>> So, since my son is in Yarmouth for the weekend I asked him to take
>> care of my light work. I hope you are okay. :)

>Would you like my address?

I wouldn't waste my time.

Don't bother responding. You are so predictable I know word for word
what your response would be. "Contact" ended. SK

Hey it's a great filter! Keeps 'em off the cw bands and make my qso's
that much more enjoyable. No one ever said CW is a great SSB filter.

Of course Spew does. He's an admitted "freebander", who openly
advocates the destruction of private property of those people he
disagrees with (coax pinning, antenna lassoing, etc.) A search through
DejaNews will turn up many gems from Spew, including how AIDS is God's
way of wiping out queers, Mexicans are a bunch of lazy bums, and so on.

Under the dome is a SatCom antenna used to communicate with Inmarsat or
another geostationary satellite. Frequencies range from 10GHz on up.
It is used for both voice and data.

Date: 1997-09-01 00:00:00 UTC
From: aswNS@hamp.hampshire.edu
Message-ID: <340ad88c.0@192.33.12.30>
Source record: 191180

On 22 Aug 1997 00:46:32 GMT Mark DeBord (markdebord@sprynet.com) wrote
in rec.radio.amateur.misc:

: I have had a HTX-202 for 4 years. I have a birdie on 146.760 and it makes
: our local repeater have a slight tone. Does anyone else with this radio
: have a birdie on this freq? It creates about a 2 S-Unit reading. When I
: remove the rubber duck, the birdie leaves!

The birdie is a harmonic of the oscillator that drives the scanning
circuitry for the keyboard. This is a well known problem with the
HTX-202. Normally it is only encountered when using the rubber duck
antenna, because an external antenna is usually far enough away to
avoid picking up the energy from the keyboard. Using one of the
antenna extension cords that allows you to stick your rubber duck to a
window with suction cups removes the antenna far enough from the HT to
reduce the pickup substantially.

The culprit is the oscillator controlled by X1001, a 3.579545 Mhz
crystal. The 41st harmonic is 146.76135 Mhz. In fact, on my HTX202
the interfernce is slightly stronger at 146.765 than at 146.760, so
there is probably some variation -- obviously this frequency was
chosen because the crystal is an inexpensive color-burst crystal,as
used in every US-standard color TV.

A possible solution might be to replace or pad with a parallel
capacitor C1016, nominally 20pf, so as to shift the keyboard scan
frequency slightly, far enough to have the harmonic fall between
channels normally scanned. I haven't looked at the circuit to see if
this is physically possible -- make any changes at your own risk!.

If you use your HT by setting it on a disk, table, or shelf, a simpler
solution is to make a shield out of a tin can or some other metallic
container, a box wrapped with aluminum foil might do. Set the HT in it
with the rubber duck sticking up over the top. I found that lowering
my HTX-202 into an asparagus cooker until just the antenna stuck out
reduced the interference to a point where it doesn't indicate on the
LCD signal strength indicator.

I have the 1990-94 and 1970-74, as well as the 1995 and 1996 CD-ROMs.
They are pretty handy, and definitely reduce the paper clutter.
Besides, we have just about every issue at the local club, so if I
want to get nostalgic, I can go over there and peruse the actual
issue.

I like being able to search for a certain topic over the five-year
span. Thus, if I wanted to follow the events leading up to Incentive
Licensing, I could retrieve all articles at once.

Hopefully, ARRL will publish the 1960-64 and 1965-69 editions soon.
I asked back in the spring and was told they would be available this
summer, but that's just about behind us. These are the years that I
first became interested in ham radio, and got my first license.

BTW, pages are in color for those years where color was used, and
can be printed as such with a color printer.

TO: Phil Gramm, Kay Bailey Hutchinson, and Bill Archer

Thank You for all you have done to reduce taxes, and cut rules and regulations in Texas. However, your job is not done. We need much more of the same. Please do all you can to cut taxes more and defund the departments that do harm to our freedoms. The EPA must be defunded. Carol Browner seems to igonore the importance of freedom. I do not support the new EPA restrictions signed into law by Bill Clinton.

The primary reason I am writting you today is because of pending legislation that will destroy a hobby that many Texans participate in, and many elderly make use of to help them maintain a sense of security in their neighborhoods.

Scanners are used to monitor everything from police and fire departments to airliners flying coast to coast. Many elderly people who are shut-ins listen to the police and fire departments in their towns so that they can keep up with the crime in their neighborhoods and even on their streets.
Scanners do no harm. They are nothing more than a radio that tunes in a broad range of frequencies. Many families find a scanner to be more entertaining than watching the many channels of destructive garbage on TV.
HR 1964 and 2369 are bills that will do great damage to the scanner hobbiest and the industry at large.
It is for this reason that I cannot support this proposed legislation.
I ask you to carefully consider the impact that this pending legislation will have on many of your Texas constituents.
Do we want an America that is governed by lobbiests, or by the people?
PLEASE DO NOT SUPPORT ANY NEW LEGISLATION, INCLUDING HR 1964 and HR 2369 THAT WILL BRING ABOUT FURTHER RESTRICTIONS ON THE USE OF SCANNERS.

As JJ said, no one has claimed that the code is a SSB filter. But if you'd tune down to the first 100 kc of 80m (or any HF band), you'd hear the code filter in action. Nothing at all like 75m phone. (Too bad all the bands aren't phone-free such as our beloved 30m.)

3414. hf packet vs hf propagation beacons

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-01 00:00:00 UTC
From: pmarkham@mortimer.com
Message-ID: <340B414E.1E59@mortimer.com>
Source record: 191189

To all concerned,

I monitor 14.100 mhz, listening to the international cw propagation beacons. I noticed, and then copied, substantial hf packet activity centered on that frequency. I did some basic arithmetic to determine why someone, using a KAM or AEA multimode tnc , would tell the world with the tnc beacon, the hf was listening and transmitting on 14.103 mHz.

For the KAM, considering the default audio shift of 200 hz, a default 1600 Hz tone for mark and an 1800 Hz tone for space, I did the arithmetic to determine what frequency a properly calibrated ssb transmitter frequency readout would show, while operated in LSB or USB mode using afsk to transmit on a center frquency of 14.100 mHz with sidebands at the +/- 100 Hz mark and space frequencies. With no dial readout offset, fixed or programmable, in usb it would read 14.098.3 mHz and in lsb it would read 14.102.7 mHz, to transmit tones on 14.099.900 mHz and 14.100.100 mHz.

For both usb and lsb the center of the transmitted 200 Hz shift sidebands is dead on 14.100 mHz. As far as I know, no amateur hf packet standard for identifying transmit or receive frequency would cause a shift center of 14.100 mHz to be transmitted, when 14.103 mHz was desired to identify some characteristic of the transmitted or received signal, if the default shift and tones of the KAM are used. Depending on the operator's knowledge and awareness, I suspect that similar calculations using the AEA default shift and tones may result in a contradiction between interpretation of the transmitter frequency indicator and the rf frequency of the mark and space "tones".

As a consequence of the KAM related calculations, I concluded that any or all of the following may apply. A number of packet operators may not know what frequency they transmit on, or are unconcerned about the qrm they generate on the propagation beacon frequency of 14.100 mHz, or transmit incorrect tnc beacon information.

I would appreciate those that operate hf packet would make sure that they know on which frequency they transmit. If not, I suspect the value of the propagation beacons to the international community, may be compromised, due to unintentional qrm that may be created, because of ignorance. Given the shared nature of the frequency spectrum, you are under no obligation, other than courtesy, to move a reasonable distance away. Some consider 500 Hz appropriate, as a 250 Hz cw filter will be adequate for all but very strong signals. Some consider 1kHz separation appropriate because of the "standard" 500 Hz cw filters in most rigs would filter all but the strongest signals.

Considering the improving propagation conditions to come, the beacons' value increases to all with world wide propagation interests.

3416. Antennas vs covenants

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-01 00:00:00 UTC
From: Glenn <rockymtn@sprynet.com>
Message-ID: <5ufpt6$g1s$1@juliana.sprynet.com>
Source record: 191191

Hello All.

I didn't realize this but a friend of mine took me to the FCC site and showed me that regular television antennas are covered in the "covenant busting" new FCC regs that allow 1 meter satellite dishes.

It is too bad we couldn't jump on that bandwagon when they were putting that in place. But this does open some unique opportunities. Aren't there any good antenna designs (for various bands) that can be made to look like television antennas? You could hook a small TV to it in your shack to make it "legal."

I see a lot of threads in the amateur groups discussing the "death of ham radio" but they seem concerned with other things. The real slow death of amateur radio are COVENANTS. Think about it: every time a ham moves it gets harder and harder to find an area that you can put up an antenna.

This statement was not from me, therefore I can not document it. I would
say, though, that with the sunspots where they are, the interest in HF
gear is depressed. And I'll even qualify that as to the base station
equipment. The sale of mobile style HF gear is booming.

One must be capable of sending and receiving CW at a minimum speed in
order to operate. The novice requirement of 5 WPM is about as slow as
one can get. Since those bands already exist, I doubt that a no speed
band would make any difference. I have heard (do not know for certain)
that the novice bands were created to do just what you are proposing.
If you listen to the novice bands, you will find higher class licensees
still working novice operators.

To be honest, if the US were to remain in compliance with International
Treaty, giving no-coders ANY privileges beow 30 MHz would be
impossible.

There was, however, a REALLY good, simple article in QST (what,
you don't GET QST???) in either July or August, 1997, on FM MCW
(Modulated Continuous Wave) via HT. Seems to me THIS is the solution
to getting no-coders a chance to practice Morse.

I plan on teaching a Morse class via repeater this fall.

Yea, Im with ya Scott, I guess I just feel as though there's so much unused band up there, and even when the bands open up, nobodys going to talk to them, certainly not DX so let them do their thing. I'll just work around them. And yes, a nice 100 watt RTTY or CW signal will at least keep them moving. :)

The key word here is INTENTIONAL interference. Purposely interfering with another's transmission is poor amateur practice, no matter how you look at it. Not to mention that it sets a bad example for would-be hams and may cause you more problems in the future than it's worth. Remember, there are far more freeband CB'ers in the world than active 10-meter amateurs. If you intentionally cause them interference, what do you suppose they're going to do to you with their 1KW mobiles and "noise toys" the next time they hear you trying to collect 10-10 numbers?

Jeff's "dream" would even have some value if it didn't stop at
the building of 1 and 2 transistor OOK Morse transmitters ...

Unfortunately, in Jeff's case, the part "the electronics skills hams
of *yesteryear* (emphasis added) taught themselves" is FAR too
operative ...

We DO need a return to self-teaching and pursuit of knowledge in
the hows and whys of radio technology, but to have any value to
its practitioners or to society (the "payback" for our spectrum
allocations) it must be at or near the current SOTA in radio
technology, not a reenactment of something that was done in
the 1930s, only with a couple of transistors instead of a couple
of tubes ...

We are at the point in the development of our civilization and
technology where things that were "great" just a very few years
ago are virtually useless today because of the tremendous
advancement and progress that has taken place ... the once
"mighty" 286 is totally worthless today, being incapable of even
running most modern software ... by comparison Morse code is
an original Intel 4004 ... or, better yet, the ENIAC ...

Mr. Herman and his pro-code cronies insist on the equivalent
of forcing everyone to prove proficiency in programming the
long-forgotten (except to historians) ENIAC (in its now useless
assembly language) before being permitted to use modern
Pentium computers and their optimizing C++ compilers.

I think it would be wonderful if more hams "had a dream" ... but let's
be honest with ourselves and make sure that the dream is reaching
out for some useful accomplishment, not just some useless romantic

nostalgia ...

He knows nothing about it. He's just one of ham radio's little parrots
who automatically hates these radios because CB'ers also use them. Why
wouldn't they? They're readilly available for not much more than the price
of a deluxe AM/SSB rig. Their performance and capabilities blows the
doors off of any CB radio on the market.

Burt has stated that he will be happy to "up close and in your face" if
the following conditions are meet

he gets 25 cents per mile plus expenses
if overnight involved, he stays in the hotel/motel of his choice

all $$$ payable in advance

Even after all that, he states "Ireserve the option of showing up"

Now that's a class act.

Hello All,
I've just bought one of the above radios at a rally and was
told enough about the keypad programming to determine that the set
works OK on it's original 450 - 470Mhz channels.

I now want to mod it to the UK 430 - 440Mhz amateur allocation and
wonder if anyone has done this before? Simple re-tuning doesn't look
like the answer as the local oscillator gives up before it gets down to
the 70cm band :-(

A web search has drawn a blank - even on the "Cleartone" company! - so I
wonder if anyone out there has wrestled with one of these sets before?

TIA,

Eric

3428. QST et. al. on CD-ROM (any good?)

Now that all of QST back to before I started getting it are
available on CD-ROM, I see a way to get rid of a bunch of paper.
I enjoy reading the old stuff, but don't really enjoy the
size of it.

So, the question is; for people who've bought the CD-ROMs, are
they worth giving up 'hard copy' for?

I wish there was a 'paperless' membership option. I'd as soon have
it that way, but I hate to pay twice.

The quick answer is presently definitely not! You still need to send in a form 610 or facsimile, signed directly by you to either the FCC at 1270 Fairfield Ave, Gettysburg, PA or to one of the VECs who do electronic renewals after they get the 610. No direct signature, no renewal.

Well Will, I've been able to build quite a few transmitters from old
TV sets; I've collected enough components from TVs and broken radios
to last me a lifetime. Inductors are easy to wind.

>Also, have you ever tried surface mounting
>components at home?

I use the old point-to-point and/or "dead-bug" wiring schemes. One can
use whatever method he find's easiest and convenient, or one can just
make excuses why building is "too difficult these days."

>Give it up people...ham radio is dead!

Get a better antenna. 80 and 40m are jammed as usual in the evening; activity
on the "new" 30m band has been increasing over the years. 160m is hopping.

It *must* be your antenna.

pillarREMOVE-THIS@filo.net (Will) writes:
>Also, have you ever tried surface mounting
>components at home? I played hell finding a small enough soldering
>iron at my local Radio Shack!

Yeah. I've done small amounts of work on surface-mount boards (removing and installing resistors and jumpers) on several pieces of hardware now. I use a Weller temperature-controlled iron with a 600 degree fine tip, desoldering braid, fine solder, and tweezers. And a magnifier. Solder cream would probably make life easier, but I don't have any. Working on surface mount *is* possible.

In fact, the last time I built a simple voltage regulator circuit board (a 7805, some capacitors and diodes), I made it surface mount *by choice*. It's a lot easier getting it small using surface mount parts, and I didn't have to drill all of the lead holes that would be necessary for through-hole parts. When it was done, I mounted it by gluing the epoxy side of the PC board to the metal case, since there were *no* components on the non-foil side of the board. With conventional construction, I would have had to mount the boards on screws with standoff spacers to keep the foil from shorting to the box.

I saved time and space by using surface mount.

(And my first experience with electronics was 30 years ago, building circuits on terminal strips. PC boards came later. You can teach an old dog new tricks...)

Interesting comment, especially in light of the fact Azden only made UHF/VHF equipment (with the exception of a 6 meter FM model). This being the case, how do the marketing genuis' of the newsgroup care to explain this? Of course, I will expect something significant and VERY entertaining from the marketing firm of Will, Fisher and Drew

For those of you interested, there is a newsgroup for selling equipment, rec.radio.amateir.swap

Ask Drew and Fisher, they seem to troll there alot.

Here is the Enlish translation of the Icom 746 Brochure that was handed
out at the Japan Radio Fair last Saturday!

HF to 2 meter radio,100 watts,50 watts with features
-all mode in all bands
-2 meter 50 watts
-includes PBT(pass band tuning),APF)audio peak filter),VOX,various
filters, all mode FSK
-key down transister finals
-tuner-includes gen coverage receiver
-visible display of signals on SPECTRUM SCOPE is much faster than on the
ICOM IC-756 radio
-100 Memory channels
-noise blanker
-auto DSP circuits for noise cancellings,notch,passband

Thats all folks. Special thanks for the Japanese/English speaking Ham
who tranlated the brochure for me.

Stones River ARC World-Wide Web Page:

http://www.voy.net/~rfi/stones.html

Our club offers CW training opportunities and we are working on
starting some theory classes but there are plenty of active Elmers in
our group despite our lack of organization to date. We also have VE
sessions and would be glad to help anyone in the area who is
interested in amateur radio.

Software Engineer | Exide Electronics - Small Systems Group
Raleigh, NC USA | "Powering Your Network with Intelligent Solutions"
- --

I am especially interested in VHF/UHF and microwave amateur bands as well as Amateur television. I am treasurer and a founding member of the newly-formed Triangle Amateur Television Association in Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Carcia's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a

particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's
certified by WCARS VEC. I have served for several years as a
proofreader for the NCVEC Question Pool Committee. I work closely with
the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic
handling from almost day one, having earned my first BPL at age 16 as
a novice. I have served as Assistant EC, County EC and currently serve
as District Emergency Coordinator for ARES/RACES and District Radio
Officer for Emergency Management Area F of North Carolina. I also
coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as
an officer of the local club, the Western Carolina Amateur Radio
Society. I designed our homepage, am quartermaster of club equipment,
and carry the keys to the club repeater. I frequently teach both
theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI
committee, hold WAS Awards both as a Novice CW operator and SSB Extra
Class, a DXCC with 86 of them worked as a Novice. I am also the
National Board Chairman of the Geratol Net, a WAS net which meets
nightly from October thru April. I also am chairman of the local
club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF
antennas and am frequently a new licensees first contact. (A debt I am
repaying to my three trusty Elmers of so many years ago, two of whom
are now silent keys)

I would be willing to help in these general areas on-line or close-by
on the phone or in person. (I am a college professor by trade)

Jack G.F. Hill W4KH

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a
subscription-only list, with $12 US per year as "dues" to support the
list.

With monthly costs for Net access at $350 US/month and telephone line
charges of $50 US plus, we are not getting rich. The fee was set after
much consultation and wrangling, and was designed to cover the costs
of running the list... and hopefully provide a surplus to upgrade the
services we can provide, like better mail delivery, larger archives,
etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an
Extra class amateur license. I got my first ticket when I was 14 years
old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General,
and teach CW at least once per year. I am also the VE team liaison for
the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and

Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

(where list is the name of the mail list you want to join and your_first_name and your_last_name are your first and last names, respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB

transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

I am an Amateur Extra Class operator first licensed in 1982. My present interests in Amateur Radio are concentrated in the following areas:

Lambda Amateur Radio Club (LARC)

Maintainer, LARC World-Wide Web Page:

http://www.netaxs.com/~skeptic/larc/

Co-Moderator, LARC Public E-mail Reflector:

larc@seta.fi

If you're not already on LARC's E-mail reflector, you're welcome to subscribe, even if you're not a member of LARC. All you ever wanted to know about our E-mail reflector, including instructions on how to subscribe and unsubscribe can be had by sending an E-mail to:

majordomo@seta.fi

with the following line appearing by itself in the body (not the Subject) of the message:

info larc@seta.fi

The Lambda Amateur Radio Club (LARC), is an international club for gay, lesbian, bisexual and transgendered radio, electronics, and computer enthusiasts (and their friends). Membership is open to all who are supportive of sexual minorities.

Members receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as Internet Relay Chat (IRC), and follow the planning and may even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation in 1998.

If you'd like to make many new friends, consider joining our club! We'll be happy to mail you an application right away. Just send an E-mail request for an application to:

larc@net-quest.com

OSCAR (Orbiting Satellites Carrying Amateur Radio)

I have been an active satellite operator on both high-orbiting (elliptical and low orbiting satellites (LEO) since 1990. I hold satellite DXCC #85 and I currently have 210 countries confirmed on satellite. I enjoy both CW and SSB and DXing. I am a member of AMSAT.

LARC has sponsored three DXpeditions to the Caribbean focusing on satellite operating.

Alan Larson WA6AZP

larson@net.com
larson@w6yx.stanford.edu

My areas are fairly general, and I teach classes (Novice and Tech, with and without code, and upgrade sessions) at W6YX. My main audience is to the Stanford (University) community.

I am also involved with some less common modes, such as fast scan television and weak signal VHF and UHF.

Zack Lau W1VT

Zack Lau W1VT Expertise: Design of SSB/CW amateur transceivers
c/o ARRL Lab : up to 222 MHz. Design of transverters
Newington CT 06111 USA : up to 10.5 GHz. Basic lossy filter
+1 (860) 594-0200 : design. Developing repeatable projects
zlau@arrl.org : using cheap, easy to get parts.

I'm now starting to look into 24 GHz SSB/CW gear using 10 GHz as a convenient IF.

Especially looking to help anyone wanting to be a QST/QEX author--I can't write it all myself!

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a

Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* How do I become an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* Acknowledgements

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only

not get reviewed for some time, my incoming mail filter (procmail) may even throw it away if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers ("Elmer" is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and

"Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

+ My World-Wide Web Page above has a reasonable set of resources for
+ digital networking, including HTML versions of some of my work, sample
+ configuration files for Linux AX.25, and some Linux software tools, as
+ well as the Ohio IP address coordination info.
+
+ I've just finished writing a book on TCP/IP that TAPR will publish
+ (hopefully) by the end of the year. It'll be called _Networking
+ Without Wires_ and is a completely rewritten, and greatly expanded,
+ version of the old _IntroNOS_ document I wrote several years ago. In
+ the meantime, I've made the old _IntroNOS_ available in HTML format on
+ my World-Wide Web Page above.
+
TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for

+ * UNIX
+
+ I am currently a mature student at King's College, University of
+ Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter
+ the third year of this course on 25th September 1997.
+
+ I run a telephone BBS in the Fidonet network. This is currently
+ offline due to problems with the telephone line, but is expected to be
+ back up in late September of 1997.
+
+ I also have my own IBM compatible computer, which has a P166
+ processor, 32M of RAM and a total of 4.6G of hard drive space, spread
+ between three EIDE hard drives. This computer normally runs under the
+ Linux operating system, and I am gradually moving the above Fidonet
+ BBS system across from MSDOS to Linux. Because of the lack of suitable
+ software under Linux, I am writing one myself, having had 15 years
+ experience as a professional programmer.
+
+ I am a regular participant in AuroraMUSH, a MultiUser system, and have
+ authored several patches to the suftware controlling it. It may be
+ visited at:
+
+ telnet://amush.ml.org:4190/
+
+ I have been involved with Packet radio for over a decade now. Indeed,
+ it was packet radio that got me interested in Amateur Radio in the
+ first place.
+
+ I started up a mailing list connected with the Amateur Satellite
+ world, currently using manual subscriptions. The list is:
+
+ Space.Repeater@cus.umist.ac.uk
+
+ and is for the discussion of the possibility of placing an amateur
+ band repeater or transponder in orbit around a planet other than
+ Earth, or on the surface of one of the other planets.
+
+ I will add that, although I can claim to be something of an expert on
+ both Linux and Packet Radio, I am definitely NOT an expert on the two
+ together.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Joe Moell K0OV

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips
* Frequently-Asked Questions (FAQ) and answers from the Homing In

mailbox
* Index and subject list of all Homing In columns in 73 Magazine
through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is
not affiliated with 73 Magazine, Wayne Green Enterprises, or any other
commercial entity.

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

Senior Scientist, Radio Branch, Communications Division
NATO C3 Agency, PO Box 174, 2501CD The Hague
The Netherlands CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on

hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

* Radio Officer and Chairman of Operations Committee for Lycoming County, Pennsylvania ARES/RACES/SKYWARN program
* Assistant EC for my local district, and Pennsylvania State Director for NACEC
* President of Keystone Amateur Radio Association (KARA)
* President of The Bald Eagle Repeater Association

3450. POSSIBLE RAPID ASCENSION PHASE OF NEW SOLAR CYCLE OBSERVED

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-01 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5udn0l$1o02@mars.online.uleth.ca>
Source record: 191225
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

POSSIBLE RAPID ASCENSION PHASE OF NEW SOLAR CYCLE 23 OBSERVED

There is strong evidence that we may now be within the rapid rising phase of new solar cycle 23. July and August had high mean sunspot numbers. In fact, August's mean sunspot number of around 36 (unofficial) is the highest observed since the decline of solar cycle 22 several years ago. The continued formation of new active regions (of the correct new cycle polarity) together with the increasing levels of sunspot numbers and associated solar flux levels suggests we are very likely now entering the rapid ascension phase of cycle 23.

This has significant implications. Some prediction methods may need to slightly adjust the predicted date of solar maximum, since some prediction methods use the ascension phase as the basis for predicting the time of solar maximum. Currently, the year 2000 is still expected to be the year of solar maximum (ie. maximum sunspot numbers).

This result also implies we will now begin to see rapidly increasing numbers of active sunspot regions on the Sun. As sunspot groups increase in number, their size and complexity will also increase which inherently means we will begin observing larger and more frequent solar flaring from these regions anytime over the next 6 to 12 months, lasting through to the year 2003 or so when activity begins to decline.

We will begin to observe more frequent terrestrial impacts from coronal mass ejections associated with solar activity and active sunspot groups. This has already begun and will increase in frequency and magnitude as time progresses and the rapid ascension phase of this new solar cycle takes a more firm hold. This is bad news for satellites, ionospheric radio communicators (who will benefit from increased ionizing radiation from sunspot groups, but will see increasingly powerful disturbances knocking out communications), electrical power generation companies, surveyors, and even perhaps racing pigeon owners! Anyone (or thing) dependent upon the Earth's magnetic field and the near-Earth space environment in which satellites reside could see impacts during this solar cycle.

We will also begin to see a rare form of solar flare materialize. The frequency of energetic Proton Flares will also increase as levels of solar and sunspot activity increase. Proton flares are particularly strong solar flare events that are capable of accelerating protons to high energies and therefore high velocities (sometimes almost relativistic - near the speed of light). These accelerated protons are then beamed out into space and can bombard the Earth with high-energy proton radiation that can be a hazard to

astronauts in space and (sometimes) pilots in supersonic high-altitude aircraft. These proton bombardments can severely ionize the Earth's polar ionosphere and can completely wipe out transpolar and high-latitude ionospheric radio transmissions. They can also pose a hazard to satellites in orbit. They can begin within minutes of a major solar proton flare event and can take radio communicators, astronauts and satellite operators completely by surprise. They can last a relatively long time - often as long as 72 hours before subsiding - sometimes longer.

Solar active sunspot Region 8076 produced one of the first M-class solar x-ray flares of this solar cycle. X-ray flares are categorized, from weakest to strongest: A, B, C, M and X. Each class is separated from each neighboring class by a power factor of 10. That is, an M-class event is 10-times more energetic than a C-class x-ray flare and 100 times more powerful than a B-class x-ray flare. Region 8076 produced this M-class flare on 29 August. Recent increases in x-ray flux levels from this region over the last 12 hours suggests another M-class flare is a distinct possibility over the next 24 to 48 hours.

We encourage everyone who may be affected by the increased activity that will be observed as we begin to more rapidly ascend toward the maximum of this new solar cycle, to monitor conditions closely for events which may have an impact on your activities.

Computer software has been developed to provide users with realtime solar and geophysical data. It allows the display of solar x-rays (for detecting solar x-ray flares), near-Earth space environment proton densities, electron densities, geomagnetic activity from 25 ground-based and two space-based magnetic observatories, and much more, including the ability to download the latest solar images and solar activity movies from professional ground-based and space-based solar observatories. It will also track the sizes, locations, and characteristics of active sunspot regions on the Sun as well as the types of solar activity that occur on the Sun each day. It is essential software for those who need to know what is happening on the Sun and near (or on) the Earth. Details and a fully-functional demo are available at: http://solar.uleth.ca/solar/www/swarm.html

Good Morning John,

It is refreshing to see that even a perennial Tech (you have been one
for six years now) can learn to be a mindless class bigot. Saunter over
to QRZ and you will find you and Drew have the same class of license
(BTW that is how you spell license in the US). At your current level
the HF bands are hardly "your" bands. However with the little smigens
that you do have access to you could work some CW with the FISTS boys
and bring up your speed so you could upgrade. Then you could be a real
bigot. I have 40m solid into Tennessee I'll work you if you like. My
call is quite easy for the non code adept to copy.

Does anybody do any homework before posting here?

Have you never heard the "Ham Radio & More" show Sundays at 6:00 p.m
hosted by Len Winkler? It's a talk show DEDICATED to ham radio.

Have you never heard of the "Art Bell" radio show on weeknights at
10:00 3:00 am whose guests have included W2NSD, Wayne Green?

What was that Will, about ham radio not coming up on talk radio?

Haw haw haw, yes Will we need you like we need Burt Fisher and James O'Brien.
It's O.K Will, they don't get it either. Everyday I meet someone else on 7040 who tells me about his new superhet he's built, or the new digital display he's working on using the PIC controller.

QRP Clubs have seen tremendous growth, the NorCal club designs kits for their members to build, I believe they sold over 750 of the 300mw 38 Specials. Have you read anything about this radio? I doubt it, It was a complete transceiver for $25.

Have you read anything about the NorCal 40a? They have sold thousands of them, it's a 2 watt CW tranceiver. Price was about $125. There is plenty going on within the hobby Will, but doomsdayers like yourself seldom know anything about it.

I'm sure ham radio will change in the future and may not resemble what it is today, I plan on enjoying it with or without you. I'll continue to build, experiment and make friends on the air who share similar interests. I feel pity for you Will, your not only not enjoying the hobby but you want everyone else to join you in your misery. Sorry my friend, there are too many of us left that are still having fun.

>Well done Jeff, but lets hope that it's more than a dream!

With all do respect to those that enjoy building their
own equipment, the bottom line is that the electronics
of the 1990s is not discrete component based at all.
A good contemporary receiver and transmitter used
a considerable amount of integrated circuits and
modularized circuit boards, etc. True, you can
probably build a CW transmitter if that's your preferred
mode, but today, that's a minority of operators.

Bein a competent tech/engineer today requires good
integration skills and the ability to understand, use
and build with integrated circuitry.

Interfere with other Amateur Stations Drew or any station? Does this
mean you should QRT when the shortwave BC stations appear on 40m? I can
work CW 500Hz away but I'm sure someone listening to their broacast is
hearing my 500Hz hetrodyne, is that poor amateur practice?

Haw haw, miserable little wanna be Uniden? Probably one of the most popular 10m amateur rigs on the market. Ok John, I'm game, can you tell me what you know about the front end of this reciever? Do you know anything about the IF scheme of the rig? How about the frequency synthisis? Yep, that's what I thought.

I use mine with a converter for 2m sideband, works great when the Russian birds pass over, do you know much about RS-11/12 John? You seem to know alot about the "miserable little wanna be Uniden" have you ever converted one for use on 24Mhz?

>Burt is a real man.

Yes he certainly is. He will invite you to his neck of the woods but he does not have the guts to travel to your neck of the woods. Like you said JJ he knows where the sure things are. He is smart and he knows that no one would waste their time travelling to meet him. That is why he is so brave and so quick to call others what he dislikes in himself. His postings are a true reflection of his self-worth.

You know how to tell a good teacher from a bad one? The bad one has to CONTROL the direction his students go in....shades of Burt. Good teachers GUIDE their students in learning...something Burty has yet to learn how to do. Since he is not fake--we know his actions are the same in the classroom as they are at the keyboard.

Nit the wit said that.

Well then don't use surface mount or look somewhere other than Radio
Shack for a soldering iron. Next...

> Then, I broke a couple of the tiny gold
> wires going to one of the embedded uPs.

Then you must not have much experience or don't know what your doing.
They stopped using gold wires back in the 70's was that your last
experience with uP's?

> Oh well, maybe I'll try one
> of the tube projects out of my 22nd edition of the Radio Handbook.

Good idea, I'm sure their must be kids in the neighborhood who have
never seen a tube, not to mention a glowing filament. I'm sure you could
have some fun doing that. You could show them how a 5U4GB was replaced
by a Diode, hmmm think I'll see what I have in the junk box, thanks for
the idea Will.

> Now, where did I put those 807s and fillament chokes. No prob, I'll
> just bop on over to Rat Shack and pick up a handful. Can probably

Are you somehow trying to make a point that because Radio Shack doesnt
carry 807 filament chokes that we should throw in the towel? Pretty weak
Will.

> Give it up people...ham radio is dead!
>
> Will
> Amateur Extra [ham since 1968, Extra since 1977]

No, you give it up Will, there is nothing anyone can say to rejuvinate
your interest, I know it and you know it. Your done, exausted, ka-put,

there are no new frontiers in radio for you so we'll all understand if your exausted and are ready to retire. I'd ask you to just leave quietly and let the rest of us have a good time but I know you wont. You want everyone else to quit because you have. Yes, misery loves company Will, perhaps you could start a newsgroup or reflector just for old exausted used hams like yoursef who can talk about how dead ham radio is while you prepare to move into your next life. Clearly you have nothing left to offer.

Of course with cellular phone technology changing nearly everyday you could come up with some new, more efficient data transmission modes. (You being an extra and all, Im sure your a whiz at digital transmission etc) You could experiment using the 908 to 928Mhz band. Perhaps you could make a little retirement money along the way. I'd reccomend this to you Will, but you seem to have trouble locating parts for a simple DC receiver, and your certainly not going to ever find your filament chokes at Radio Shack. Im sure building equipment for 908Mhz would be out of your league. Please exit quietly through the door marked "DEAD".

Sunday nights and weekday overnights is known in the industry as "graveyard time." In other words, it's the time of the week when audience levels are at their lowest, the full-time staffers are not working, and the station is just looking for something...anything...to fill the time. Furthermore, Arbitron ratings only cover 6A-12A. Overnights are not rated at all. Sorry, but ham radio is not that important to the average radio audience.

Depending on the ship, the radome houses an X-band antenna (7.25-8.9 Ghz) used on DSCS satellites. It could also house an antenna used with the Milstar satellites (20-30 Ghz) or other satellites with Milstar packages such as UFO. OR....a number of ships are participating in a new program called GBS (Global Broadcast System) which uses Ku band and/or Ka band satellites.

Actually, I should have mentioned that "very nearby" was about 3 kHz
away from where they were, and on my receiver, I couldn't hear them.
Anyone with decent receiver should have been well-clear of my
transmissions.

I guess their receivers weren't too great. Anyway, as for where
they should go, I don't really care, as they're illegal operators
anyway. Maybe they'll end up ticking off someone who's got some
TEETH, and can actually go and bust 'em.

Dead or dying, amateur radio has changed, and is now two services -
a personal communication service, and a museum of old-fashioned
technology. Neither contains any technical content.

Dying? Probably not. In need of a significant rethink? Yes.

The Shore Area Hamfest is coming! Sunday October 12, 1997 Rain or Shine.
It will be held at the Brookdale Community College in Lincroft, New Jersey.
Take the Garden State Parkway to exit 109 than go west on route 520 to the
college. There will be a large indoor area and an even larger outdoor area.
There will be plenty of FREE parking.
ARRL VE testing starts at 10:00 AM. Buyer can start coming in at 8 AM.
Tickets on sale at the door for $6 or you can get tickets in advance for
$5.

For more info contact Al Jackson NK2O (908) 922-8121
Or write Shore Area Hamfest
PO Box 635
Eatontown, NJ 07724

Talk in will be on 145.485 /-6

It's poor amateur practice, and illegal, to interfere with a
legally operating station. It's pro-active band protection to knock
bootleggers and pirates off of the frequencies they encroach on. Or do
you condone illegal operation?

I hear a lot of unidentified transmissions intended to stir up trouble. How do I know they're not no-code license holders? For that matter, how do I know they even have a license at all?

Your "filter" comment makes about as much sense as a soup sandwich.

>
>Yes, what you can do is not worry about it, have you listened to 10m
>lately? I cant imagine that an AM only 10 watt (or however much power it
>has) is going to cause me much trouble, what about 28.500 and up? plenty
>of room there.

They're there and when the band is open, 1 watt can be heard around
the world - just wait a few years.

As for illegal ops, I heard these guys chatting away locally on 28.305,
roger beeps and all. Realizing that they weren't hams (waiting for IDs
and after 10 minutes hearing none) I felt free to grab a very nearby
frrquency and call CQ on CW.

They quickly vacated, and nobody, unfortunately, answered my CQ.

As the FCC has said, "it's not interference if you interfere with a
station that has no right to be there."

Haven't seen it yet in my mail box or on the news stands(SoCal). The
last time this happened it came a month late. I prompyly sent ARRL
subscription an e-mail about the first of the month and about 2 weeks
later recieved my copy and a week after that recieved the
late(Original mailing address) one.

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to

ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and

C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many years in broadcast engineering.

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage,
coordinate, or regulate the usage of digital systems, but to provide
the most up to date and accurate listing of digital systems that can
be provided. Neither is it a formal organization, but a mechanism to
allow regional groups to provide and share information regarding
digital systems.

The Digital Systems Directory listing is intended for use by
individuals to further their enjoyment of the hobby and by

organizations to help plan and develop digital networks.

Please direct any submissions, feedback, or administrivia to my E-mail address above.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

>use of CW, it is about mandated testing of CW on a separate
>pass/fail basis that is the issue and the ONLY issue.
>
Why not just make the CW part of the test just a part of the test. IE,
questions on content of a test transmission are just grouped together
with the theory and rules part of the test, and you only need get 70%
(or whatever the passing score is) of the whole enchalada correct.
Blow the CW questions, you just have to get that many more theory
questions right.

I'm not sure what the point of having differing grades of licenses is
anyway. If you compare it to getting on the internet, you don't need
a "license" of a certian grade to do world wide web vs read newsgroups
(different "bands" of communications), you are just limited by your
hardware, software, ISP and smarts. Beyond needing to know about RF
and electrical safety, basic electronics theory, RFI resolution,
conduct of transmitting (rules of road), and what not to do (pirate
radio stations, curse on air, not even on 14.313 and 147.435 MHz!),
why require a test for a license? Both internet and ham radio require
a unique identifier (callsign, e-mail address) for knowing who to blame.

>spewing trash.

So why read the "trash" if you don't like it? Most newsreaders have killfiles/filters. If not, it's just as easy to ignore an offending author.

>As for Blake Bowers, he was going to make me a decent deal on some 440

I am a new no code tech; Took the test recently and have seen my call on the internet [KF4TVB] - what I wish to know is - can I transmit with that call now or must I wait for a hard copy license? My no-code tech book I've been studying is ambiguous on this; it does say there is a new system in place and new rules that allow operation once your call is assigned and listed in the FCC database; however I always thought one had to have that license or a copy in hand. Can anyone email me on this? DKrause@Citcom.net

Yes Drew, we all Get it, Let Drew and his CB Buddies have all of HF by just showing up, then we will all look back and say thank God Drew has saved Ham Radio, now instead of having a Couple of Freqs on HF sounding like CB they all will.
Drew I see you have been a Loyal CBer since 9/76, with that tremidous amount of Experience at Chaos Im sure you our well suited to tell us how Ham Radio should be, so Drew Please tell us how it would be in the Future if we followed your Guidelines, oh no answer, well at least you can tell us how to spell and maybe even give us some advice on Punctuation, or of Course you could tell us to get an Education, maybe even get as much Education as you, and we could all be Un-employed Disc Jockeys Collecting Big Money from the State, oh do you also get Welfare now? Most Cbers get Welfare.

^^

I agree 100% with your opinion on that point. It is mine also.

I seriously doubt there is anyone here in r.r.a.m. who can immediately
do anything about it. There is certainly nothing I can do about it.

I will and do refuse, however, to accept any responsibility or blame
for code being a requirement to get onto HF. For now, I do not
promote its abolition nor do I promote its remaining a "filter"
either. I'm not sitting on the fence. I just know that it's only a
matter of time.

My honest feeling is that either way cw will have nothing to do with
the demise of amateur radio whatsoever. The demise of amateur radio,
as we know it, will actually come from the care-less attitudes and the
taking granted of privileges by those who claim them as rights.

There will always be something though. Once the code "barrier" is
gone there WILL be something to take its place.

>Gee another wonderful rabbit out of the very small hat of Drew. A
>codeless HF license and a company that does not make HF gear, what a
>novel concept.

You don't get it, do you? The mere association of an outdated concept such as Morse code with amateur radio is enough to scare away several would-be hams. I've seen this firsthand on several occasions. Upon telling someone that "you should get a ham license", the first words of response are almost always "But you need to know Morse code for that, right?" An answer of "well, not for an entry-level license, BUT..." is always discouraging, no matter how you word it. You can literally see them roll their eyes. They cannot believe that, in this age of computers and the Internet, an ancient ritual like Morse code knowlegde would still be required for the purposes of obtaining an amateur radio license.

>Oh that's right, I gorget, the Drewster advocates illegal
>freebanding, so this would fit it his list of illegal activities and
>advise.

Whatever. More nonsense that, as usual, does not relate to the subject being discussed.

Jim,

I can only hope that my departure from the ranks WILL be a needed "shot in the arm" [sic] for amateur radio. Oh, if only it were that easy! I'm pretty sure that my lack of renewing will not be enough to save a hobby that has such dim prospects for the future.

Good luck to you my fellow ham, and here's to smooth sailing for you and yours. I still recommend that you sell the equipment and find a new [non-techno] hobby.

Jim,

If only it were that easy. I'd gladly take a beating if that would
serve to solve some of the problems that we are faced with today.

Technological unemployment, a growing underclass, overpopulation,
racial strife. These sort of make a simple fist
fight...well...SIMPLE!

Where would one of these homebrewers find the parts for the
construction project. Also, have you ever tried surface mounting
components at home? I played hell finding a small enough soldering
iron at my local Radio Shack! Then, I broke a couple of the tiny gold
wires going to one of the embedded uPs. Oh well, maybe I'll try one
of the tube projects out of my 22nd edition of the Radio Handbook.
Now, where did I put those 807s and fillament chokes. No prob, I'll
just bop on over to Rat Shack and pick up a handful. Can probably
find some really good bathtub caps while I'm there.

Give it up people...ham radio is dead!

Burt,

Although you come across as sounding like a real horse's arse most of
the time on this group, I will have to agree with you on this one
point. If ham radio is not dead at this time, it surely has not long
to go.

Again, my adivise to all of the readers is to sell all of the
equipment and find a new
hobby.

Scott,

I must agree with Burt on this one. Ham radio IS dying [if not
already dead]. Younger people simply are not interested in radio
communication. Communication is now nothing more than a commodity.
Nothing more and nothing less.

Sell the equipment and find a new hobby. That's what I've done.

3506. how about a CW subband for no-code hams in HF?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-02 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEFuvuz.475@netcom.com>
Source record: 191008

How about we provide the no-code hams a small segment of a CW subband for them to "wet their appetite" for code? Pick frequencies for them where commonly avaliable TTL osc modules (from the computer industry) are easily had, to make QRP rigs. Use shortwave radios with BFO as the receivers. I got a 28.224MHz osc module off a dead sound card. Is 14.318 in a CW band (probably not, as this is kinda close to the infamous 14.313 SSB frequency).

If you heard someone fumbling with a CW CQ, would you encourage him on, or run him outta town? (assuming he is legal). I've heard of extra license holders hanging out in novice bands helping them get better at code, way back in the code-only non-renewable novide days.

Do you have a hard time "selling" ham radio to high school kids because of the code requirement for HF?

I too partook in the 15 meter opening, and even worked most of the Asian
Rim countries, including Vietnam, Singapore and China, but that does not
even come close to claiming propagation is coming back. An SFI of 92 in
a time where it is commonly hovering in the 70's does not necessarily
mean we are on the upswing. Sunspot prognosticators are still predicting
the bottom as several months (6-8 to be exact) away. There will be
openings, but nothing like the good ol days of SFI indices of 200+

Still, one can only hope

Does anyone out there have the service manual on the TS-850 and can you tell me the adjustment for the power output. This radio is down to about 75 watts. I'm sure it can be turned up but without the service manual, I don't want to start turning pots.

Thanks

Dennis

(*****

The following is a QST

The Department of Defense says CW is again OK for MARS practice but tells members not to use it for real emergency communications. This story and more on Newsline report number 1045 coming your way right now.

(*****

CW RETURNS TO MARS ALMOST

Morse code can once again be used on MARS frequencies, but for practice communications only. Use of the cipher is still officially banned for official message handling and may not be used during real emergencies.

The Military Affiliate Radio Service or MARS would cease the use of morse code on October 1st, 1996 is now once again, permitting the use of cw. Navy and Marine Corps MARS members have been informed by the Department of Defense that it has no objections for the use of cw on MARS frequencies,

but only for unofficial use and practice. No emergency or official messages are authorized to be sent using cw. Cw use as well as cw nets are already in evidence on MARS frequencies.

The reason that the military is once again permitting CW in MARS operations? Membership in the MARS took a drastic nosedive after the use of Morse code was banned last year by the Department of Defense. While the DOD won't resurrect its Morse monitoring due to budgetary constraints, it sees nothing wrong with hams using it. This, so long as these same hams are willing to use DOD approved modes when dealing with the agency.

KICK A JAMMER OFF THE AIR

If you want to get jammers off our bands and off our repeaters, then now is he time to write the FCC in support of RM 9150. The FCC is seeking comments on this ARRL Petition for Rulemaking that asks the Commission to improve the way it addresses serious Amateur Radio rules violations.

Filed in late March, RM 9150 calls on the FCC to create a streamlined, privatized enforcement process" to handle and adjudicate the most serious Amateur Service rules violations. The League asked that the FCC change its rules to permit members of the volunteer Amateur Auxiliary to bring evidence of malicious interference violations directly before the Chief Administrative Law Judge. The judge would be authorized to determine if the complainants have a valid case, to issue showcause orders, and to designate complaints for hearing.

Comments to the FCC should reference RM 9150 and be mailed within the next seven days. Address your letters to the:

Secretary
Federal Communications Commission
1919 M St NorthWest
Washington, DC
20554

FCC CHANGES FINES STRUCTURE

Meantime, it's going to cost radio and tv broadcasters a few dollars less to violate the FCC's ban on indecent and obscene broadcasts. Under new guidelines the base fine for each indecent or obscene broadcast is $7,000. That's down from the previous $12,500.

According to the trade publication Variety, some fifty new penalty rates have been published by the FCC. While many fines were lowered, others that involved threats to the public's safety were raised.

For instance, the fine for improper maintenance of a radio or TV tower was raised by $2,000 to $10,000 per day. And as previously reported, that fine is assessable against all people renting or using donated space on a tower, including ham radio repeaters and remote base installations.

(From Variety based on FCC Release via Newsline)

(*****

MILWAUKEE TOWER LAW UPDATE

Two weeks ago Newsline was first to bring you word of a new and exceedingly restrictive tower and antenna ordinance that has been imposed by the city of Milwaukee Wisconsin. On July 25, the Milwaukee Common Council approved the new ordinance on transmitting towers that effectively limits the height of new installations to 40 feet. This includes the mast and antenna and is effective in most residential areas.

Applying for permission to go beyond the forty foot height limit will require the prepayment of a $300 fee. This will be used to hold public meetings to which all neighbors of a proposed new tower will be invited. Existing towers are grand fathered as legally noncomplying, but when the new ordinance that goes into effect on November 1st there will no longer be an exemption for amateur radio towers and antennas.

The Milwaukee Radio Amateur Club is leading the fight to get the ordinance changed to favor hams. The club is considering asking the City Attorney to review the new law in the light of federal preemption of ham radio antennas as outlined in PRB 1. If the city refuses, the club may organize Milwaukee's 800 plus hams to meet en masse with their city council representatives. If that also goes no place, the last resort would be taking the matter into the Federal District Court. There, the cities ham radio community will seek to have the new ordinance nullified, at least as far as amateur radio towers and antennas are concerned.

And hams may be getting support from other services who use transmitting towers. Word in the two way radio and cellular telephone industries is that legal action is being considered if Milwaukee implements the new restrictions.

(Via K9ZZ, others)

(*****

POLK COUNTY ANTENNA WIN

There is better tower and antenna news out of Florida. There, thanks to the efforts of many hams the Polk County Board of County Commissioners has instructed the Planning Division to exempt amateur radio towers from the proposed tower restriction ordinance.

According to N4DL, the Planning Division had recommended a maximum height of 65 feet for ham towers. Over 65 feet would have required a special exemption, the cost of which, may have been excessive for many people. But the areas ham radio community was able to convince city planners of the

importance of ham radio to the community. As a result the exemption for ham radio was granted.

(Via N4DL)

(*****

UPS STRIKE AFFECTS HAM RADIO EQUIPMENT DELIVERY

Amateur radio operators are among the many people glad to see the UPS strike settled. The effects of the strike could be seen in the form of strong equipment sales at the Huntsville, Alabama, Hamfest August 16th. Newslines David Black, KB4KCH, talked with dealers scurrying to find other ways to ship ham gear to customers. Keep in mind that David filed this story while the strike was still underway:

Good prices aren't the only reason for brisk sales this years Huntsville Hamfest. Buyers know that even if they have to pay tax, they'll be able to walk away with their purchase. And with UPS shut down, that's strong incentive to do business on the spot. Many equipment dealers say the strike has been one huge headache.

"This has hurt us worse than anything since we've been in business." Underwood

Tracy Underwood manages RT Systems in Huntsville. Sending orders to his customers is a daily challenge.

"I basically have to go out every day and drive around town looking for FedEx drivers. And then they limit the number of packages I can ship with them." Underwood

At the Ham Radio Outlet booth, manager Mark Holmes, KJ4VO, is busy taking orders:

"We ship a lot, there's no doubt. I don't think, we are not dying. People drive to the show. There's a hamfest they're paying' tax." Holmes

Even manufacturers like Yaesu feel the squeeze. Kevin Karamanos, WD6DIH, is Yaesu's sales and marketing director:

"It's causing us to ship product in other ways to either customers with repaired radios or to the dealers. We're just finding new ways of shipping it. It could be truck service, FedEx or another source." Karamanos

Rick Pourcieau, NV5A, of Baton Rouge, is known as The Sign Man. He and his wife Donna run the business and so far have escaped most of the inconvenience.

"Most of our customers know that we use the United States Post Office, and we use priority mail. We have actually, over the years, we found that we have better service USPS than we do UPS." Pourcieau

The strike has put a strain on something else for equipment dealers. And that's time. Russell Craig is marketing manager for Mr. Nicad:

"It uses up man hours having to run people back and forth to the Post Office to submit four parcels at a time." Craig

At RT Systems, Tracy Underwood says some products were shipped to customers by UPS just as the strike began. Now, the shipments are hung up in transit and customers are calling Underwood, wanting answers he doesn't have.

"One problem I've noticed is that Airborne Express and some other companies are refusing to take things that they even, that normally would have gone on UPS. I am using the Postal Service to a certain extent, I am using FedEx, I have actually used Greyhound bus lines on large items." Underwood

There may be more reason for amateur radio equipment buyers and sellers to be nervous. UPS pilots are talking about staging a walkout of their own one that would shut UPS down again.

The bottom line? If you have a radio on order and it was shipped to you UPS, you have no alternative but to sit and wait for it to show up in that big brown truck.

(Via Newsline)

(*****

HUNTSVILLE HAMFEST GROWS

And speaking about the Huntsville Hamfest, for the second year in a row it has bucked the downward trend. In fact, Huntsville appears to be the first major ham radio outing to show substantial growth in 1997. While attendance figures are not yet available, convention administrators are saying unofficially that show attendance may be up as much as 15 percent over 1996. Compare this to the 10 to 20 percent drop in attendance that most other shows have reported, and it says that the folks in Huntsville have found out hat the public wants. Yaesu's Kevin Karamanos, WD6DIH agrees:

"The Huntsville Hamfest is great! It is the only chance to see this many people in the south once a year. And the people are so friendly and nice here." Karamanos

Something else different at Huntsville was a lack of elderly hams and a significant increase in the number of youngsters. Yaesu's Karamanos also took note of this shift in demographics. He says it might be because the folks in Huntsville decided to advertise:

"I noticed and influx of young people. I don't know if anything was different. I know this year we did something new, we put billboards all around the city. We put 15 billboards in along with the hamfest committee all around touting the hamshow for about 3 or 4 weeks. Trying to we new people that maybe would not come to a hamshow to drop by and just say hello." Karamanos

Newsline reporters attending the show counted close to 250 youngsters walking the display floor on Saturday. More than half of them were hams. Amazingly, at least one third of these were teenage girls. Obviously a

major shift in ham radio demographics is beginning to take place in ham radio in the SouthEastern United States.

(Via Newsline)

(*****

KB6HP LEAVES WORLDRADIO

Still with ham radio industry news, word that longtime Worldradio Magazine Editor Lou Ann Keogh, KB6HP, has left the magazine. According to an email message sent to regular contributing writers by Keogh, she and the magazine terminated their association the week of August 11th. No explanation was given as to why.

Mrs. Keogh did take the time to thank all of the writers she has worked with during her tenure at Worldradio saying: "It has been a delight working with you, and I value each of the friendships which we have made with one another."

It is not known if KB6HP was terminated by Worldradio or if she left of her own accord. At air time no replacement editor has been named.

BIKER RESCUE

Mountain biker Tom Thompson is grateful for ham radio. This, after radio amateurs played a vital role in getting him prompt medical attention on August 3rd after he was injured during a ride in Pennsylvania's Lehigh Gorge.

Amy Zimmerman, KD3TI says that ham and paramedic Joe Cummings, N3SQR, of Warrington, Pennsylvania, was biking with his daughter in the area when they came upon Thompson. Thompson had been seriously injured suffering broken bones. Joe used his HT and the Carbon Amateur Radio Club repeater to reach Ann Keiser, KO3M. Keiser called the local 911 emergency number and got help on the way.

Thompson was especially fortunate that a ham found him. This is because the area where he was injured is outside the normal range for cellular telephone communications.

(Via ARRL)

(*****

INDIANA 7K RUN

Ham radio public service communicators have braved the heat and humidity to provide communications for a major Indiana public event.

What could be more fun than a day of fast feet, fried fish and ham radio. The Mid State Amateur Radio Club in Franklin, Indiana provided communications for the Flat Rock Fall Festival 7K Run.

That's right, a Fall Festival in August. It was the fourth annual event to benefit the Flat Rock, Indiana Volunteer Fire Department.

Cooler than normal temperatures and blue skies provided a picture perfect day to run a marathon through southern Shelby County, into Bartholomew County and back to Flat Rock.

Rick Reneau, KB9NDF coordinated the early morning event while Vernon Gill, N9QBO manned the ham radio net.

The two hundred plus runners and walkers took just over an hour to make the 7K circuit.

According to Parker, over a dozen hams turned out to assist with race communications.

(*****

MILITARY HONORS REACT VOLUNTEER

The United States Army has awarded Alfred Fronefield, KC5VCF, with the "Military Outstanding Volunteer Service Medal". This is a once per lifetime medal, based upon Fronefield's actions as a volunteer over the period of October 1995 thru April 1997.

According to REACT's Lee Bessing, N5NTG, Fronefield is currently stationed in San Antonio, Texas. There he serves with the Joint Personal Property Shipping Offices, but will be transferred to Germany later this year. He is active with Bexar County REACT Team #4950, serving as its president. He is also a Life Member with REACT International, is an active member of the Alamo Area Radio Organization, San Antonio Repeater Organization, the San Antonio Radio Club and a volunteer with the American Red Cross Disaster Services.

The citation was awarded to KC5VCF by his commanding officer, Sgt. Steven Quarles, after approval by officials at the Pentagon.

(Via N5NTG)

SAREX TEAM WINS NASA AWARD

The Shuttle Amateur Radio Experiment has won a NASA Group Achievement Award. This, based on SAREX activities during the recent STS-94 mission on the shuttle Columbia.

Principal Investigator Matt Bordelon, KC5BTL, accepted the award on behalf of the SAREX Working Group and others who supported the SAREX payload during the mission. These include AMSAT school mentors, ham volunteers who staffed the Johnson Space Center Customer Support Room during the mission, the ARRL Educational Activities Department and other headquarters staff members, and ham volunteers from Johnson Space Center and the Johnson Space Center Amateur Radio Club.

Johnson Space Center Director George Abbey presented the award during the STS-94 mission debriefing session at Johnson Space Center on August 12. The SAREX Working Group is chaired by Roy Neal, K6DUE.

(Via SAREX Press Release)

(*****

MIR COMPUTER FAILURE

More problems for the ham radio crew aboard Russia's Mir space station. Russian space officials say a computer failure aboard their Mir space station sent it spinning in orbit on August 18th. This forced engineers to shut off all but vital life support systems.

Mir's computer failed a few minutes before it docked with the Progress supply ship. This compelled Mir's commander to dock manually with the Progress after the crew regained control of the station.

Flight director Vladimir Solovyov said Mir also lost its orientation toward the sun which the station's solar panels must see in order to charge the facilities batteries. The crew had to fire station keeping thrusters to point the station partially back toward the sun. This allowed Mir to charge up its batteries before the crew attempted to again reset the space stations sun orientation.

The computers were brought back ion line on Tuesday, August 19th. This problem had forced to newly arrived crew to suspend repairs on the aging space facility. Those repairs have been rescheduled but the long-term future of Mir is unknown.

HAM RADIO HERO

Add finally, an amateur radio operator in San Diego is alive today thanks to the concern of another ham. When longtime Newsline contributor Mike Sullivan, WA6HJJ, noticed that something didn't sound right in the voice of a fellow ham, he took note. But then Mike looked into the situation a little further when his friend failed to show up on a High Frequency net, failed to answer his phone and wouldn't return email. It seemed as if the person who lived alone had vanished from view.

Fearing for the worst, Mike asked the local authorities to visit his friend's house. When the police arrived and found old newspapers stacked up, they made entry and found the ham collapsed on the floor. He had been unable to eat, drink or move for two days, having collapsed because of a previously undetected medical condition. Now he is recovering in a community hospital and praises Mike for saving his life.

Radio hobbies are many things to many people, but this incident underscores the vital sense of community that ham radio engenders. Thanks to Mike Sullivan, WA6HJJ for having a keen ear, and for taking the time out of his schedule to look into a mystery. That action, ultimately, saved a life.

Hi Glenn,
In this month's issue of CQ magazine (page 5) there is an ad for exactly
such an antenna: "The Model DBLP-62 looks like a standard TV beam, yet
delivers unparalleled performance. ... two log-periodic dipole arrays
which are fed in series ... one feedline (for both 6 and 2m) ..."
Gain: 5.5 dbd (6m), 6.0 dbd (2m)
F/B gain: 25 db (6m), 30 db (2m)
Boomlength: 10 ft, longest element: 9.6 ft, weight: 10 lb.
Manufactured by Hy-Gain.

*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-personal.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from:
ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from:
sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

A version of the software is available from ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

>one can get.

What is so magical about 5wpm, as opposed to 4 or 3 or even 1 wpm.
What would be bad or wrong with someone starting out using
a cheat sheet to look up for coding and decoding?
What difference does it make? What's the fear, harm or danger?
There's no minimum speed required to use CW on VHF, what's
so special about HF in comparison?

>Since those bands already exist, I doubt that a no speed
>band would make any difference. I have heard (do not know for certain)
>that the novice bands were created to do just what you are proposing.
>If you listen to the novice bands, you will find higher class licensees
>still working novice operators.

And you will find those novice segments pretty empty too.

: This statement was not from me, therefore I can not document it. I would
: say, though, that with the sunspots where they are, the interest in HF
: gear is depressed. And I'll even qualify that as to the base station
: equipment. The sale of mobile style HF gear is booming.

Given the price for a top-of-the-line rig these days, I am not at all
surprised. Even most of the "low cost" stuff has so many unneeded bells
and whistles that it is a pain to use the rigs. That may be why there
is such a resurgence of interest in the old boat-anchors.

I don't think the codeless license has anything to do with it. The Japanese tend to buy top-of-the-line rigs - as soon as they come out. The market in Europe is also strong. It is only in the US that sales are declining.

I would suggest that YOU also need a dictionary!

Why not let all this nonsense drop and stick with amateur radio? I must admit it's better than reading SPAM, but all these personal attacks, etc. makes it little better than 40 meters was when I was first licensed in the mid 1950s and certain frequencies were nothing but non-stop heterodynes by those trying to show that theirs was "bigger" than the other guy's!

Gee, maybe we should have a new prefix for personal attacks? PA: subject? Then the rest of us wouldn't accidentally stumble onto this stuff.

We're working on it. Shouldn't be too much longer.

> BTW, pages are in color for those years where color was used, and
> can be printed as such with a color printer.

Um, not quite. The annual periodicals CD-ROM, the first of which is the
1995 edition, has color. The QST View product, which covers 1994 and
before, consists of scanned B/W images.

Jeff et all,

Just check with any one of the amateur radio "superstores." If they tell the truth when asked, they will let you know that HF rig sales have been pretty dismall over the past couple of years. 1997 was the lowest sales year in history. Now, if you just call them on the phone you probably won't get the full story, but if you "know" someone who works in one of these stores [I do!] you will get the full story about what is going on.

3540. HELP! What is all this?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-02 00:00:00 UTC
From: Keith Fisher <fisherk@u.arizona.edu>
Message-ID: <340C37EF.B69CB2A6@u.arizona.edu>
Source record: 191042

First off I do not know anything about Ham Radio. I recently inherited some radio equip. I am wondering what it is. I have been reading up a little about HAM and I am more confused than when I started. Here is a list of what I have. Could anyone tell me what it is and what I can do with it? Thanx!

1 - trio SSB Tranciver 120S.
1- Trio Power suply
1- Trio Antena Tuner
1- Trio Pre-amp
Misilanour Freq counter,power sups, multimeter ect

I pluged all this in and hooked up a small ant. that came with it. (its about 2 feet long) And played with the knobs. To my suprise I heard many

voices! I was on the 3.5 or 7 band. The radio also has 15,18,21,28,28.5 bands but they were silent. (do I need a biger ant?) I realize that I may not transmit because I do not have a license. I am content for now to listen. But it was very exciting to heare voices and I am thinking about learning more about how all of this works. Thank you for you time!

Keith

3541. What freq? was hf packet vs hf propagation beacons

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-02 00:00:00 UTC
From: pmarkham@up.net
Message-ID: <5uhbg2$6ts@drn.zippo.com>
Source record: 191043

Marc said:

So why the difference? I suspect that the frequency I'm actually
listening to is 14100.975. This corresponse to an AFSK frequency
of 2125 Hz -- the old RTTY standard. Perhaps there are a lot of
operators out there who use 1925/2125 for packet and never took
into account the difference between what they are using and
the `standard' of 1600/1800 Hz.

But I'm a newby at this and could be full of crap.

I say:

I am sure that some (if not many) do not understand they are
transmitting and receiving about 14.100 mHz. A very easy way to
understand the relationship between the indicated transmitter/receiver
frequency, the center of the tnc audio shift and the specific mark and
space tones used by your tnc is to tune to a known rf carrier, such as
WWV. You can tune the receiver up and down in frequency, in the
different modes, and read directly the frequency on the dial that
represents the actual mark, space and shift center frequencies. Most
tncs provide some form of indication when the received demodulated
carrier audio is at the mark, and space frequency, or somewhere in
between. Those indications can be used to determine the mark and space
transmit rf frequencies, also.

The 2 center LEDs of the frequency display of my KAM will illuminate
evenly, when the audio from the demodulated WWV 10 mHz carrier is at
1700 hz (with proper setting of rf gain, agc, tuning, etc.). With both
those center LEDs lit, in usb my dial indicates 9.99830 mhz, in lsb my
dial reads 10.00170 mHz. If I move the dial up or down 10 Hz, the
illuminated LEDs are now at some other position, indicating my receiver
demodulated carrier audio is off from the center of the selected shift
of the tnc selected mark and space filter requencies.

Knowing the default shift of my KAM is 200 Hz, IE. +/- 100 Hz from the
center of 1700 Hz, then I can do the simple arithmetic to determine the
rf frequencies of the mark and space tones. eg.

usb mark = 9.998300 + 1600 = 9.999900 mHz
" space = 9.998300 + 1800 = 10.000100 mHz

lsb mark = 10.001700 - 1600 = 10.000100 mHz
" space = 10.0001700 - 1800 = 9.999900 mHz

The transmitter would transmit those mark and space rf frequencies and
a locked receiver (transceiver) would receive the same, demodulated to

the tnc audio mark and space filter frequencies.

Note: Once I know what the receiver dial indicates relative to the actual center of my tnc audio shift I can tune to within 10 hz of any desired frequency for packet operation and know exactly, within 10 Hz, the rf frequency of my mark and space tones, even though my receiver frequency indicator may not be calibrated.

A thorough understanding of the audio and rf frequency relationships relative to the WWV standard, for all digital modes, will allow you to preset the receiver frequencies for a schedule, and be within 10 Hz of the desired frequency. The desired transmitter frequency will be within the design and calibration accuracy differences between the transmitter and receiver.

Needless to say, the helpfull? hints above are to be considered in the context of the technical design and condition of your equipment, the jargon/standard used to define a particular working frequency, etc.

Marc, as for your speculation being "newbie" crap; I doubt it. Many of the calls I see attached to "I know on what frequency my node operates" tnc beacons, indicate an Extra at the wheel, who appears not to know on which frequency his equipment operates. All of us have something to learn ;-)

Actually, careful observation says we should be at the peak sometime
around 2000-2001. Of course, observations aren't always enough to
back it up...there's a BIG minimum every few hundred years, effectively
wiping out sunspot maxima for about 30 years.

May it not happen during my lifetime :)

BTW, the sun COULD explode tomorrow, or the next day; you NEVER know,
although probability says it won't happen. Of course, if it DID, I'd
predict something like THE BEST propagation ever seen -

for about 12 hours, until we're vaporized.

(may this ALSO not happen anytime soon)

If you know how much power it takes to make your receiver indicate "S9"
on its S meter, you could build a 20 or 40 or 60dB attenuation pad and
load the transmitter with it and feed the attenuated signal into your
receiver. You would also know the frequency of the QRP rig, and also
you could tune the radio to the harmonics to check for excessive harmonic
emmission. If nothing else, you'd get a relative ratio of power when
tuning it up.

Does "Lad" in Southwest Ohio/Central Kentucky mean anything to you?

This was the case of a kid who was using the old man's ham gear to make pirate tranmissions and broadcasts. He was pretty notorious on 40 meters until he started interfering with legitimate shortwave broadcast stations.

Assume nothing until you hear a callsign. The code still works quite fine as a lid filter, despite the isolated incidents you harp on about.

3553. Re: how about a CW subband for no-code hams in HF?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-02 00:00:00 UTC
From: rpd910@aol.com
Message-ID: <19970902020200.WAA24558@ladder02.news.aol.com>
Source record: 191120

>How about we provide the no-code hams a small segment of a CW subband
>for them to "wet their appetite" for code?

There are already provisions anywhere above the ten meter band for code.
Six meter area would be the best, as that can become fairly long distance
without tropospheric ducting. Two meter areas are also set aside, although
above that would be pretty much line of sight, except for ducting cases.
Really, they would have to know code first before getting on the band, and
if they have went that far, then they could just get the 5 WPM test.
I know what you mean though, a local person here in RI runs code over 2
meter FM by keying the mic and using a code oscillator on a simplex
frequency, getting everyone up to speed.
As a matter of policy, I do keep around the CW Novice bands, and help
those out with code (Last time, I talked to an extra doing the same thing,
neither one of us knew the other could be more than 5WPM, hehe)

3555. Rooftop Antenna Question

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-02 00:00:00 UTC
From: hatara@aol.com
Message-ID: <19970902023401.WAA27342@ladder02.news.aol.com>
Source record: 191122

Im strictly an appliance operator and have been for twenty years now and one would think that some of the "jargon" would have rubbed off by now,but alas, no such luck! I recently installed a metal type tyle roof and ever since I have experienced RFI with the neighbors but only on 20m. My antenna is a Cushcraft tri-bander up twenty feet and guyed with 4 stranded wires which I have broken up with insulators at random lengths. Prior to the new roof -no problems. Any ideas about what I might try?

^^^^^^^^^^^^^^^^^^^^^^^^
>>You know full well that the FCC has stated transmitting atop an unauthorized
>>transmission is *not* intentional interference.

>Sorry, Jeffy. I didn't say it was ILLEGAL,

Neither did I. You said "intentionally interfere" and the FCC has
said that it is not possible to cause intentional interference to
unauthorized transmissions.

> If the primary purpose of your transmission is to cause
>interference to the other station, it is poor amateur practice to do so.
>Doesn't matter whether the other station is licensed or not.

Again, you are not interfering if the transmission is not authorized.

>How about YOUR illegal HAM friends who "slide" DOWN to freeband 11m when
>the band is open? Seems there's a lot more hams on the freeband then there
>are CB'ers on 10.

I cannot comment on CBers with ham licenses and what they do. But I'm
perplexed as to why an HF-licensed amateur with 160, 80, 40, 30, 20,
17, 15, 12, and 10 meter privileges would bother operating on 11m or
the freeband region between 11 and 10. Maybe you can document your
claim by passing along the callsigns of all these hams that are free-
banding.

You're getting rectification from the joints of your metal roof. Weld all
the roofing panels together and your problem will disappear. I know that
sounds drastic, and if you can't do the welding yourself, it could be expensive
too, but it is what it will take to get rid of the problem.

Of course you could move the antenna *much* further away from the
roof. That would reduce the magnitude of the problem, though it probably
won't eliminate it completely.

This is, unfortunately, one of those things you should have thought about
before you did it.

I find your comments rather interesting.
I would love to know where you are getting your information from.

Over the past few weeks (and this has been repeated yearly for the
past 10 years), I have been doing volunteer work at a local amateur
radio display booth at a major area fair.

One of the local amateur radio dealers has been very nice to us and
has lent us modern amateur radio equipment.

It is by no means old-fashion technology.

The kind or radios many hams are buying, these days, seems to be in
competition with the commercial radios of today. The only real
difference is that the commercial radios have better front ends and
have less channel coverage.

Our radios, of today, do have current technical content.

Sounds like an attempt to get around the "broadcast" law. If they are
doing this, they are illeagle. No one is above the law. Only the ARRL
has an exception to that rule of no broadcasting. This is another
example of a bad apple among us.

My $.02 on this issue.

When I got my no-code ticket, I had every intent to upgrade. I am very happy talking to a great group of people on 2m and 440. They are very polite, and go out of their way to be helpful. Now, when I hear from the HF people on this news group, I lose interest in upgrading. Why would I want to talk to someone who doesn't like me without even meeting me? Why would I want to work hard just to be insulted by a group of mean old men?

You guys have given HF a bad reputation. What makes you think that a no-code would even want to upgrade just to get the "privilage" to be insulted by you?

I am still studying code. I have about half of it at a very slow speed. It may take me another year to get to even 5 words per minute, but when I get there, I hope you no-code haters aren't there to greet me. Cause, if you are, I will just go back to where I feel welcome!

BTW: I would be more willing to talk to you on VHF and UHF where you could help me learn more about this great hobby. But please, don't ruin it for the rest of us by complaining about how much you love your piece of the hobby and how wrong every body else is. We all have our own piece of the spectrum. Let's try sharing for a while. If you are having difficulty with that concept, ask your mother about it. I am sure she tried to teach it to you at one point in your life! :{)

3580. Re: how about a CW subband for no-code hams in HF?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-02 00:00:00 UTC
From: Tom Branch <k4nr@mindspring.com>
Message-ID: <340C4CDF.5BDC@mindspring.com>
Source record: 191147

Bob,

Many extra's hang out in the novice subband today. I've worked more
extra's than tech+'s over the past year. Elmering is not dead as many
would argue and it is the real key to the success of amateur radio.
Without an elmer, I would probably not be where I am today.

73 de Tom, K4NR

>> I've heard of extra license holders hanging out in novice bands helping them get better at code, way back in the code-only non-renewable novide days. <<

Hi Jeff
I hope you do not consider the hf voice users to be the example of hf
amateur radio.
When you get your code speed up, I am assuming you are refering to the
American Novice licence (I am a Canadian), you should find that the cw
operator is much more polite.

Before you give up on hf, give hf cw a good run for its money. Spend a couple of years at least on cw and you should find that cw is more pleasant that voice.
There is nothing wrong with voice but give cw a good try.

Hi there, Keith!

Well I can tell you that Trio is an old model of Radio equipment. I have a friend that just came into some Trio stuff and he really likes what he's got. As for particulars, I am not going to be any help, but I am sure you'll hear from other boatanchor fans who know exactly what it is and what value it has.

Sounds like a good reason to join the hobby! =) As for antennas, you do need some more "current" antennas if it will be used, but all in good time. If I can be of any help in getting you some Ham Radio information, feel free to write.

7-3,
Jim KB8TNQ

It's not my job, but I will jump in anyway . . . :-)

The ARRL Circulation Department does indeed want to make sure you receive your QSTs and they will appreciate any reports of late delivery. Although many of the late-delivery reports are sporadic, every once in a while we hear of a regional problem that we can sometimes help track down. Our Circulation Dept can also handle replacements for any that are damaged in the mail. Though it is expensive, replacement copies are sent First Class mail to help ease the pain a bit.

Unfortunately, ARRL is not able to influence the US Postal Service a whole lot. Fortunately, they do manage to deliver most of the issues on time and in good condition.

Hello all

Here is a URL that will give all the testimony before the House Commerce Committee back in February of this year. While it may not pertain exactly to H.R.2369, it will give you a sense of who the players are, and their thinking on the issue. Most of the files are PDF, requiring the Adobe Acrobat Reader to view.
A quick look at Commerce this morning showed no scheduled hearings on HR 2369 for this week. But remember...the little monsters are back in session again.
Please don't get sucked into the "This only affects those other people" thing. Keep in mind that what they take away from the hams this week they will take away from the scanner enthusiasts next week, or maybe the SWL's next month etc. etc. etc.

Carl:

I'm not 'siding' with anyone but I think you're really pushing the
envelope here. I think anyone who is rational would read this comment
and understand that the point was that the CW portion is usually free of
QRM, and does not have the typical problems associated with phone.

Your not only taking things out of context, your making up things that
simply were not stated in the post. You say "Jeff advocates ban of all
modes besides Morse" where does he do that? I believe his comment was
"tune down the the first 100KC of 80m (or any HF band)" Well in the
first 100KC you'll find CW, RTTY, Packet, AMTOR, and several other modes
besides CW. The comment "(Too bad all the bands aren't phone-free such
as our beloved 30m.)" hardly qualifies as cult-religion-style fanatic.

Tim

Hi JJ,
Consider the following situation. The NE-QRP folks widely use 3579 kc as
an Eastcoast CW freq'y (they were marketing kits with that xtal supplied).
Now, 3579kc was chosen due to the availability of xtals for that freq'y
(any old color TV has a 3579 xtal). But with every TV set emitting a
"signal" on that freq'y, are those ops committing "intentional interference"?

My only response to Carl's remarks below is that I said "phone-free". Phone
is the mode of choice for our small percentage of HF "riff-raff" - eliminating
it would result in very "clean" bands and a tremendous gain of bandwidth for
the remaining modes.

Jim:

Not sure who your addressing with the "know not of what you speak"
statement, but who ever mentioned part 97? furthermore who mentioned
whether it was legal or not? Seemed to me the discussion was revolving
around whether it was good amateur practice and whether it was
intentional or not.

I've been told by Radio Shack folks that even though they sell the catalog, you can NOT use your Radio Shack credit card to place an order. Radio Shack also said, they can order anything from it FOR YOU. AND that's where they get most of their parts from as well. I too, got one. The selection isn't too impressive, at least parts wise, which is why I took it in the first place. I was looking for parts. The sales clerk was getting miffed at me looking at it, for free. SO I bought the damned thing.

No, I doubt they'd put many out of business. Not enough selection to start with. Prices are a bit debateable depending on how you look at it.

Just my 2 cents.......

When I hear the local CB ops here in Hawaii using the 10 meter band I usually drop my call and remind them that while I am sure they want to try out thier newly modded rigs the Freq they are on reserved for lisenced amateur stations. They usually say HI and move on down where they belong. Stan/KB8JLV

3613. need help to solve computer interference problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-03 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <340ddb27.2224117@news.sprynet.com>
Source record: 191074

About 2 ish weeks ago, I started to have a very unusual problems with my computer.
(1) The monitor would go into the power conservation shutdown mode about 6 - 7 minutes after the mouse has stopped moving, even though that feature had been disabled.
(2) The time clock would stop while the monitor was in shut down mode.
(3) After being on for serveral hours, when I attempted to do 'restart the computer' the computer showed 4 megs of ram rather than the 16 megs, I know is installed.

On Tuesday, I accidently found the cure but am very curious as to why.

About the time the problem started I had connected the cable, from my tnc to the computer, to the computer, but had not connected the cable to the tnc, eg it was connected to the computer but the other end was not connected.

On Tuesday, for some reason, I decided to disconnect this cable. The problems mentiond above disappeared.

Any thoughts as to what happened?

At this risk of over theorizing this, the cable is about 6 feet. I am wondering if it was acting like an antenna as was picking up the cordless 48 mhz phones, in the house.

I am open for suggestions, thoughts, ideas, etc.

SWARM IS ON SALE FOR A LIMITED TIME!

Effective immediately and remaining valid through 30 September
inclusive, our sophisticated Solar Warning And Realtime Monitor (SWARM)
software is on-sale for $200 USD. This is a savings of 33% over
the regular price of $300 USD. This price will remain valid for purchases
made during the period of 03 September through 30 September inclusive.
Thereafter, the price reverts back to $300 USD.

This is the first sale price ever offered for SWARM. It is rare for our
software to go on sale, so I would suggest everyone who is interested take
this offer seriously. It likely won't be repeated for some time.

Persons interested in taking advantage of this limited time offer
should download, print-out and send us the sale order form located at:

http://solar.uleth.ca/solar/www/swarm-sale.html

Complete details regarding this sophisticated software can be
found at: http://solar.uleth.ca/solar/www/swarm.html

Questions or concerns unanswered by the above sources can be directed to
Cary Oler at: COler@Solar.Stanford.Edu or Oler@Solar.Uleth.CA.

Please take the time to look at some great audio tubes up for bids at eBay Auction web. I have 20 used/tested 7591. To get to the bidding page, just follow the following link for most browsers, the link will be in blue and you can click directly on it. The description at eBay is below.

Thanks for reading,
Christian Magee

http://komodo.ebay2.com/aw-cgi/ItemISAPI.dll?ViewItem&item=171478

This is a lot of 20 individually boxed, used 7591s. Each tube has been tested on a TV7 with excellent results. This is a rare opportunity to retube all of those Scotts and Fishers out there. The manufacturers range from GE to Westinghouse. There is a nice quartet of McIntosh 7591's in here. All of the getters (shiny part on the inside of the glass) look good. Winner pays additional shipping to anywhere in the USA. A reasonable reserve has been placed to insure a befitting final bid. For any questions feel free to email me. Good luck and enjoy the bidding.

Unfortunately there is no federal law that requires "landlords" to allow
renters to put up DSS antennas. The preemption that was finalized about
a year ago only deals with DSS users that have an ownership interest in
the location where they plan to install the antenna.

You are talking about a landlord/tenant relationship, right? Or is this
a homeowner/homeowner-association issue?

The preemption rule is part 4000.1 (47 CFR)

The jammers are unidentified stations. I'd like to know how you've figured out
specifically who they are. Enlighten the rest of us.

As for the stations that *do* identify, they're obnoxious and boorish, but if
they have a good time, what difference does it make to you. It sounds to me as
if they speculate as to who is jamming as much as you do.

This discussion about the death of Amateur Radio is bordering on the hilarious! But at the same time, if we'd take the time to elmer someone new into the ranks, we'd never have to worry about Amateur Radio's demise, would we???

There is enough petty bickering in this group to turn a prospective Ham 180 degrees.... so my question is: "Is that the reason the pettiness is so prevalent here?"

C'mon, lay down the attitudes for 24 hours and offer one GOOD, SOUND idea for making this hobby fun again....then add your post to this one. And please, no more about CW (pro/con) and the like.

And for the gentleman whose daughter says her ticket is the ONE thing she's not proud of: Have you ever asked her why?

7-3,
Jim KB8TNQ

Keep an eye on QST and some of the other Ham rags! They DO occasionally prosecute some of the more serious offenders, but we have to get that bill passed and signed, so the FCC will work more diligently on eliminating illegal activity!

Maybe someday, this hobby will be fun again-after the offensive forces are neutralized!

7-3,
Jim KB8TNQ

Digital displays and a few fancy parts do not a technology make.
Especially when used for such earth shattering high tech communications
like CW traffic nets. High tech in 1917 but certainly not in 1997. There
is no area of amateur radio that is even close to being high tech.

Laura is right on target but I have concerns over the hobby being able
to rethink it self.

I too agree with Laura, If there is anything hi-tech about our equipment it is coming from the manufacturers and not from us. The driving force behind the manufacturers doing it is a reduction in production cost and maximizing profits. They can add the newest bell and whistles to a radio and actually make the cost go down. There has been nothing new, just new technology from somewhere else used to do an old job cheaper.

I wonder how long this can continue to go on... I just read where a new " ham" asked the question if he could listen to the frequencies that he is licensed to operate on . What kind of a question is that??? Does the information required to obtain an FCC amateur license omit the most basic right of the free world? The ability to listen to free speech. The entire problem as I see it is that the basic amateur radio operator doesnt have a clue what the hobby is about... And the FCC is most to blame for the entire mess.. The FCC exams worry more about if a person can copy code and remember word for word the study guide than if a person has an understanding of radio. The study books are the FCC exam in reverse.... no thinking is required. I can tell you that anyone can obtain the license all the way up to an extra class without having a clue about electronic theory or anything about radio. I know that this is true.......just listen to the questions that are asked by licensed radio operators Dave K2IJY

If you read his post he indicates "listen to the bands in which I am
allowed to operate".
In other words as you are licensed for the bands, you are authorized to
listen. stan

It matters because folks who hear them assume that *all* hams
are such low-life cretins ... and that all ham radio useage of spectrum
is so pointless and wasteful ...

If *you* don't mind being lumped in there, that's your lack of self-respect
... many of us don't like being lumped in the same slime puddle as
those cretins ...

OK... in perspective - since Anand is a U.S. amateur (in Maryland, I beleive): In the U.S. even an unlicensed person can do both when it comes to amateur communications.

One thing to consider Laura, who is building and designing our
equipment. I wouldn't be surprised if amateurs are designing our
equipment.
An amateur friend of mine, licenced as a teen in the early 60's got a
job with a company which designs cellular phones. Amateurs may not be
on the air designing and using their up to date equipment but they are
doing their fair share designing our countries communciations systems.

Also, even though it is somewhat out of date now, what about packet
radio. During the mid 80's, packet was highly regarded by the
communications industry and many landline users were jealous of what
we had.

The internet went passed us because they were technically more
flexible than us and had the financial resources to grow.

If we had have given our packet bbs operators $10 per month per user
from the mid 80's packet would be much better than it is now.

You sure can, and it is a good idea too. In fact you can listen
to *any* amateur band, whether you have a license or not.
Amateur radio is currently exempted by law from any form
of restriction on monitoring.

In general, you can listen to anything anywhere in the spectrum
with a few specific exceptions (primarily cellular telephone or
situations that would be considered theft of services, IE wireless
cable), but those exceptions may grow much larger if currently
proposed legislation passes. So far, there is no indication that
listening to amateurs is threatened in any way however.

I am with you, I have seen that most of the CBers in my area, Halifax County Nova Scotia use 10 meter rigs converted to 11 meters. Going below and above the 11 meter band (26 to 30 Mhz). What realy ticks me off is that there are Ham operators using these radios on 11 meters only. They are talking above and below the "normal" CB band. I have been in contact with the DOC here and they tell me that unless they get several complaints about an individual, that the CBers have to "GROW UP" and police the band themselves. The fine for a amateur radio operator as well as a CBer who is operating these types of radios in the 11 meter band is $ 5,000 (cdn) a day. There are several distribitors in this area who sell these radios (HR2510, RCI 2950, RCI 2970) already modified to anyone who has the money and no questions asked.

Since you say Landlord, then Im assuming you are a tenant. That
being the case, you don't own the property and the landlord (IMHO)
is under no obligation to allow you to erect any antenna at all.

The Federal telecommunications act deals with zoning restrictions
and restrictive covenenats on property. Nothing I've seen in
any way mentions tenant/landlord restrrictions.

CORRECT!

Comm is a commodity today. Nothing more and nothing less.

The novelty of ham radio died sometime in the 80s. Some of us are
just now realizing that and here it is deep into 1997.

I wonder if that means legal or illegal? A cber transmitting in the amateur
10 meter band is doing so illegally. Period. As an licensed amateur you mean
to tell me I'm supposed to just move if the cber starts coming on frequency to
interfere with my QSO? I don't think so. I had to work for my privledge, screw
them. THEY move not me. If we don't defend out bands they WILL end up going to
the cbers and freebanders. I stay off the cb band, let them do the same. If
the FCC or ARRL won't do a thing about this kind of nonsense. Who else will???

Continue your search now by looking at the definitions of "radio communication"
and "signal." Then ask yourself if illegal/unauthorized transmissions fit
those definitions.

Probably 156.80 MHz (the VHF maritime calling/distress frequency).

> Go listen to 3.850LSB sometime. There you will hear a bunch of old
>farts cussing each other, and/or talking bad about each other regularly.

who probably amount to less than 0.1% (about 600) of all licensed U.S. hams.
Now, how about focusing on the 99.9% law abiding operators?

This discussion concerns unlicensed operators on 10m; you've wandered out
of the loop.

> I will be surprised if the FCC does not suck up some more
>frequencies to sell off real soon.

Wrong portion of the spectrum. We haven't lost any HF bands since
the late 50s (11m). Over the last decade, we've *gained* the 12, 17,
and 30m bands, and stand a good chance to gain more M/HF bandwidth
(see the NTIA release).

Jeff

11:45 EST, 9/3/97
I would first like to apologize for this message being cross posted to different newsgroups. I am trying to locate family members who are transporting sailboat from Miami, FL, USA to Tampa, FL, USA. This is a new purchase, unfortunatly not many details. Boat taken delivery of on 9/1/97in Miami, unfortunatly do not have name of vessel (we belive it is the "Montana"?), 47 foot sailboat, do not know what communication equipment is aboard (HAM, SSB, VHF, CB), all who can assist in broadcasting for response wouldl be greatly appreciated. The family aboard is the Hoffmans, father Bob, mother Kathy, son Brian (B.J.), beleived to be in Florida Keys approximately now. If contact made, please inform them that Don Black passed away, services to be held Saturday 9/6/97am, St. Peters, Medford, NJ. Please contact Wendy Black-Fenske or any family member for further details. Thank you in advance for any and all assistance, blessings to all.

Sincerely,
P.J. Thompson III

David A. Nye MD (nyeda@uwec.edu) * Midelfort Clinic, Eau Claire, WI
About two thirds of Americans polled favor a tax-supported single-payer universal health care system, yet we are told that because the insurance industry and the AMA oppose it, the idea is "politically impractical". Tells you something about the state of our democracy, doesn't it?
10 M was open here again yesterday evening, second time in about a week. I discovered it just as the band was fading. Some advanced warning of potential band openings on 10 would be helpful. I see I can buy programs or subscribe to newsletters that promise better information, but I'm not sure what exactly I would be getting for my money. I can't make too much sense of all the things I find when I look under propagation on the net.

What methods do you guys find best to alert you to possible 10 M band openings aside from just leaving your rig on all the time tuned to 10? Is there such a thing as a home MUF meter? Thanks and 73,

David Nye, KB9PSL * Eau Claire, WI * nyeda@uwec.edu

Is ham radio less important because it's not on the leading edge of technology? When was it ever? I've learned one hell of alot about electronics since I got into this hobby. I took what I knew and turned it into a career. Why does it have to be so high tech and leading edge to have meaning?

The process of black and white photography has not really changed since they started putting silver on paper. While the equipment is better you still print on paper and the image is still made from silver. Would anyone advise thier friend or child not to get into B/W photography because it's dying or isn't high tech anymore? Why is ham radio so different?

Call it bad amateur practice if you want, but I will 'jam' any of
these illegal cb ops that I can who try to use the 10 meter band.
I have spoken to the FCC about this and they do not consider any
amateur who interferes with these illegal operators to be engaged in
any illegal activity, as these unlicensed operators have no authority to
be on the amateur bands.

>Our radios, of today, do have current technical content.

Bells and whistles on Japanese radios do not represent technical content of the *amateur service*. Most amateurs don't understand the radios they buy, couldn't design one, couldn't build one, and couldn't repair one. The *service* no longer has technical capabilities, even if it *buys* radios incorporating modern technologies.

And in another sense, the *communications technology* used by amateurs hasn't changed very much in the last half century. It is still centered on Morse encoding or simple analog voice modulations. While the rest of the communications world has embraced superior digital communications techniques, amateurs have relegated them to niche activities (often poorly implemented at that), or have completely turned their backs on them.

We *could* be making extensive use of spread spectrum, but we aren't. We could be making extensive use of FEC techniques, but we do not. We could be making use of ALE techniques, but we do not. We could have extensive high speed networks, but we do not. Etc.

Why are we still using dumb repeaters when every city should be served by an amateur trunking system or an ESMR system? It would use our spectrum much more efficiently, and provide us much better service at a lower total cost, but we remain 40 years behind the curve in this area.

Why are we creaking along with 1200 baud AFSK when we could be doing 56 kb, or 2 Mb or more? We once led in digital radio communications (and not that long ago), but today we are bringing up the rear.

Why are we creaking along with manual Morse when we could be using error correcting digital techniques with many times the throughput and weak signal performance in essentially the same bandwidth? The technology is available, and coming into near universal commerical and military use. But amateurs are lagging behind. And why don't most amateurs even *realize* that we *are* lagging behind?

Etc. Etc. Etc.

In summary, to most of today's amateurs, amateur radio *is* a personal communications service, little different from cellular phone, except for the monthly and airtime charges. Amateurs don't understand how it works, and many don't *care* that they don't understand how it works. They just want to play radio games.

Some amateurs *do* want to understand their radios, but they think that means that they must limit themselves to only the most primitive of radio equipment. They think that they must remain in the past. That is *not* true, it is a self-imposed self-delusion borne mainly of the ignorance fostered by myths and traditions which have not been placed under critical scrutiny. In most cases, modern integrated communications is *easier* to grasp than the arcanities of past methods. And it is much more powerful.

The old joke used to be, "Faster, better, cheaper; pick any two." But today, we can have all three if we can raise our blinders just a *little* bit. If we don't, then we truly are just CBers who beep. I believe amateur radio is supposed to be more than that.

>it is genuinely illegal to even listen to things you're not
>supposed to. In others it's OK to listen, but not to
>divulge what you heard.
>--
And the United States of America, where everyone trumpets the freedoms we have, is one of those countries where is is "genuinely illegal to even listen to things you're not supposed to." The cellular telephone folks pressured our Congress into making it illegal to even listen to the cellular telephone frequencies. They were supposed to begin encrypting transmissions to assure privacy so this restriction could be lifted. That never happened, AND our Congress is now preparing to make it illegal to even listen to an assortment of additional frequencies. I wonder how long it will be until all we are permitted to listen to is domestic broadcasting (no foreign shortwave or anything else).

SB PROP ARL ARLP036
ARLP036 Propagation de K7VVV

Solar activity continues another week of good conditions with heightened sunspot numbers and solar flux. There are a number of good indicators, and one is that the average solar flux for the previous ninety days rose two points this week to 75, while the solar flux on every day this week was high above this average. Solar flux above the moving average indicates a positive trend, and this has been the case for a month now. The last day that the solar flux was below the ninety day average was back on August 4, so this is a good indication that cycle 23 may finally be under way.

Along with the increased solar activity came geomagnetic instability caused by coronal mass ejections. The planetary A index has been 19 for the past two days, and was also in the teens at the end of August. Look for possible instability again around September 24 and 25.

Based on the previous solar rotation, solar flux may dip below 80 after September 10, then above 80 ten days later, and above 90 after September 25. Over Friday, Saturday and Sunday this week it is expected to be around 93, 90 and then 85.

An August 28 news article on the Reuters wire service detailed some findings from the Michelson Doppler Imager--which is aboard the Solar and Heliospheric Observatory--watching the Sun from almost one million miles from Earth. The article mentioned complex patterns of currents below the Sun's surface which produce sunspots when they contact plasma. These streams can rub against each other and the opposing forces shoot out material in the form of solar flares.

In other news NASA launched the new Advanced Composition Explorer solar observatory, which is on a five year mission to study solar flares and provide earlier warning of solar storms. It will monitor

particles streaming from the Sun, and scientists hope to be able to predict geomagnetic storms an hour earlier than at present.

Sunspot Numbers for August 28 through September 3 were 61, 67, 69, 80, 90, 67 and 55 with a mean of 69.9. 10.7 cm flux was 90.5, 91.5, 92, 96.4, 93.4, 91.7 and 93.1, with a mean of 92.7, and estimated planetary A indices were 16, 15, 11, 4, 4, 5, and 19, with a mean of 10.6.

It is not illegal to monitor cellular phone transmissions. It is illegal
to sell scanners which can tune these frequencys or that can be easily
modified. And it is illegal to divulge or use any information that is
monitored, but that regulation has applied to all utility and commercial
transmissions for years.
If someone has information to the contrary please post it.

Does anyone out there know of a mod to the ICOM IC820 that will allow the radio to receive below 144 Mhz? I'm interested in the aircraft band specifically 118-130 Mhz or there abouts. I don't care anything about enabling the transmitter out of band...but the receiver would be nice. I'm hopeing its just a hold down some number of front panel keys and turn the power on sort of thing... but if not I'll get into the inards of the radio...THANKS

That advice makes no sense to me. I know that silicon devices can
operate indefinitely at far higher temperatures than water-filled
carbon-based creatures like myself. The rear of the external case is
not a plastic shell but it is the metal heat sink for the output
devices that is expected to attain temperatures usually encountered
in structures hidden from fingers around the rears of mobile rigs.

FOALE SET FOR SPACEWALK

Following a practice session indoors earlier this week aboard the Mir space station, US astronaut Michael Foale, KB5UAC, and his Russian cosmonaut crewmate, Anatoly Solovyov, are set to do the real thing--a nearly six-hour spacewalk--early Saturday Moscow time. NASA approval for Foale's participation in the spacewalk came yesterday at the eleventh hour. Foale and Solovyov will spend several hours outside Mir looking for holes in the Spektr module, damaged June 25 by a collision with an unmanned supply rocket. The two first will assemble handrails on the Spektr module that will provide a handhold during the spacewalk. They'll also install a back-up carbon dioxide removal system.

Despite his busy schedule and the onboard power limitations, Foale has remained active on Amateur Radio, primarily using 145.985 MHz simplex while the spacecraft is over North America. An experiment begins Saturday, September 6, to move both voice and packet operations to 70 cm for three weeks (see related story, Mir Ham Operations QSY to 70 cm, below). Foale recently told MIREX's Miles Mann, WF1F, that due to his heavy workload, he may not be able to reply to everyone's packet mail but will do his best. Mann reports that Foale told him this week he did not expect to have time to be on the air again until Sunday.

Over the past few weeks, the crew has taken small but significant steps to improve conditions aboard Mir, and especially to restore power to the space station. The crew already has reconnected most of the solar panels attached to the damaged Spektr module, upping the station to an approximately 70% power level. But the crew has been unable to determine why the motors that aim the Spektr's solar panels are not working. Foale and Solovyov will position the panels manually during their spacewalk, if the crew is unable to get the motors working before then.

Repair work to the station has been estimated at $2.5 million.

MIR HAM OPERATIONS QSY TO 70 CM

Starting on or about Saturday, September 6, and continuing no later than September 29, ham radio voice and packet operations aboard the Russian Mir spacecraft will shift from 2 meters to 70 cm. An "experimental" worldwide FM simplex frequency of 437.650 MHz will temporarily replace the current 2-meter operating frequencies. Operations will return to 2 meters after the experiment ends. In the meantime, the shift could make it a bit more difficult to work Mir. For starters, power requirements will be higher than on 2 meters--25 W ERP or greater--although contacts using an H-T are not out of the question. Also, some transceivers do not cover the satellite subband (435 to 438 MHz).

The Mir International Amateur Radio EXperiment (MIREX) is conducting the 70 cm test based on suggestions from several Amateur Radio satellite groups who are interested in the feasibility of operating Mir and the International Space Station on 70 cm. MIREX hopes the experiment will determine whether the 70-cm frequency receives interference from the existing commercial VHF equipment on Mir and whether 70-cm operation will interfere with onboard equipment.

More important for simple ground stations, however, is whether they'll be able to compensate for 70-cm Doppler shift on voice or packet. MIREX President Dave Larsen, N6CO, concedes that Doppler will be the biggest challenge for earthbound hams trying to work Mir on 70 cm. The Doppler on 70 cm is plus or minus 10 kHz. Most radios include 5-kHz tuning steps, and to work Mir on voice you will need to get within 3 kHz of the Mir receiver frequency. To work Mir on packet, the frequency error must be less than 2 kHz.

Miles Mann, WF1F, of MIREX reports he talked to Mike Foale, KB5UAC, aboard Mir on 70 cm on Thursday, September 4. Mann was mobile at the time, running

35 W. He reports very good signal quality during the 10-minute pass, which was at close to 60 degrees. Mann said he compensated for Doppler by programming odd-split channels in advance. He reminds users that both the transmit and receive frequencies must change, if you program channels in advance.

Larsen said this week that if the experiment does not work out, "it will be cut short." He said he hopes a filter that could be sent to Mir as early as October will minimize desensing of the 2-meter transceiver by Mir's commercial equipment on 143 MHz.

The Mir Personal Message System (PMS) currently consists of a Paccom Handi packet terminal node controller (TNC) connected to a Kenwood TM-733 2m/70cm transceiver. The antenna is an externally-mounted dual-band antenna, similar to a mobile antenna.

To comment on the experiment or for more information, contact Dave Larsen, N6CO, doc@volcano.net or Miles Mann, WF1F, Miles_Mann@Pictel.com.

PHASE 3D PROGRESS CONTINUES

Despite scheduling setbacks, an international team of Phase 3D project workers continues final mechanical and electronic integration efforts on the satellite. Teams from Germany, Belgium, Slovenia, Hungary, Japan and the Czech Republic joined their American counterparts August 18 at the Phase 3D Integration Laboratory in Orlando, Florida in an all-out marathon to prepare the satellite as quickly as possible for a safe and successful launch.

"We are happy to join our American partners in this effort," said AMSAT-DL (Germany) Vice President Werner Haas, DJ5KQ. "The cooperation has, once again been excellent between our two groups."

Even before the arrival of the European contingent, workers at the Integration Lab were racing to make needed structural modifications to the satellite. The modifications became a requirement once it became known that Phase 3D would, during its planned Ariane 502 launch, most likely would encounter greater-than-anticipated environmental loads.

AMSAT-NA Executive Vice President Keith Baker, KB1SF, reports from Orlando that these significant mechanical upgrade efforts are proceeding. "The folks here at the Lab have been burning the midnight oil over the past several weeks to make these structural changes on a work schedule where 16 to 18 hour work days have been the norm, rather than the exception", Keith said. He went on the note that, "These people have done an absolutely superb job under some extremely difficult circumstances. We all owe them a tremendous debt of gratitude for their outstanding work."

Over the past week, these round-the-clock efforts continued with the combined team's current activities installing and checking out a significant number of the remaining electronic and mechanical pieces into the satellite. The effort included installation and checkout of the spacecraft's momentum wheels, the RUDAK digital experiment, the 2.4 GHz and 24 GHz transmitters as well as a number of other transmitters, receivers and other equipment. In

some cases, the team needed to reinstall equipment that had to be removed to accommodate the structural modifications.--AMSAT News Service

FCC LEVIES FINES FOR UNLICENSED OPERATIONS

The FCC has fined Robert J. Powers, KB7TQA, of Puyallup, Washington, $1600 for operating on an unlicensed frequency. The action by the Compliance and Information Bureau was adopted by the Commission August 19. The fine stemmed from a violation that occurred a few months before Powers got his Technician ticket in April of 1993.

According to the FCC order, FCC agents from the Seattle Field Office discovered Powers on January 26, 1993, operating a radio station on 27.455 MHz "without authorization from the Commission." He was cited for violating Section 301 of the Communications Act. Agents used direction-finding equipment to trace the signal to Powers residence, and the FCC reports that Powers admitted to operating on the unlicensed frequency. Powers initially was fined $2000. The FCC subsequently reduced the forfeiture to $1600. Powers was ordered to pay the fine by September 22, 1997.

The FCC also cited Victor Pessaro of Melbourne, Florida, for CB radio service violations that occurred in early 1994. Following up on interference complaints, FCC agents tracked down Pessaro as he was operating on frequencies other than those authorized by FCC rules. In addition, Pessaro refused the FCC agents request to inspect his station. Consequently, the Vero Beach Field Office issued a Notice of Apparent Liability to Pessaro for $5750 for operating over the regulated power limits in the CB radio service and for failing to allow an inspection. The forfeiture was later reduced to $750, and the FCC upheld the fine in an order released August 22. Pessaro has until September 22, 1997, to pay his fine.--FCC

BEACH BALL BUNNY

In a strange twist on deliberate QRM, an Indiana ham radio fox hunter last month discovered a transmitter hidden inside a beach ball floating in the Elkhart River. The transmitter was on the frequency of a local repeater. Hours before making the find on August 11, Pete Ostapchuk, N9SFX, of Osceola, Indiana, had won first prize in a fox hunting contest involving fellow hams, according to a report August 12 in The Elkhart Truth newspaper.

The paper said local authorities were investigating the incident, the latest in a string of occurrences where devices were deployed to jam ham radio frequencies in the area. Another beach ball containing a transmitter had been found earlier in the same week. Four disruptive transmitters were found during February and March.

Ostapchuk heads the interference committee of the Elkhart County Radio Association. He told the paper that he'd found several of the devices himself using DF equipment.--thanks to Dan Caesar, K9EUV

ON-AIR EVENTS MARK AIR FORCE'S 50th ANNIVERSARY

The United States Air Force, formed by the National Security Act of 1947, celebrates its 50th anniversary on September 17, 1997. A QSO party in honor of the occasion is set for September 20-21. This event will be managed by the Razorback Radio Club of Honolulu, Hawaii. For details, see September QST, page 105, or contact Bernie Skoch, K5XS, e-mail 75376.12@compuserve.com.

The Peninsula Amateur Radio Club (PARC) will operate special event station W4MT from Langley Air Force Base in Virginia on September 6, from 1300 to 2100 UTC, in honor of the USAF's 50th anniversary. PARC will operate SSB and CW on portions of 10 meters (28000 to 28600 kHz), 15 meters (21050 to 21149; 21300 to 21400 kHz) and 20 meters (14115 to 14150 kHz; 14235 to 14340). W4MT also will operate 2 meters on 144.630 MHz. QSL to Rene B. Valladares, KE4WMG, 178 Goodwin Neck Rd, Yorktown, VA 23692.

FCC SEQUENTIAL CALL SIGN UPDATE

The following is a list of FCC sequentially assigned call signs issued as of September 5, 1997.

SOLAR UPDATE: THINGS ARE DEFINITELY LOOKING UP

Solar oracle Tad Cook, K7VVV, reports from Seattle, Washington: Solar activity continues another week of good conditions with heightened sunspot numbers and solar flux. There are a number of good indicators, and one is that the average solar flux for the previous 90 days rose two points this week to 75, while the solar flux on every day this week was high above this average.

Solar flux above the moving average indicates a positive trend, and this has been the case for a month now. The last day that the solar flux was below

the 90-day average was back on August 4, so this is a good indication that cycle 23 may finally be under way.

Along with the increased solar activity came geomagnetic instability caused by coronal mass ejections. The planetary A index has been 19 for the past two days, and was also in the teens at the end of August. Look for possible instability again around September 24 and 25.

Based on the previous solar rotation, solar flux may dip below 80 after September 10, then above 80 ten days later, and above 90 after September 25. Over Friday, Saturday and Sunday this week it is expected to be around 93, 90 and then 85.

An August 28 Reuters wire service report detailed some findings from the Michelson Doppler Imager, which is aboard the Solar and Heliospheric Observatory, watching the Sun from almost one million miles from Earth. The article mentioned complex patterns of currents below the Sun's surface that produce sunspots when they contact plasma. These streams can rub against each other, and the opposing forces shoot out material in the form of solar flares.

In other news, NASA launched the new Advanced Composition Explorer (ACE) solar observatory, which is on a five-year mission to study solar flares and provide earlier warning of solar storms. It will monitor particles streaming from the Sun, and scientists hope to be able to predict geomagnetic storms an hour earlier than at present.

Sunspot numbers for August 14 through 20 were 49, 60, 33, 23, 11, 11 and 11 with a mean of 28.3. The 10.7-cm flux was 79.5, 77.7, 77.9, 75.6, 75.8, 74.4 and 74.6, with a mean of 76.5, and estimated planetary A indices were 17, 8, 9, 9, 6, 5, and 5, with a mean of 8.4.

Sunspot numbers for August 21 through 27 were 11, 11, 11, 0, 32, 30 and 33 with a mean of 18.3. The 10.7-cm flux was 74.6, 75.5, 76.5, 77.7, 82, 83.8 and 81.9, with a mean of 78.9, and estimated planetary A indices were 9, 7, 4, 6, 4, 3, and 5, with a mean of 5.4.

Sunspot numbers for August 28 through September 3 were 61, 67, 69, 80, 90, 67 and 55 with a mean of 69.9. The 10.7-cm flux was 90.5, 91.5, 92, 96.4, 93.4, 91.7 and 93.1, with a mean of 92.7, and estimated planetary A indices were 16, 15, 11, 4, 4, 5, and 19, with a mean of 10.6.

JOHN R. SHIRLEY, ZL2AM, SK

Veteran ham and well-known military researcher and advisor John Shirley, ZL2AM, died July 20, 1997. He was in his early 80s. Shirley was awarded the Order of the British Empire in the 1950s for his success with tactical communications in Malaya. After retiring from the British Army as a Lt Colonel, he joined a US management consultant firm (Booz Allen) and was appointed to US Air Technical Intelligence at Wright-Patterson Air Force Base in Ohio. Later, he was moved to an operations research group working on Polaris submarine communications and received a letter of commendation from President Kennedy for this work. He also advised the military during the

Vietnam War, prior to retiring in 1970. Shirley had been a ham since 1931 and once worked as a shipboard wireless operator.--Irv Klepper, W3HGD

JOSEPH D. "DON" MOULTON, W2QUF, SK

Veteran amateur Don Moulton, W2QUF, of Denville, New Jersey, died September 1, 1997. He was 97. According to Glen Johnson, WB2MPK, Don went to work for Thomas Edison in 1922 and continued working for the Edison company until 1955. He had been a ham for most of his life and remained active on the air until his death.--Glen Johnson, WB2MPK

IN BRIEF:

* This weekend on the radio: The All-Asian DX Phone, LZ DX and Radio Club Panama 26th Anniversary Contests, the North American CW Sprint, and the 10th Annual Straight Key Week should keep you busy. See September QST, page 105 for details.

* Gate 3 grants soon: As more than a thousand vanity call sign applicants wait anxiously, the FCC in Gettysburg, Pennsylvania, continues doing some housekeeping in preparation for processing Gate 3 August 6 vanity receipts. An FCC spokesperson says personnel are very carefully matching up fees paid with applications filed to ensure that any call sign request that can be granted, will be granted. In particular, the FCC wants to be sure that no fees for electronic filers go astray. The fee-handling procedure initiated with Gate 3 is a change from how fees were handled under earlier vanity gates.

* Welcome aboard! Joe Bottiglieri, AA1GW, is the League's new Technical Information Service (TIS) Coordinator. He takes over that position from Mike Tracy, KC1SX, who's now the ARRL Lab Test Engineer. If you call HQ for an answer to a technical or equipment problem, Joe's your main man. He comes to HQ from the ham radio retail business (he worked for several years at Lentini Communications in Newington). A retread ham, Joe previously was licensed years ago as WN1RHJ and WA1ZXE. He's been back on the air since 1991 (first as N1NUV) and now holds an Extra class ticket. Joe enjoys HF and satellite operating, as well as 2-meter FM.

* Videos sought for ARRL library: ARRL Educational Activities Department is looking for videos produced by clubs and individuals for programs to include in our audio-visual library. We'll consider any ham radio subject. Examples could be technical talks on such topics as tower or grounding safety, fun club activities such as a left foot CW sending contest, or interesting educational talks such as how to become a Skywarn watcher. The ARRL video library makes programs available to clubs and individuals at nominal cost to cover program expenses. Please submit tapes with your name, call sign, address and daytime phone to Dan Miller, K3UFG, ARRL EAD, 225 Main St, Newington CT 06111; e-mail dmiller@arrl.org. For more information on our video Library, see http://www.arrl.org/ead/videos.html#tapes.--Dan Miller, K3UFG

* Amateur Extra class certificate discontinued: The Amateur Extra class certificate that has been available through the ARRL Awards Branch has been discontinued. However, some stock remains, and applications will be accepted while blank certificates last. Send a copy of your Amateur Extra license and a check for $5 to ARRL Awards, 225 Main St, Newington, CT 06111.--Chuck Hutchinson, K8CH

* Microwave Update '97: Microwave Update 1997 will be held October 23-26, 1997, at the Holiday Inn Conference Center, Sandusky, Ohio, on the shore of Lake Erie. The conference is hosted by Tom Whitted, WA8WZG. Thursday events include a tour of A.R.E. Surplus, Fair Radio, and CTR Surplus. Conference topics will be presented Friday and Saturday. Presenters include Al Ward, WB5LUA; Rus Healy, NJ2L, and Paul Shuch, N6TX. A barbecue dinner is set for Saturday evening. The conference fee is $40 is received by October 2, 1997 ($45 thereafter). The barbecue dinner is $18 a person. For additional registration and accommodations information, see http://www.wa8wzg.com/update97; e-mail wa8wzg@wa8wzg.com, or write Tom Whitted, 4641 Port Clinton East Rd, Port Clinton, OH 43452. Make checks payable to Tom Whitted Update 97.

* W1AW to be on the air from Hamcon '97: Hamcon '97, the 1997 ARRL Southwestern Division Convention, is set for September 12-14, 1997, in Riverside, California, and W1AW will be on the air (as W1AW/6) from the 12th floor of the Holiday Inn convention center. W1AW/6 will operate SSB and CW with three transmitters during the entire convention. SSB frequencies include 3875, 7250, 14250, 21350 and 28450 kHz; CW frequencies include 3530, 7030, 14030, 21030, and 28030 kHz. Two-meter operation will be on 146.55 MHz simplex. All contacts will be confirmed with a special QSL card. Special event coordinator is Fred Roberts, W6TKV, 5464 Peacock Ln, Riverside, CA 92515. The usual W1AW code practice and bulletin services will continue from ARRL HQ during the W1AW/6 operating period.

* CIA on the air: To commemorate the 50th anniversary of the US Central Intelligence Agency, special event station NN50CIA will be active through September from CIA premises in Northern Virginia. Suggested frequencies are 3550, 7050, 14050, and 21050 kHz on CW; and 3850, 7250, 14250 and 21350 kHz on SSB. QSL via KB4EFP, and include an SASE.

* AM from Gaithersburg: An AM special event station is set to be on the air from the 40th annual Gaithersburg, Maryland, Hamfest, sponsored by the Foundation for Amateur Radio. Hamfest proceeds help fund the Foundation's annual scholarship program. The vintage radio gang plans to have an AM station, W3PRL, on the air starting Saturday, September 6 (one day ahead of the Sunday hamfest). Plans call for using a modified T-368 military transmitter and an R-390A receiver manufactured by Stewart-Warner. Frequencies include 1885, 3885 and 7290 kHz, plus 14286 on Sunday only. For directions, station details, and more information, visit http://www.thebizlink.com/am.

* CCA QSO Party marks Collins birthday: The Collins Collectors Association will sponsor a QSO party starting 0400 UTC September 9 and concluding 24 hours later. CCA members will exchange membership numbers. Phone contacts are one point, CW or digital contacts are two points (double point credit

for contacts with W0CXX). September 9 marks the 88th anniversary of Art Collins' birth. Logs go to Floyd Soo, W8RO, 8232 Woodview Dr, Clarkston, MI 48348-4058; e-mail hires@rust.net.

* AMSAT-NA Annual Meeting, Symposium set: The AMSAT-NA Annual Meeting and Space Symposium will be held October 17-19, 1997, at the Delta Hotel, 801 Dixon Rd, Toronto, Ontario, Canada. The IARU Annual Meeting will be held Sunday, October 19, in conjunction with the AMSAT event. Registration (including proceedings) is $25 until September 15 ($30 thereafter or $42 Canadian at the door). The Saturday banquet is $30 per person (all funds US unless otherwise specified). Make checks payable to AMSAT. For registration and accommodations information, contact AMSAT, 850 Sligo Ave No 600, Silver Spring, MD 20910; tel 301-589-6062; fax 301-608-3410.

* DXCC processing status: The DXCC Desk has announced that the number of unprocessed applications at the end of August 1997 was 245 (33,621 QSLs). The desk received 233 applications (15,244 QSLs) for endorsements and new awards during August. This compares with 285 applications (27,725 QSLs) for July and 352 applications (26,602 QSLs) for June. Applications being sent out at the end of August were received about three weeks earlier. A few applications received prior to that time were in the process of being audited, and so had not yet been completed.

* Interior Alaska Hamfest: The Interior Alaska Hamfest, sponsored by the Arctic Amateur Radio Club, will be held September 27, 1997, at the former Liquidation Sales site, 530 Old Steese Hwy, Fairbanks, Alaska. Seller setup, 7:30-9 AM; doors open at 9 AM. The AARC annual meeting and election of directors and officers will be held at 1:30 PM. Talk in is on 146.88 (-600 kHz; 103.5 Hz CTCSS). Tables are $10. Admission is $2. The banquet will be held at Castle Restaurant, 4510 Airport Way, Fairbanks, starting with a social at 6:30 PM. For more information, contact Fred Brown, KL7CUS, 907-452-3452; e-mail fbrown@mosquitonet.com; http://fytqm.uafadm.alaska.edu/aarc/AARC.html.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Perhaps I can change the question, somewhat.

If you were given a majic wand and you could change amateur radio to
be what you would like it to be, what would it be like, technically or
whatever aspect you are thinking about.
Larry ve3fxq

Ok, let me turn the comment around, what would you consider to be high
tech in amateur radio? If you were asked for your definition of high
tech, what would it be?
Larry ve3fxq

DIVISIONAL NEWS

VK2WI'S 20 METRE BROADCAST FREQUENCY

VK2WI has been providing a broadcast channel on 20 metres since late last year. The frequency chosen was one which appeared clear at the time. The time is approaching to place a new transmitter on 20 metres and it is also the time to review the choice of frequency. This was discussed at the committee meeting last week and it was decided to try and reuse the one used by one of the other WIA broadcasts. Looking at the time intervals the best placed share would be with VK6 who radiate on two frequencies, 14.116 MHz and 14.175 MHz. of these, 14.175 is still in use by VK5 but 14.116 is clear. VK2WI commences an hour and a half before VK6. 14.116 is also the Travellers' Net frequency which is activated later in the day.

We have decided to check out this frequency - 14.116 - and if suitable we will move later in the year.

We would like comments from listeners on the proposed move. Please advise during the callbacks or write or fax the office.

--Tim Mills VK2TZM

NEW SIX METRE REPEATER

THE 6 METRE REPEATER AT DURAL WILL BE OPERATIONAL (WE THINK!) WITHIN TWO MONTHS.

OUTPUT FREQUENCY WILL BE 53.850 MHZ

INPUT FREQUENCY WILL BE 52.850 MHZ.

THERE ARE MANY PHILIPS TYPE 828/25E TRANSCEIVERS IN CIRCULATION AS A RESULT OF "TRASH AND TREASURE" SALES.

IF YOU HAVE ANY NOTES ON THE CONVERSION OF THESE
VENERABLE RIGS TO 6M OPERATION, PLEASE SEND COPIES TO THE
DURAL OFFICER AT THE W.I.A- (N.S.W.) OFFICE.

HOPEFULLY, WE CAN PUT TOGETHER A PACKAGE FOR OTHERS WHO
MAY BE INTERESTED IN GETTING THESE RIGS GOING.

--OWEN VK2AEJ, DURAL OFFICER

A REQUEST FOR INFORMATION

The Division has had a request for Service Manuals for two items of equipment. These are a Cossor Oscilloscope Model 1049, Mark 3a, and a Cossor Telecheck Marker Generator Model 1323A. The Division does not have a copy of either of these. Does anyone have one? Please contact the Divisional Office to arrange pohotocopying and return of your documents. Thank you

--Submitted by Aub Topp VK2AXT - Divisional Librarian

WICEN NEWS

There will be a de-brief of the Shahzada exercise, tentatively scheduled for 21st September, at the Rescue base in Rose St, Wyong.

Blue Mountains WICEN has been asked to provide communications for a Horse Enduro in the East Kurrajong area next Sunday. They need seven operators for the event, which will start at 5am and complete around 3pm. If you would like to participate in the event, please call the event coordinator, Neil Fallshaw VK2XNF, at home on (047) 51-6449, at work on (02) 9342-1589, or e-mail at neil_fallshaw@yes.optus.com.au.

The "Cycle Sydney 50km Bike Ride" will be held the following Sunday, on the 21st September; the contact for this event is Kevin VK2CKD. Finally, the VRA AGM will be at Randwick on the weekend of 27-28th September.

Next month looks like being quite busy. The Oberon Car Rally, run by Neil VK2XNF, is on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October; and the annual Bungonia Cave Rescue, run by Mark VK2XGK, will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX REPORT

TANZANIA - Listen out for Harald 5H/DL7VSN from Zanzibar from until 27 September. He plans to be active on 80 to 10 meters, using mostly CW. He will try some 160 meter operation if possible.

CEUTA - Frank EA5RD and Kim EA5ND are active with EA9 prefixes this weekend September 6 and 7. They are operating from Muralla Real, and can be found on 80 to 10 meters, using CW, SSB and RTTY.

WALLIS ISLAND - Marcel ON4QM will be active from September 8 until mid November. Callsign is unknown at this time. He will be active on 40 to 10 meters using SSB. He hopes to be active from Futuna Island for one week as well.

ANTARCTICA - Roman EM1KA will be active from the Ukrainian research base at Vernadsky for another year. There is the possibility of some 6 meter operation from here. He is regularly QRV on 1827 khz at 0400z.

SVALBARD - Carlos LA9PJA is active this month as JW9PJA. He will operate using CW, SSB, RTTY and PACTOR. There is also the possibility of some SSTV and satellite operation.

WESTERN KIRIBATI - Steve 3D2SJ is operating as T30NAS. His length of stay is unknown.

EASTERN KIRIBATI - Tuck KH6DFW will be QRV until Monday (8th) as T32BI.

BENIN - Sigi TY1IJ will be active until September 19 on all HF bands.

ASIATIC RUSSIA - Members of the Nadym DX Club will activate from Belyy Island, IOTA AS-083, in the Karskoe Sea, from September 8 to 18, using the special callsign R9KM. CW and SSB operations will be on 160 to 10 meters, including the newer bands. There may also be some RTTY operation.

--ARRL DX Bulletin 38, dated 4th September, 1997

DX CLUSTER IN SYDNEY

A DX CLUSTER IS NOW OPERATING IN SYDNEY ON 144.825 MHZ.

THE CALLSIGN IS VK2AAB-3.

A DX CLUSTER IS A SYSTEM THAT SENDS TO USERS REPORTS OF DX STATIONS THAT ARE REPORTED BY OTHER USERS THAT HAVE HEARD OR WORKED THE DX STATION. THE CLUSTER CAN BE USED AS THEY ARE USED OVERSEAS TO REPORT OPENNINGS ON SIX

METRES AND OTHER VHF BANDS.

OTHER FACILITIES ARE AVAILABLE SUCH AS DATABASES WHICH
SUPPLY QSL ADDRESSES OF DX STATIONS. CURRENTLY THERE ARE
TWO DATABASES ON LINE.

THE FIRST IS THE PREFIX DATABASE WHICH PROVIDES
INFORMATION ON WHICH COUNTRY HAS THE ENQUIRY PREFIX, ITS
LOCATION AND TIME DIFFERENCES.

THE SECOND DATABASE IS THE QSL DATABASE WHICH HOLDS IN
EXCESS OF 35,000 DX STATION QSL ADDRESSES. AFTER YOU
CONNECT SEND INFO AND YOU WILL RECEIVE SOME INSTRUCTIONS
ON USING THE DATABASE.

PLEASE SEND ANY ENQUIRY REGARDING THE DX CLUSTER TO
VK2AAB @ VK2WI

--Barry White VK2AA

HOPING TO SEE MANY MEMBERS AND VISITORS AT THE CLUB MEETING .

--CHEERS BRIAN VK2UBF PUBLICITY OFFICER I.A.R.S

WAVERLEY AMATEUR RADIO SOCIETY

The society is planning to organise a trip to the biggest ham gathering in the USA in 1999. This is the Hamvention at Dayton held every May.

Although it is nearly 2 years ahead, we are interested in finding out how many might like to consider joining us, whether or not members of our club.

The advantages of a group going together include savings on accommodation and fares as well as the company of fellow VKs. Cost looks to be around the $2500 mark. If you think you might like to join us, please contact Raffy Shammay, VK2RF, for further details. Raffy can be phoned on 02-9389-9188 during business hours or after hours on 02-9130-5128. You can also call him on the Paddington repeater most evenings.

A reminder that our next meeting will be on Wednesday, 17th September at 7:30 pm, so come along and see what we are up to.

Our clubhouse is next door to the Rose Bay RSL Club in Vickery Avenue, Rose Bay, off New South Head Road.

--Simon Buxton, VK2EII, President

If you know someone in the Sydney Eastern Suburbs who would like to become a Ham, The WAVERLEY AMATEUR RADIO SOCIETY will be starting a theory and regulations course for prospective amateurs. The course starts at 2pm on Saturday 20th September, 1997 at the Rose Bay clubrooms.

For further information phone Raffy VK2RF on 02 9389 9188 (work), that's 02-9389 9188, or Eric VK2KUR on 02 9735 5826 that's 02 9735 5826.

--Submitted by Raffy VK2RF and Eric VK2KUR.

band on test. We will be pleased to receive reports on its coverage.

For more information ring (02) 9837 2226 or (02) 9834 1186.

--The Publicity officer Michael VK2E

SHEPPARTON COMMSDAY '97

SHEPPARTON AND DISTRICT AMATEUR RADIO CLUB INC will hold it's
popular annual commsday on Sunday 14th of September.

This event draws radio enthusiasts from New South Wales, South
Australia and all parts of Victoria.

The venue will be The Mechanics Institute in Wyndham Street,
Shepparton, between Nixon and Fryers Sts.

The Vintage Radio Club will again arrange a display. This popular exhibit
attracts many admirers of old and restored equipment of a quality not
often seen today.

Major traders have indicated their intention to participate and we look
forward to the release of several new models to tempt both the eye and
the cheque signing hand.

A limited number of trade/swap tables will be available from $10.00,
depending on the size. Early prepaid booking is required to guarantee
your site. Please forward cheques to PO Box 692, Shepparton 3632.

Admissions charge adults $3, accompanying children free. Bottomless
tea and coffee available, doors open at 10:00 AM, traders earlier.

Talk-in will be provided by VK3SOL on VK3RGV 146.650 MHz. The
repeater is located 40 km from Shepparton so call in on the output if you

have any trouble raising it on your handheld radio in the city itself.

Shepparton is located in the heart of Victoria, 170 km north of Melbourne, at the junction of the Midland Highway and the Goulbourn Valley Highway.

Members of the Shepparton and District Amateur Radio Club look forward to seeing you on Sunday 14th September at The 1997 COMMSDAY.

For any further information please contact MaryAnn Williamson on 03 5831 5171

BROADCAST ROSTER

Next Sunday, 14th September, 1997

Morning:
Announcer: Pixie VK2KPC
Engineer: Eric VK2EFY

Evening:
Announcer: Tony VK2DJW

Engineer: Jeff VK2BYY

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au (NB new address)

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.

Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

HamTrans is to help Hams move items that are not shipable in
a cost effective manner. HamTrans is a reflector where Hams
may post upcomming travels so that they may help fellow Hams
send or receive items of Amateur nature that are to large
and/or to heavy to be affordable via a Common Carrier. A

seller or a buyer of Amateur equipment can post here in
an attempt to acquire a traveling Ham that would serve as a
Messenger for the item. HamTrans can help get Ham parcels
close to you or even to your door.

Disclaimer:

HamTrans must be a non-profit concept. Messengers are in no way
responsable for the Amateur equipment in anyway except that
they have agreed with both the shipper and the recipient to
get the Amateur Parcel from one place to another.

From ARRL Headquarters
Newington CT September 5, 1997
To all radio amateurs

SB QST ARL ARLB052
ARLB052 Hurricane Watch Net activated as Erika eyes Caribbean

The Hurricane Watch Net has been activated and is currently in standby mode on 14.325 MHz as category one hurricane Erika moves toward the Lesser Antilles. A hurricane warning is in effect from Antigua and Montserrat northwestward through St Martin. With their sections under a hurricane watch, ARRL Virgin Islands Section Manager John Ellis, NP2B, and Puerto Rico Section Manager Guillermo Schwarz, KP3S, report that preparations for possible ARES activity are under way.

At 2 PM AST/EDT, 1800 UTC, Erika's center was located near 16.9 north, 58.5 west , about 215 miles east of Antigua. On its present westward course, the storm, with sustained 75-mph winds, will be centered near the northeastern leeward islands on Saturday morning.

Amateurs are advised to monitor storm emergency net frequencies. Do not transmit unless directed to do so by net control stations. Official hurricane advisories are available from many sources including NOAA weather radio, the National Hurricane Center home page at www.nhc.noaa.gov, and the Hurricane Watch Net home page at www.weathernode.com/hwn.

ARLB051 Gate 3 grants soon

ZCZC AG51
QST de W1AW
ARRL Bulletin 51 ARLB051
From ARRL Headquarters
Newington CT September 5, 1997
To all radio amateurs

SB QST ARL ARLB051
ARLB051 Gate 3 grants soon

As more than a thousand vanity call sign applicants wait anxiously, the FCC in Gettysburg, Pennsylvania, is edging ever closer to processing Gate 3 August 6 vanity receipts.

Gate 3 opened August 6 for Advanced class amateurs. As of late August, the FCC had cleared the decks of any ''work in process'' or WIPS applications from applicants who had filed prior to August 6 under earlier vanity gates. The FCC reports it received 1613 vanity call sign applications between August 6 and August 20. That total could include applications filed under earlier vanity gates, however.

An FCC spokesperson said this week that personnel are very carefully matching up fees paid with applications filed to ensure that any call sign request that can be granted, will be granted. In particular, the FCC wants to be sure that no fees for electronic filers go astray. Most of those who are seeking new call signs under Gate 3 filed electronically, but payments still had to be sent by mail.

The fee-handling procedure initiated with Gate 3 is a change from how fees were handled under earlier vanity gates. Under the current procedure, the FCC requires fees accompanying electronically filed applications to be paid (and received by the FCC bank contractor, Mellon Bank) within 10 days of filing. The FCC will not process an application before the fee is received. The fee for a vanity call sign application increases from 30 dollar(s) to 50 dollar(s) on September 15, 1997.

The FCC still has not given any indication when it plans to open Gate 4.

I want to wire a Radio Shack Speaker Mic to my Kenwood TH-79A. The mic terminates with a red wire, a yellow wire, and a shield wire. I have some plugs (3/32" and 1/8") to connect to the radio, but I have no idea how those wires connect to the plugs. Can someone explain how to do this? Please help, this has to work!! Thank You.

First, yes Burt is pathetic. As stated, he's a sad little man, trying to justify his sad little existence.

However, I will disagree with his rather droll, excuse me troll comparison. The difference is that one faction had no control. The papparzzi chased the princess and she had no control whatsoever. Those that "risk" their lives, do so on their on volition. No one forced the 20 men to go to Heard. No one forced those to go to Easter Is, Peter I, etc etc. These were conscience efforts on the part of the participants. There was no coercion involved, no guns to heads forcing innocent men to board boats and leave their families for weeks at a time.

If the opportunity presents itself, hell yes, I'd work 'em and have. If it doesn't, my life goes on (something obviously that pisses the hell out of Fisher, who really has no life, judging from the time he spends posting his redundant bullshit)

There's a big difference between voluntary and involuntary control over what takes place in one's life. To compare a QSL card to what happen in France is typical Burtism's. Redudant blathering that offers nothing constructive.

We've seen numerous posts from technocrats claiming that amateur radio is supposed to be high-tek, and if you're not high-tek, you don't belong in amateur radio.

So, I pose this question: If you had to outfit your shack with test equipment to make "The Ultimate Test Bench", what would you buy -- and how much would you spend?

> >You are really pathetic.
>
> Perhaps, but in this case, his observation is right on target.

Well, Im sorry Glen but this would be quite a stretch for me.
Since Burt asked what the differences are, I'll point them out.

A. The photographers chasing the late Princess Diana were doing it for
money.
I don't know of many DXpeditions that were profitable, although I
know a fellow who
spent thousands of this own money to go.

B. The tabloids are paying thousands to hundreds of thousands of dollars
for photographs of celebritys. Have you ever paid a thousand dollars
for a QSL card? One hundred
dollars? Ten? I'll have to admit I've sent a dollar here and there.
Doubt that made the DX station rich though.

C. What ham has EVER asked another to risk his life and travel to a
remote location so that he may gain a QSL card? Have you ever asked
anyone to do this? Have you ever paid anyone to do this? Do
amateurs put together DXpeditions so they may profit and be able to
put food on the table or pay for thier childrens education? I doubt it.

D. Ever seen a ham chase and hound the members of his local radio club
until someone finally got on a plane for Okino Tori Shima? Yelling
all the while "please! please! just one QSL so I can retire from
this business!"
This is sounding pretty absurd isn't it?

I also doubt that the photograhers chasing celebritys are not wealthy
individuals who take pictures for fun. Just as an amateur working for
a modest wage raising a family is not going to travel by special
carrier to Bovet Island and play radio for a month.

Should we also hold National Geograhic accountable for the deaths of
those who died on Mt. Everest because they cover those who climb it?
Additionally, Burt didn't 'hear' this anywhere he made it up for it's
TROLL value,
and yes I responded.

Reagards, Tim

3705. Vanity calls and expiration date

Source record: 190939

Suppose I'm interested in a vanity callsign that has expired almost 2 years ago (it used to belong to someone who is either dead or who never renewed his/her license). Let's say that it expired on the 1st of November 1995.
I was told that you cannot ask for a call sign within the next 2 years following its expiration date.
Would I be able to get that call on the 1st or 2nd of November of this year? Has the FCC a program that retrieves expired calls and reissues them after 2 years?

Please reply via my email address at KM5R@DXer.org

No, there is no exemption for the ARRL. W1AW must follow the
same rules as any other amateur station (even though it often doesn't
and gets away with it). The law cannot play favorites. The rule allowing
code practice or bulletin transmissions applies to *all* amateur stations.

If the operator of the station is to be *paid*, however, there are special
conditions which are hard to meet unless you are W1AW. That was put
in for W1AW, but because the law cannot play favorities, it is possible
for other amateur stations to meet those requirements too (though most
other stations don't pay their operators so the point is moot).

> true.......just listen to the questions that are asked by licensed radio
> operators Dave K2IJY

You are absolutely correct. I have heard several new licensed hams ask,
"I just got my ticket, what frequencies can I operate on?"
There was a time when holding an amateur radio operators license ment
that
the person holding said license had studied and new at least basic
electronic, antenna, receiver, and transmitter theory, plus the rules.
And they most definitely knew what bands/sub-bands their license allowed
them
to operate.
Any Novice knew how to figure the length of, and build a half-wave
dipole
antenna. Today, some don't even know what a dipole is.
Thanks to the new testing requirements, a person can go from no license
to Extra and still not have a clue about any of it.
And we wonder why the amateur bands are sounding more and more like
11 meters?

OK Jeff I'll change my statement:

...High tech in 1917 but certainly not in 1997. Phone nets might have
been high tech in 1921 but certainly not in 1997. (Or 1987, or 1977, or
1967, or 1957, or 1947, or 1937, or 1927)

Can keep going and add SSTV, packet, contests, DX nets, RTTY, ad
infinitum.

Are you claiming CW and/or phone are high tech?

Dave S.

No, it is not.

> What is the difference between the photographers that chased her to
> her death and hams that want others to risk their lives in a remote
> island for a QSL card?

I doubt, it was chasing. When those guys arrive at the crash FOUR MINUTES after the accident, it just takes 3th grade math to figure, how far behind those guys actually were.... Did that ever come to your mind, what four minutes mean at 30 mph? 60 mph? 90 mph? 121 mph?

at 30, it means one mile
at 50, it means two miles
at 90, it means three miles
at 121 it means four miles

Whatever your choice -- and the wreck did not look like a 30 mph crash, more like 90 plus mph -- a distance of one mile between the chased and the chasers hardly constitutes "chasing" or "hounding" ....

Both pieces of info, Burt, are bull shampoo, the clamour for a special event station just as much as the alleged hounding ... You only have to think yourself for a moment and not have the media think for you.

> components?

Certainly can ... no problem ... *IF* you've kept up with current
technology and industry practices ... otherwise, you're a
stagnated olde farte who doesn't live up to ham radio's chartered
purpose ...

> How are you at programming that embedded uP?

Pick a language ... assembler (various flavors), C, C++, Pascal,
FORTRAN, various versions of BASIC, LIMBO, JAVA ... what's your
preference? If you're not at least familiar with and modestly
proficient in at least one of the above, you've obviously been hiding
from technology under some rock for the past 20 years or so ...

> Don't forget the quadruple-layer circuit boards,

Double-sided is most economical, of course, but 4 layer makes
routing easier and allows power and ground planes ... one can also
use microstrip or embedded stripline constructs ... are we talking SMT
components on *both* sides of the PCB? (no problem, just curious)
However, if you want the ultimate in density and miniaturization, you
will want to go to more layers (I've personally done up to 12 (routing) layer
boards on occasion) ... perhaps with blind vias ... if you don't have a
clue what a "blind via" is, you're been under the rock with the guy who
can't program, right?

>and proprietary software source code.

Understanding someone else's code is (almost) always harder
than understanding your own, but if the person has used modern
structured programming techniques (even in <gag> BASIC)
and has commented his code well, it shouldn't present an
insurmountable problem ... assuming of course that the person
trying to read the other person's code knows the difference
between a case statement and a do...until loop ....

> Feeling pretty sick, huh?

Only when I am forced to realize how pitifully few hams CAN handle
the trivially simple things that you propose and some of us take for
granted as "an essential part of meeting ham radio's charter goals"

(not to mention being LOTs of fun ...)

> OK, then let's build a really OLD radio from one of the dusty old ARRL
> handbooks.

Why the hell would anyone want to do that??? Most of us have far better
things to do with our time than build obsolete junk ...
Seen any good transmitting toob sockets these days? How

> Now, how about the neighbors that used to respect the ham operator in
> the 60s, but now take hams to court over an antenna nuisance
> ordinance. HA! HA! HA!

The major problem WRT antennas is that developers have, for several decades,
virtually universally encumbered new housing with restrictive "CC&Rs" against
outside antennae, etc. ... and they have convinced "the public" and many local
governments that this is "a good thing" ... this is something that some good
old-fashioned Federal preemption (with some teeth in it) could bust in short
order ... but why bother if hams are becoming increasingly obsolescent??? It's
up to US to revitalize our service to the point where the Feds and local
governments
once again consider us a major asset, rather than a bunch of useless hobbyist
who create "eyesores" and TVI problems ...

The way to do that it to return to the leading edges of technical advancement,
field the redundant, robust, survivable communications systems that can be
of real value to emergency agencies, and stop whining "it's JUST a HOBBY"
and start living up to the obligations that go along with our spectrum
allocations.

Teach about radio to a bunch of kids - like Scouts.

Morse Code is easy for them to learn, and they
seem to enjoy learning it - it's a "CODE!"

The ones who complain about having to learn Morse
are the adults.

The written exams are tough for kids, but easier for
adults.

If half as much energy was spent simply learning
versus complaining about having to learn, life
would be far less painful, and filled with
greater successes.

If the hoop is there, and you want what's on the
other side,

JUMP!

As has been said MANY times, "communication is now
a commodity," due to the Internet, cell phones,
PCS, etc.

If you are unwilling to work like a dog for what
ham radio can give you, you can probably find
whatever you're looking for elsewhere anyway.

A CB makes a dandy CB radio.
A cell phone makes a great cell phone.
A pager makes a superb pager. You can receive messages
just about anywhere in the world!
A computer can hook to Iphone and the web, giving
you RELIABLE International communications.

Ham radio is far less, yet far more. It is some
of all of the above, plus lots of things the above
are not. Are you willing to <<WORK>> for it?

Carl, I'm still waiting to receive the $5000 surface-mount SMD Rework
station you were buying for me for my birthday!

Sorry, but not all of us can AFFORD the equipment. INDUSTRY has
MONEY, while WE as INDIVIDUALS do not. That's why there's
INDUSTRY.

It has taken 12 years, and now I have:

Oscilloscope (Tek 454)
A general coverage receiver
Two freq. counters (up to 1.5 GHz)
A handful of wattmeters
DVM with capacitance, hfe, etc.

Y'know, I'm just dyin' for someone to find me a super deal on
the SERVICE MONITOR I wanted, but DAMN if I can't get one.

Oh yeah, I spent that money on a CAR.

I could REALLY use some modern, leading-edge test equipment, but
am I'm gonna dump $25k into it? No! If it were my
BUSINESS that required it, yeah. For now, I'll just borrow
other folks' stuff - and they seem to have no problem letting me.

P.S. If anyone has a new service monitor they're selling cheap,
I'm looking for one.

OK I'll buy your theory, the FCC is to blame. Seems they could correct
their wrongs very easily by doing away with the amateur frequency
allocations. Is that OK by you? After all everybody up to and including
extra class doesn't know any electronics anyway. If so I will give them
a call. Come to think of it, that would fix a multitude of problems.
Didn't notice that you offered any solutions so I guess anybody can step
in and make suggestions.

Does the FCC write the study books? Does the FCC provide the training or
is it some local club or national organization teaching how to pass the
test? Does the FCC test cover freq. allocations? (Psssst, the answer is
yes.)

Honored to know you as I take it you have never asked a "dumb" question.
That makes you about the only person in the world not to have done so.

I'm a pilot. What say we get you up alone and then complain how the
world has gone to hell in a hand basket because there is some "new pilot"
on the radio asking how to land an airplane. We will shut the radios off
and just sit around complaining how the FAA has made a mess of
everything. Or better yet, belittle you over the radio because you are
asking such a dumb question then turn off the radios. Yes indeed, "I
wonder how long can this continue to go on".....if you are an
experienced pilot you will be OK. If not..... ooooops.

OBTY Not everybody in the "free world" has the ability to listen to free
speech.

Larry who do you think is designing Kenwood, Yeasu and Icom which probably represent 90% of the world market? A Ham in North America? (No bashing implied or intended) Most electronics is computer designed now days and I would doubt the percentage of Hams in electronic design is much, if any, higher than any other discipline. Most "high tech" in new radios today is marketing hype to get people to buy the latest and

greatest.

Again, a few fancy parts and pieces to perform a 70 year old technology is not high tech. Packet.....even in the mid 80s was not close to leading edge.

You're still talking legalities. We don't need the FCC to tell us what interference is, nor do we need the FCC to tell us what intentional means. Deliberately throwing a signal on top of another so that the other cannot continue to communicate is intentional interference. It may not be *illegal* in some cases according to the FCC, but it is still intentional interference. The military has a name for it, they call it jamming. As you're fond of saying in another context, amateur radio is not the military. The Maniac is saying jamming is a bad amateur practice. I tend to agree, regardless of who is being jammed. The result is a hunk of spectrum unusable by *anyone*, amateur or not, and that is an unqualified bad thing in the amateur service.

In some cases, yes. When the intent is to overpower other stations
so that they cannot continue to communicate, it is intentional
interference. Some Dxers call this "dominating the frequency",
but I call it jamming.

Gary I agree that intentional interferance may not be appropriate, I think the reason were divided is the way it's being defined. After reading you post I get the feeling talking OVER or sending CW OVER an illegal station operating on 10m is not appropriate.

You say jamming is a bad practice regardless of who is being jammed. Im surprized at this remark. Since you've chosen to leave all the legal issues aside I will propose:

If I decide to have a conversation on my HT, out of band, on 154 MHz on the output of the local police repeater, they hear me and decide to talk OVER me they are causing intentional interferance to me? Would it not be appropriate for them to continue talking? Im sorry but I see no difference in the senario we've been talking about, (all the legal issues set aside) If your not licensed to be there you shouldn't be surprized if someone decides to use YOUR frequency to tune up on instead of one occupied by two leagal stations.

Newsline says that AZDEN will keep it's USA facilities and continue to
manufacture other RF parts, etc. but the ham market has dried up for
them and they are calling it quits for ham radios only. (i.e. Azden
parts will still be readily available if your radio has a siezure) I
think Amateur Electronic Supply is the company that bought all their ham
inventory and will be liquidating it. So look for some possibly good
deals on AZDEN radios in the future. I agree, I hate to see this happen.

hmmm. The average ham is an old guy who uses an expensive radio from Japan to talk to other old guys about his expensive radio from Japan. When the expensive radio from Japan stops working, he packs it up and ships it to the expensive radio from Japan repair depot. He does this because he has no idea how the expensive radio from Japan works.

Yes, I know that all hams are not like that.
Yes, I know there are a lot of knowlegable hams out there.
Yes, I know they are not all old guys.
Yes, I know there are a lot of women out there too.
Yes, not all radios come from Japan.

This message is not a troll, I'm not looking for ANY replies, or messages "In Defense of Amateur Radio". I don't need to be told how wrong I am. This is just the impression I have of ham radio.

This message is about what can we do to change the image of ham radio, and what new directions can we take to attract the young.

I think the question I am asking is:

What can ham radio offer young people that they can't get from the Internet?

In Jim's case she would look down and say QRP?
And he would say QSL

I am looking for someone who can tell me if it is true that the V7A can automatically change frequency when keyed by a TNC hooked to the digital port and then automatically come back to the originally voice frequency when the TNC is through doing its thing.

I am considering purchasing one of these redios and would also appreciate any overall reactions anyone has to the radio.

Thanx

Doug, KM4HY

3742. HELP! Antenna info needed!

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-06 00:00:00 UTC
From: bocks@erols.com
Message-ID: <34118134.1BB7@erols.com>
Source record: 190865

I just received a Cushcraft antenna from AES (factory-sealed carton) and the instructions are missing. Although I have e-mailed both AES and Cushcraft, it is a weekend so I don't expect any response until Monday.

Can someone e-mail me the following data for assembly of the Cushcraft A430-11S yagi?

a) Element installation sequence from back (reflector end) to front, by length of element;

b) Correct dimensions for adjustment and clamping of the Reddi-Match for use on the *low* end of the band (i.e., 432-434 MHz).

I'd use my Bird for b) except that the correct slug is still "in the mail," HI!

Any assistance so I can get this thing together and run a preliminary test this weekend will be appreciated.

73,

Paul, K4MSG

Way back, mid 60's, when I got my amateur radio licence, I was
informed, via form letter, which listed the radio regulations, that it
is 'illegal' to 'listen in' or 'tell someones else' about a
transmission that was 'not intended for general listenning'.

While there are differences on a monetary scale, look at the way hams operate on the air as compared to the photographers who chased Princess Diana. Don't they pursue that rare DX station in the same way as photographers pursue a celebrity? To photographers, the only thing that mattered was the money. To DXers, the only thing that mattered is getting that little postcard-sized piece of wallpaper. How many hams will clamor to get that wallpaper from a special

event station honoring Princess Diana? Although the motives are different, the drive to get something is the same. One satisfies the bank account by selling photos, the other satisfies personal egos.

Dan,
You are correct. It was illegal to even listen to cellular before the
federal ban on new manufacture/import of scanners that had
cellular coverage.

The ban on listening is part the the ECPA
(Electronic Comminications Privacy Act about 6
years ago) which was further
enhanced to also cover cordless a year or so back.

The manufacture/import restriction against cellular capable
scanners cam about as federal legislation within an FCC
funding bill. The legislation mandated FCC regulations to
stop the import/manufacture of new cellular capable scanners.
That was about 1994.

>Internet?

Nothing. Amateur Radio has been rendered passe by other technonology,
the same way the printed newspaper is being rendered passe by electronic
media.

There is nothing you can do to save it. So, instead, get on the air,
make some contacts, and enjoy yourself while we still have the frequencies.

As stated before, pick the time pick the frequency and make sure that
it's enough advance notice to be there. If I have nothing better to do,
I'll be there. Chances are, anything I have to do is much better than
wasting time talking to the likes of you, so I really wouldn't hold my
breath

Better yet, why not pay me 25 cents per mile plus expenses to say that to
your face. I believe that's the going rate (based on your rate card)

"We've seen numerous posts from technocrats claiming that amateur radio is supposed to be high-tek, and if you're not high-tek, you don't belong in amateur radio.

"So, I pose this question: If you had to outfit your shack with test equipment to make "The Ultimate Test Bench", what would you buy -- and how much would you spend?"

First of all, a *good* digital multimeter, one that can be calibrated every so often by a qualified facility.

Then a frequency counter that will count higher than the top of the highest band I use. This has to have a very stable time base so that it can also be calibrated and would hold its calibration long enough to be useful.

Next, a good wattmeter/SWR bridge and a dummy load (large enough for my biggest transmitter) to allow both transmitter and antenna testing, again with good accuracy.

A dip meter, scope and RF and AF signal generators (in that order) are optional but not quite essential. If I were into major transmitter homebrewing I'd probably want a spectrum analyzer to make sure I didn't have any spurs.

> DXers, the only thing that mattered is getting that little postcard-sized piece
> of wallpaper.

The difference is the DX'ers are being invited to go after the DX
station. Example Heard Island. Everything was done to make as many
contacts as possible. The purpose that a DX station goes on the air and
calls CQ is to make contacts. How you and Fisher can compare this to
Diana's death is beyond comprehension. Oh yes, excuse me, troll central
is working over time.

>> event station honoring Princess Diana? Although the motives are
different, the
> drive to get something is the same. One satisfies the bank account by selling

Funny, only Fisher in his tiny little mind and living in his tiny living
world has suggested that there even will be a special event. I would
suggest if you appears, everyone point the antenna and attention to Cape
Cod as Fisher himself would be the only one dumb enough to try and pull
it off. well...maybe Tom aka Fisher clone

>

Nahh, I can't subscribe to this Tom, were forgetting one BIG BIG
difference, Amateurs don't pack up tons of supplies, radios, etc.
Reschedule vacations and spend thousands to go off to a rare uninhabated
island to look at the birds. They EXPECT and WANT people to call them,
the pile up is a part of the game and the fun. If I spent the money on a
DX pedition I'd be very dissapointed if I didn't have a pile up. There
is a difference between INVITING someone to join you and RUNNING away
wouldn't you say?

Hams chasing after rare QSL's is a game. Some choose to play some don't.
But when does a DX pedition NOT want hams to call them? It's a game. I
have sat in many CW pileups and chased the station around, calling on
the last callers freq, tail ending, calling 3KC's above everone else,
etc. It's a game and I was having fun. I had no need to satisfy any
personal ego. You make it sound as though someone who chases after new
countrys is only trying to satisfy a personal ego. If thats true, why
compete, why upgrade, why do anything?

This is a far cry from hounding someone who DOES NOT WANT to talk to you
or have you photograph them. Trespasing on private property, stalking,
impersonating, and the like. This is NO GAME at all as we have seen with
the death of Princess Diana. I just cant imagine how someone could find
any comparison between the papparazzi and chasing DX, seems very strange
to me anyone would even try to compare the two, then I remembered the
source.

I'm convinced that ham radio is not yet doomed. In fact, the
number of knowledgeable hams is about the same as it was
a few decades earlier. The big difference is that now in
addition to these knowledgeable hams we have lots and lots
of "pseudo-hams" which fit your description! And unfortunately,
we NEED them simply because in these times when NUMBERS count,
we could not retain our bands if it weren't for the reasonably
big number of users...

So, lets keep those millions of appliance operators, so we can
retain our bands for the good use of the few ones who still
do real radio. That means, drop the CW requirement too, so we
can get a few million more people to replace the old and dying
old men...

Hi everybody,
I've designed a new 9600 bps modem with asynchronous serial interface.

For those who are interested in testing here are some of its features:

- True UART interface (no TNC required),
- Built-in asynchronous to HDLC frames protocol converter,
- Low host computer overhead (WinXX without TNC possible),
- No external power-supply required,
- Internal crystal controlled clock generation/recovery,
- High precision RX clock recovery (1/256 bit),
- High performance hardware carrier detection,
- GMSK or Cosine NLF modulation,
- Higher speed possible (with WBFM radios),
- 3 ICs implementation (Xc5202 FPGA, CD4050 Buffer, TL084 Op-Amp),
- Low cost (maybe much less than 30 USD),
- public domain (postcard-ware).

Driver developers wanted!

>Could this be true??

Possibly. Here in NF you have to be the registered owner of the vehicle having the plates put on in order to get them. Since you would not be the registered owner as a lessee, it is most likely that you can't get them.

3775. HELP! HELP! My FT-51R

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-06 00:00:00 UTC
From: trex2000@txdirect.net
Message-ID: <3413d24b.2165668@news.txdirect.net>
Source record: 190898

I recently attempted the "Mother of Mods" on my FT-51R. The mod appeared to work, but my ADMS-1 software would not. The software took a template fine, but gave me the error message (on HT screen) when I attempted to reload. Not being very satisfied with the reception with the hardware mod, I "undid" the mod. I then tried again to reload my freqs to the HT. Again I got an error message. I then manually entered my freqs, took a template via software, and found that the software had uploaded my freqs O.K., but did not include the tones I had entered. Transmission on the HT enabled me to discover that for some reason I had changed the radio into "Euro-Mode". Then, after doing the CPU reset (vfo+mr+2), I really found out I was in the "Euro-Mode". How do I get my HT out of "Euro" and into "USA"? Could my using the ADMS-1 (No version given, but copywrite ©95, SN 07950321) have caused these problems? Could my use of WIN95 have changed my software output or compatibility? (I did use both newer and older versions of CTL3DV2.DLL). My jumpers are set at original, not MARS/CAP, that is, JP 1,4, and 7 are closed. Can someone please help? Thanks in advance, Scott (KB5YOK)

Things vary considerably from state to state. When I moved to Oregon I
added
my 12 year old to the registration of one car (along with my wife and
me) so we
could get one more ham plate - the other two cars already had my wife's
and my calls.

> > I have a Kenwood TH-79A and it gets hot

In addition to the other useful responses here, may I add this:

If the HT gets hot, it could also indicate a poor antenna
match. Borrow or buy a cheap SWR meter and verify that
you are getting a 1.5:1 or better match. If it's higher,
you may be dissipating your power inside the radio, instead
of radiating it to the world.

Hi!!

Help me please!!

I have a ts-440 kenwood, is not work is broken, no sound ear from the receive, just in FM i ear.. but for they other band... no sound, is not the squelch or any swich!!

ANY suggestion??

THanks in advance for your response

73 to you

And you are exactly the type of person that the no code license was designed for. That, to me, is one of the two reasons the no code license is good. Either it is a stepping stone to getting your full HF priviledges, or it is the only license you want and need. (Plus you are able to volunteer time in an emergency for communications, if you desire. The no code license opened a lot of doors for emergency communications everywhere.)
Good luck with packet, I may dabble in that sometime soon, just gotta get the time :)

The IC-820 will not tune below 136 MHz when opened for wide receive.
Ask ICOM for the information to modify the receiver.

>
>10m beacons.

Right, I know about the beacons, but I still need to leave the rig tuned to 10 M to hear them. There are the propagation charts like those published in QST, but they only give overall likelihoods for the month, and real-time charts, which again you have to be looking at when the band opening occurs. I'd like to be using the rig for CW on 40 and somehow be alerted that 10 is now open, or know in advance that it was very likely to be open at a certain time on a certain day.

I was thinking of a something like a propagation prediction service that would send me an email every day with a message like "For the next three days there is a high likelihood of 10 M band openings from the midwest to South America, peaking at 2000 UTC". Maybe it just isn't possible to make predictions that are that accurate.

The other thought I had was to make a little box with an MC3371 FM receiver IC tuned to the 10M beacons on 28.200 and just use the signal strength out to a LED driver: when 10 M is open, the LED goes on. It would only be on while that beacons was transmitting though and the beacons don't seem entirely reliable as an general indication of 10 M being open anywhere, because it could be open to somewhere where there is no beacon. I'd also probably have to have a separate antenna for the box. I don't know if a telescoping one like on a scanner would be good enough.

I imagine it would be illegal to make my own MUF meter (send a pulse at a given frequency straight up, listen to see if it comes back down). Maybe the club could have one that gives out the MUF with the station ID on the 2 M repeater. Or maybe I should just quit procrastinating and pass that 13 wpm!

Additionally, there is a product I sell called Chip Quick, you spread it
over the pins of the chip and it changes the melting point of the solder
down to about 180 F you can melt the solder by applying a heat gun to
the opposite side and the chip slides off.

Amazing stuff... the copper traces are left virgin, you pool the solder
to the center using a q-tip then evacuate it.

SB DX @ WW $OPDX.321
Ohio/Penn DX Bulletin No. 321

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 321
BID: $OPDX.321
September 8, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA1S, N2AU, WB2YQH & WB2RAJ The 59(9) DXReport, W3UR & The Daily DX, K4MZU, K4PC, W4WX, K7ON, K7BV, K8XP, AH0W/OH2LVG, DL7IO, EA3ELM, EA4DX, G3USF, G4BUE & DX News Sheet, OZ1LQH, T93Y and VK3EW for the following DX information.

3D2, FIJI. Ron, ZL1AMO, is once again active from here as 3D2RW. His length of stay is unknown and he can usually be found on CW (but he does work some SSB). Look for activity on all bands, especially the WARC bands. QSL via CBA.

6 METERS NEWS. Good news for 6 meters OPs. The DXNS reports that Omar, YK1AO, from Syria, has received permission to operate on 6 meters (50-54 MHz). The bad news is that he plans to be active on 6 meters in early 1998.

8Q, MALDIVES. Roberto, EA4DX, will be active as 8Q7XX from September 9-21st. Activity will be only SSB on 80-10 meters. Special atention will be paid to 17 and 12 meters. QSL via callbook address to EA4DX.

8R, GUYANA. The "DX News Sheet" reports that Tere (YL op and ex-XE1ASF and YJ8AS) will be active for the next two years as 8R1ASF. Her activity will be on 40-10 meters, including the WARC bands. QSL via XE1MD.

9K, KUWAIT. Edin, T97M, has received an invitation from Abdullah, 9K2GS, to visit him and operate during CQWW CW Contest (November 29-30th). His activity should begin one week earlier and activity is planned on all HF bands. The callsign used during that period will be 9K2/T97M. During the contest Edin will work Single Operator 14 MHz as 9K2GS.

C6, BAHAMAS. Jon, EA2KL, and Lluis, EA3ELM, members of LYNX DX Group, will be active from Abaco (IOTA NA-080), from November 1-8th, as EA2KL/C6A and EA3ELM/C6A. Their operations will be on CW/SSB on all bands (including 12 and 17 meters). QSL via their home callsigns.

CIA SPECIAL EVENT STATION. To commemorate the 50th anniversary of the U.S. Central Intelligence Agency (CIA), a special event station with the callign NN50CIA will be active during the entire month of September from CIA facilities in Northern Virginia. Suggested frequencies are: CW - 3550, 7050, 14050, and 21050 kHz; and on SSB - 3850, 7250, 14250, and 21350 kHz. QSL to KB4EFP (SASE please).

ER, MOLDOVA (UPDATE). Chris, K4PC, reports the callsign ER0PC has been issued to him by the PTT in Kishinev to operate in ER later this month. With the help of Sergei, ER1AN, the PTT processed all the paperwork and the license. Chris leaves on September 27th and will be in Moldova for 2 weeks helping with missions work in children's orphanages. He will then return on October 12th. Since the purpose of the trip is to do the work required in the orphanages, Chris is not sure how much spare time he will have to operate. Sergei has asked some of the ER hams if he can operate from their homes which will be OK. Chris states he would like to operate on 40-160 meters on RTTY, CW and SSB since ER is needed on the low bands. There is also a chance to operate on satellite. QSL via K4PC, Chris Penick PO Box 1926 Boone, NC 28607.

FR, REUNION ISLAND. Yas, JA8NFV, will be on air from here September 16-20th. Activity will be all bands SSB/CW. He plans to work the Low bands as well. There was no mention of callsign. QSL to his homecall.

HF BEACON NETWORK UPDATE. Martin Harrison, G3USF, the IARU HF Beacon Coordinator, states the ZL6B beacon is now operational in the NCDXF/IBP worldwide network on 14100, 18110, 21150, 24930 and 28200 kHz. The beacon is located near Masterton, New Zealand and runs 100 watts stepping down to 100mw. Meanwhile, the 5Z4B beacon is once more operational on the same frequencies, but the 4X6TU beacon still remains off the air with transmitter problems. Currently 16 of the planned 18 beacons in the worldwide network are now in place.

HS, THAILAND. "The 59(9) DXReport" informed OPDX that Francois, TK5AE, will be active until September 22nd as either HS0/TK5AE or HS0AC. His operations will be on 80-15 meters CW/SSB.

KC4, ANTARCTICA. Bob, K4MZU, reports that Jaime at KC4AAC states he will be leaving on or about October 6th. Jaime said he will look for Europe starting at 1830z to 1930z Sat/Sun on 14270 kHz each weekend through to early October. Meanwhile, the "DXNS" reports that Roman, EM1KA, will be active from the Ukrainian research base at Vernadsky for another year. His activity includes 6 meters, and he is regularly on 160 meters at 0400z on 1827 kHz. QSL via JA2JPA.

KG4, GUANTANAMO BAY. KG4GC will be a multi-single entry in the CQ/DX RTTY Contest September 27-28th. Operators will be: Bill/KG4GC [W4WX], Wayne/KG4WD [KD4OHH], Rusty/KG4AU [WV3N], Ken/KG4MN [WV3R] and Cory/KG4CM [N1WON]. QSL via bureau or SASE to: Bill Gallier, 4094 Sandy Run Drive East, Middleburg, FL 32068. Guest operators will be active September 29 to October 3rd on all bands and modes.

KH7K, KURE ISLAND (Update). With only a few weeks away for this DXpedition to take place, Frank Smith, AH0W/OH2LVG, from the Midway-Kure DX Foundation (MKDXF), provided OPDX with the follow update. The following operators will be active from Kure Island September 26th through October 4th:

UA3AB - Andy Chesnokov SM0AGD - Erik Sjolund
KH7U - Kimo Chun W0MY (ex W0RLX) - Burt Myers
JA3IG - Yuhi Yoshitani N9NW - Michael Goode
K0EU - Randy Martin AH0W/OH2LVG - Frank Smith

The DXpedition will be an all band all mode effort with plans to operate four HF stations continuously. They will also be equipped with two antennas for each band including a number of Force-12 antennas for each band in addition to antennas by Cushcraft and Titanex. As with their Midway operation of last year, they will be placing much emphasis on working DXers in difficult propagation areas, especially Europe and Africa, yet with the increased number of stations, antennas and operators they expect to be able to fulfill band and mode needs from all areas. Also, there will be three support "pilot" stations assisting the MKDXF team: Wayne, AL0E (ex WB6EQX), Terry, W7KW and Bob, KE7LZ. QSL Manager will be Bob Johnson, KE7LZ, 5627 West Hearn Road, Glendale, Arizona 83306. Additional information can be obtained via AH0W/OH2LVG at the E-mail address of: ah0w@primenet.com

QSL INFO AND NEWS.....
Art, N2AU (QSL Manager of ZD7HI), would like to remind everyone again that if you worked ZD7HI on CW, do not bother to QSL the QSO. Save your card and greenstamp. This was the work of a PIRATE. Chris does not work CW. In the past month he has received 50-60 cards.

Frank, IK0XBX, reports he is the QSL Manager of following stations: IQ0A, TK/IK0XBX (EU-100), IH9/IK0XBX (AF-018), EI/IK0XBX (EU-115), and EJ/IK0XBX (EU-121). QSL via the bureau or direct to:
Fucelli Francesco, Str. S.Lucia 38, 06125 Perugia, Italy

SO, WOLIN ISLAND (Poland). NODXA member Holger, DL7IO, and other German operators will operate as SO5OE/1 from this Polish island located in the Baltic Sea Coast West Group (IOTA EU-132). Activity will start around 2000z on October 3rd and last until October 6th. There will be two stations active on all bands. QSL via DL7VRO.

TF, ICELAND. Petr, OK1CZ, will be active from Iceland as TF/OK1CZ/P with various area prefixes from September 13-19th. He will be active with an IC-706 and a windom antenna. He hopes to activate Vestmann Island (IOTA EU-071) for a couple of nights.

VK9W, WILLIS ISLAND (Update provided by Ann, WA1S). The team of 10 operators will depart Cairns on September 9th to head to Willis Island. They expect to get the first staion on the air sometime on September 11th and plan to be active for 11 to 12 days. Operators include 3 YLs (Ann/WA1S, Elvira/IV3FSG, and Noriko/7K3EOP) and 7 OMs (Bob/VK4MR, Vlad/VK2AEA, Bill/VK4FW, Darryl/AF7O, Eric/FK8GM, Bill/K6KM, and Doung/VE5RA). The callsigns will be VK9WY for the YLs and VK9WM for the

OMs. After Willis Island, they will depart for Holmes Reef where they will spend approximately 30 hours (New, IOTA OC-???). The callsigns for Holmes Reef and Maritime mobile will be VK4YN and VK4YN/mm. QSL via VK4FW. More information can be found on the Oceania DX Group's (ODXG) WEB site: http://www.odxg.com/odxgwillis95.html

WEBSITE FOR DXERS/CONTESTERS. Dennis, K7BV, Editor of the National Contest Journal, reports the magazine now has a WEB Site. Dennis states the site keeps current with information regarding DXpeditions for contests coming up in the near and far future. The NCJ website can be found at: http://www.waterw.com/~ncj/xpedit.htm

ZA, ALBANIA. "The 59(9) DXReport" states that Mike, K5KWG, is active as ZA1MH from a remote village. His activity will be on 160-2 meters, CW, SSB and RTTY. He is a missionary setting up radio communications. QSL via Z32KV.

ZD7, ST. HELENA. Johnny, ZD7WRG, is now active on CW/SSB and has been heard operating RTTY on 20 meters (on 14084 kHz). Most of his activity seems to take place between 1830 and 2200z. Check 20 and 15 meters. QSL via WA2JUN. Desmond, ZD7DP, is also active on RTTY on 20 meters. Check on 14089 kHz between 2020 and 2200z. Also, look for ZD7BG to be occasionally active on 40-15 meter CW.

ZK1, PENRHYN ISLAND (North Cook). The Dateline DX Association is in the final stages of its preparation to activate the island of Penrhyn during the period of September 20 through 27th. OPDX InterNet Subscribers will receive an additional bulletin containing the latest press release.

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX Bulletin) take note, the area code has change as of August 16th. The new 440 area code will replace the 216 area code. Currently both area codes can be used, but the 216 area code will be permanently replaced in April 1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

If you want to use it, DO!

If it has no interest to you, DON'T.

It should not be a requirement any more than it should be a requirement that you know the 3 petal/spark advance system of a Model T to get a current drivers license.

Big question, why are Generals, Advanced, and Extras bitching about "no-code" on the voice frequencies???? Can't they do that with CW amoung themselves????

You might consider it that. But in many states, amateur plates are not considered "vanity plates" and are administered under a different program. I have amateur plate for their novelty and so that hams that know me will recognize my vehicle.

If I wanted everyone to know I was a ham I would go to the grocery store and everywhere else with an HT on my belt, a speaker mic draped across my chest like some kind of honor guard sash, and a J-pole sticking up from a hardhat on my head (the hard hat would have my call on it, of course).

> > within seconds, know your address and that you are not now at home?

> Within seconds????
> Do you have access to the state's computer system to get the owner
> information that quickly???

Got a laptop? With a access to a callsign database like QRZ's CD you can figure out how long it will take to get "owner information" on someone with a call sign on their car.

And I have done it. I'll be chatting with friends on the radio and come across a car on the freeway with a callsign plate. I'll say something like "KD6ELA? Hmmmm.. wonder who that is?" Never seems to fail that someone on the system will have their computer on and spit out a name and city for that call.

> fee will be charged, but tag (or license) information is PUBLIC RECORD.

NOT TRUE. In California someone can walk into the DMV and ask for the owner's name. But DMV will not give the home or mailing address for

any car tag or driver license to anybody but law enforcement without written permission.

I have been through this myself. I needed to have papers served on somebody and went to the DMV with thier driver license number and plate number so I could get their current address. I got their name (already knew that) and what kind of car they had, but no address. I had to fill out a form which was sent to the person in question asking for their permission. They have 10 days (if I recall correctly) to deny permission or the DMV will then give it out.

It's public record - but not available to the public on demand here.

> are significant to you. I will differ with your point of view, though!

They could be significant to you too. Have you ever been burglarized? When someone sees your car, is your home address any of their business. This is kind of like putting your name and address on your key chain - you lose you keys and anybody that finds them will know what locks they will open.

I have taken certain safeguards myself. My licensing information with the FCC and FAA contains my office mailing address, a post office box. I didn't get my amateur plates until the FCC allowed us to use a mailing address only on the 610 form - and subsequently only my mailing address shows in the callbooks/databases as well.

I don't know that the FCC keeps their rules at their web site.

However I can tell you that in the US you can't do what you are describing. Asssuming that when you say "27 MHz" you mean Citizens Band.

Only a properly type accepted transmitter can be used in the C.B. service in teh U.S. A transmitter that operates on amateur frequecnies would never get an FCC type acceptance for use on C.B. In addition modifying or altering a type accpeted C.B. transmitter will void the acceptance and make it's use illegal.

This is generally covered in the FCC rules part 95.409, 95.424, and 95.425.

3802. NJ Area Hamfest Tax Collectors

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-07 00:00:00 UTC
From: W2CE <W2CE@prodigy.net>
Message-ID: <3413320D.59D2@prodigy.net>

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.swap

I have heard recently that 2 men have been attending NJ Hamfests
claiming to be State Tax Agents. Several aspects of this operation
indicate that this may be a hoax.

I would urge all hamfest sponsors to contact the State Police immeiately
upon eeing these people arrive. If they are truely State employees they
will have no trouble meeting the police.

More likely they will run and you will need to record a license plate
number for the poice to trace.

Why do they seem suspicous ? Because they are asking to be paid your
sales tax in advance on merchandise you have not yet sold and they are
providing you with their own estimate of its value and tax. They tell
sellers to apply for a refund of what they have not sold.

> media.

I cant agree with this. Newsprint offers a certain ambiance, it can act
as a form of isolation or to keep people away. By reading a publication
on print you can take it anywhere, no cords, no expensive equipment.
Until electronic media passes this availability at low, 50 cents, costs,
then the papers will always survive.

The same is for ham radio. There isn't really the same availability for a
specialized area that can allow for direct communication at such a low
price. For me to go into my tech-shack, and close the door while I talk
to others wiith privacy, isn't available. On a pc, you'd need to buy the
pc, buy software for the pc, buy the equipment for the pc, then buy time
to use your equipment, phone equipment, and then spend hours trying to
find others that decided to follow the same techno-path. The radio offers
more selection, better quality in communication, and better gratification
for less. IMHO ham radio just needs a little publicity. With a little
support from elmers, the bands will be full of all ages. I'm young
enough to think myself as a big kid, why not open it up for young kids to
get into. Take them to a local club for some classes and watch their eyes
light up!

Cheers!
Neil

The point everyone is missing is that average everyday joe smoe dose not
know that the KF2TI on my license is a ham call sign. Unlike New Yor and
a few other states that say "AMATEUR RADIO", my plates look like everyone
else. Unless you're another ham, you have no idea what it means.
Besides, what person actually goes around with a laptop and QRZ CDrom
looking specifically looking for radio callplates.

For that matter, what prevents a non ham from reading these newsgroups
and knowing that Carl or Bill or Gary or even me work, pay us a little
visit while we're out??
```

Better yet, the really smart operators who broadcast their vacation itinerary over the air, all the time ID'ing every 10 minutes. Now there's a boozie if you ask me

You can always tell when Burt's Prozac prescription runs out - he gets out
the computer and starts trolling. Gets him a quick "fix".

Now go drink your vallium-flavored punch, Burt.....

Are you the QSL manager for the special event station?

KB8EE's 10 Minute ID'er. A software id'er written for Windows 95/NT only.
This program will not work in Windows 3.1!

The id'er allows you to display text of your choice in a window that also
displays the current time of day in am/pm, gmt, military(24 hr) or zulu.
The window also displays the time remaining until ID time. If the form is
minimized the time remaining is displayed on the task bar.

The current time, and ID times can be announced through your sound card
if you so desire.

Try it for free.

>applied,
>can be a force in teaching people technical skills and getting people
>interested
>in technical fields so that there are workers to build things here again
>instead
>of having all those jobs go overseas ...

(I could make a comment about how all these techno-geniuses might be able
to build all kinds of nifty stuff, but they lack the common sense to figure
out where the 80-column mark is on their terminal... but I won't....)

Many people today get involved in computers. This leads to a variety of
job paths -- programming, systems engineering, firmware engineering,
maintenance, tech, management -- the list is virtually endless. Heck, I
knew kids in college who were building their own circuit boards to do
things with the old IBM 8-bit ISA bus.

Amateur radio will never be able to compete with this type of environment.
Computers are too ingrained into the fabric of our society today. When
people decide to get involved in "high-tek", they're going to get involved
more with the computer sitting in the family's den. (1/3rd of all
American households have a personal computer.)

>The Japanese are not "working for peanuts" ... they're "working SMARTER" ...
>it's time we turned the tide and ham radio *could* be a very noticeable factor.

You're deluding yourself if you think amateur radio will ever amount to
anything more than a pasttime. At one point amateur radio was hot -- it was
a way into many of those "high tech" fields. Today, those roads are
available by alternate means, just as the "entry level" license in ham
radio has changed from the Novice to the Codeless Tech.

>I can do similar research to see if the same applies in your country?
>Larry ve3fxq

The FCC website is www.fcc.gov, but I can save you the trouble of
the search. CFR47Part95 (CB regs) require that any transmitter used
for Part 95 operation must bear Type Acceptance for Part 95. No
currently available amateur equipment has Part 95 Type Acceptance,
so defacto, no current amateur gear could be used legally on CB.

Now it is *conceivable* that a manufacturer might submit an amateur
rig for Part 95 Type Acceptance. If it were granted, then there would
be an amateur rig which could legally be used on CB. But the requirements
for Part 95 Type Acceptance virtually rule out the possibility that such
a thing could happen, IE one of the requirements for Part 95 Type
Acceptance is that the radio must be incapable of transmitting outside
the authorized Part 95 frequencies. That would seem to rule out the
idea of an amateur/CB transmitter.

>>Not really ...

>Do I detect a contradiction?

No you don't. Keyword here is "maliciousness." Attempting to be the
one heard by the DX station when he/she says, "QRZ?" or something
similar should not be considered malicious.

Maliciousness would occur when someone gets pissed off because they
cannot break through the pile-up and they go into cw mode and key
down, throwing a carrier on the frequency. That is intentional
interference.

But that is only one ham's opinion. Seems extremes are in vogue here
and it will probably continue that way before this thread ever fades.

I had a friend here in Camden county that got a leased car. When he tried, and even went to Trenton to be sure, he was informed that leased cars are not OWNED by the person who has the amateur license; therefore, under NJ Motor Vehicle Codes they are NOT allowed to have the amateur callsign.

However, maybe you can get a CUSTOM plate, which is covered under a different Motor Vehicle Code.

Be warned that if you are married, and the vehicle has both your names on the title/registration, you can't get amateur tags either. The vehicle MUST be registered under the name of the amateur license holder only.

Good Luck,

>Perhaps, but in this case, his observation is right on target.

Yes, indeed. We should all stay home where it is safe. If we
just have Domino's bring pizza in we won't have to risk life and
limb on the expressway to go to the store.

When I used to fish, in the mountains, I realized it was just as
good an excuse as any to go tramping around the deer (and occasional
bear) and stand in the river in glorious places. DXpeditions are
the same. It's fun. It's even relatively safe (strewth, certain
hardy souls even live full-time on these islands).

They don't do it for the QSL cards (after all, most of 'em probably
already have 5BWAS). It's fun to do something extraordinary, and
combine it with something you enjoy.

...but think about it. Do you REALLY want to label your car with a sign that gives any and all the ability to see the plate, and within seconds, know your address and that you are not now at home? Or where to come and visit you should they decide you have committed some sort of grievous offense against them?

Twenty years ago, it might have been different. If you want to ID yourself as a ham, consider doing something in the generic; a Q-signal, a prosign, or some other ham-ism. You'll start as many conversations, but you won't be putting yourself and your family into a vulnerable position.

>INDUSTRY.

Oh please! You do not need a $5,000 rework station to do SMD. A
very functional SMD rework kit can fit in your coat pocket and set
you back less than $100 retail. I know, I have one in my coat pocket,
and I actually pull it out and do SMD rework on professional gear,
and my ham equipment too. You don't need expensive equipment,
you just need the right equipment, and a bit of skill in its use. I
actually *prefer* to work with SMD than to work with thru-hole
or tiepoint and solder lug construction.

The expensive SMD rework stations have their place, in production
level board rework, but they are really clumsy for ordinary construction
and repair work. A manual kit is much more flexible. It lets you work
on equipment without having to strip it down so you can put the board
on the rework stage.

>It has taken 12 years, and now I have:
>
>Oscilloscope (Tek 454)

Ok scope, but I like the 453A better ($300 a few years
ago, but they're cheaper now). I've also got a 2465A
(picked it up for a grand at a bankruptcy sale), but I
still use the 453A more. It's got better trigger circuits
for what I do.

>A general coverage receiver

The IC-735 or the IC-706 fill that niche for me.
They also double as signal sources when used
with a dummy load, a 30 db coupler, and a step

attenuator.

>Two freq. counters (up to 1.5 GHz)

You know, I can't imagine needing two frequency
counters. I rarely use the one I have. If I had two,
I'd never know which one to believe. :-)

>A handful of wattmeters

Two Birds and a handful of slugs. I've also
got one of the HP power meters, and even
have a working thermistor mount for it. I've
got $100 in one of the Birds, but only paid
$25 for the other. I scrounged, swapped, or
repaired and calibrated the slugs to get what
I needed, and the HP only set me back $30,
I'm still gloating over that.

>DVM with capacitance, hfe, etc.

Yeah, handy, got that, three or four of them
come to think of it. I can't seem to resist buying
whizzy wow DVMs. But my Simpson 260 gets
more use. It's hard to beat that analog indicator
for tuning up equipment, or just doing a quick
"kick" test on a dubious electrolytic.

>Y'know, I'm just dyin' for someone to find me a super deal on
>the SERVICE MONITOR I wanted, but DAMN if I can't get one.
>
>Oh yeah, I spent that money on a CAR.

You just haven't looked hard enough. I bought my IFR500
Service Monitor for $750 and my Tek 491 spectrum analyzer
for $500 and my Wavetek sweeper for $200 (with 14 inch XY
display for sweeping cavities, neat toy) and my Marconi deviation
meter for $50 (didn't need it, but what the hell, it's got a funky
meter on it I couldn't resist). You've just got to know where to
look and be persistent. The deals are out there, and you won't get
much of a car for what one costs.

>I could REALLY use some modern, leading-edge test equipment, but
>am I'm gonna dump $25k into it? No! If it were my
>BUSINESS that required it, yeah. For now, I'll just borrow
>other folks' stuff - and they seem to have no problem letting me.

That works, but methinks your tastes in test equipment are a bit more
upscale than necessary. Drop back a generation and you can have the
functionality you need for a lot less money. Hell, I probably have more
test equipment than I really need. I bought 3 HP608D signal generators
last spring for $100 total. I used parts from one to fix the other two,
sold one of them for $100, and sold the junker for $20, and I've still

got a nice functional unit. But the IFR will do what it does (and more),
or I can use one of the transceivers with the attenuator. I don't really
need it, but I'm $20 ahead of the game already, and it is handy to hold
the bench down to keep it from floating off. :-)

You don't need SOTA test equipment to work on SOTA equipment.
It's nice, but it isn't necessary. A little bit of skill and knowledge can
let you do what needs to be done with a lot less expensive equipment.
Ok, so that 64 channel logic analyzer over in the corner is close to
SOTA, but I *built* it (in an old S100 chassis). If you can't afford
to buy new, and what you want isn't available on the used market,
build it. You're a ham, use a little ham ingenuity.

Hi Jeff,

Question is.....are they doing it maliciously? If not, it would not
be intentional interference but something I would call incidental
interference.

They all get hot. The smaller the radio, the worse the problem. The back
is the heat sink, and the less area ti dissipate heat, the hotter the radio
will be. Best solution is to buy a
mobile radio and use the portable as it was intended to be used.

I was watching the FCC transactions go by, and saw that
the 'Red River Radio Club' had given up a 1x2 call
in favor of K0TEX!

I wonder if it'll hold up. Any rules about 'bad taste'
as there are for vanity license plates?

if you remember you physics. then it will be easy to find the best antenna
1/2, 1/4, 1/8 wave simply divide 300/frequency (mhz)
300/150 = 2 so a 1 meter antenna is a 1/2 wave for a 150mhz frequency.

Greeting xq2fod
question: where does xq2 come from?
comment: I must admit I have to agree with you with one
question/exception. If we drop the cw requirerment what will
eventually happen to the cw subband, in your opinion. I would hate to
have no cw subband in the foreseeable future.

Michael P. Deignan <kd1hz@anomaly.ideamation.com.nospam> wrote in article
<5un9ua$cl9@anomaly.ideamation.com>...

While I've been ignoring Mike lately and had intended to do so, his first
line was obviously aimed at either Gary or me, since he always seems
to refer to us as "technocrats" when either of us mentions something
that he doesn't, can't, or simply refuses to understand ...

> I'm sure some techno-crat will jump in here with a bunch of personal
> insults directed at myself and others, but here goes...
>
> I believe you are essentially correct. However, the underlying reason
> for this is multi-fold. First, radio and RF systems are fairly complex
> today -- a lot more complex than they were 30 years ago.

Gee in many respects it's getting easier for the majority of designers ...
with modern integration it takes fewer parts to implement an entire radio
and much of the "hard" work is already done by the chip designer ...

>When I say
> "complex" I don't necessarily mean the designs have changed dramatically,
> but many small things combine together -- SMT, for instance, makes
> equipment a lot harder to work with (ever try desoldering one of these
> ICs with pins spaced a micron apart? I know I can't do it -- my fingers
> are just too fat and not steady enough);

I have this image of Mike attacking a 200 pin TQFP (thin quad flat pack),
where the leads are perhaps 20/1000 center-to-center spacing, with his
250 Watt monster soldering iron (the one that weighs 5 lbs. and has a
tip that's about 1/2" in diameter at the base of the beveled point).

The problem, Mike, is that you don't have the proper tools and you don't
know the proper technique ... the size of your fingers has NOTHING to
do with it ... the size of your *brain* ... that's a different story ...

> the reliance by equipment
> manufacturers on custom ICs is another problem -- so much for those
> troubleshooting skills when you don't know if pin 121 is supposed to
> be giving plus or minus 5 volts.

That's what service manuals and schematics are for ... figure out which
chip is bad, them order a replacement if it's not in your junk box ...

[whining about the cost of test equipment deleted in the public interest ...
see my reply to Scott's whining in the same vein in another post]

> Plus, there is an education gap.

Yes ... Gary and I (and others) often lament the appalling level of
technical ignorance amongst hams ... particularly those who
stagnated in about 1950 when they got voice privileges and haven't
learned a damned thing since ...

> I know very many broadcast engineers
> who are hams (I know one who uses packet to get telemetry and control
> a remote transmitter site, and another who uses a 1.2ghz link to
> monitor a couple of transmitter sites from his house :-)) However, these

> as a broadcast engineer and today is a VP of engineering at a major
> television holding company. If you look back over time you'll see that
> many hams were "in the business" somehow -- engineers, EEs, radiomen in
> the service, etc.

If you took the time to find out the truth of the matter, you'd find that
a very large number of us who are "in the business" (of radio and/or
computer electronics) got interested in the field as youngsters because
of ham radio ...

> Fast forward to today. Whether true or not, today people in this country

> to be more productive. I know that, in my case, the last thing that I want
> to do when I come home from work is sit around working on wireless amateur
> networks all night -- I just spent all day doing it.

Many of us *are* "like the mailman who takes a walk on his day off" ... many of
us feel fortunate to be able to earn very fine livings doing something that we
enjoy enough to play with for fun in the evenings and on the weekends ...
(I get the impression that you don't like your job or your lot in life very
much ...
certainly not like I like mine ... I feel sorry for you for that ... genuinely
..)

And before you start telling me "get a life" and calling me a geek, I would
point out that I have a lovely wife, that I took 3 years off from work to sail
from California to Florida at a VERY leisurely pace, and I also play the
guitar,
go camping, river rafting, fishing, kayaking, and dabble in amateur astronomy
(we have a 12" Schmidt-Cassegrain 'scope ... with computer controlled drive,
of course ... CCD imaging comes soon ... I'm thinking of designing and building
a new CCD camera and writing the software for it)

> Another hinderance is contractual clauses signed at time of employment.

> clauses like these. So, if you're an EE working on some new modulation
> technique, are you going to work on an unrelated project at home and
> potentially open yourself up to liability?

I deal with those issues "up front" with employers ... it is quite possible to
negotiate those issues if you're wanted badly enough ... if you're
"run-of-the-mill"
you'll probably be told, "this is our standard policy, take it or leave it" ...
if
they know they need your skills badly, they'll negotiate something reasonable
rather than lose you to someone else who will ...

> These are just a few of the reasons why amateur radio is in the state it
> is today. Just as there are 600,000 amateurs, there are 600,000 different
> reasons why activity in amateur radio is declining.

Baloney ... there are about a half a dozen major problems that can easily
be identified by anyone with any sense ... Solve them and 99% of ham radio's
problems will be gone ... the remainder are trivial ...

> Some people here seem to think that unless you are a propeller-head who
> spits natural-logs, you don't belong in ham radio (I, for instance, don't
> spit natural-logs -- I spit raw embedded systems machine code -- so
> I certainly don't belong).

Actually, if you knew how to apply your coding skill to amateur radio
applications, you might be quite useful ... if you're as good as you seem
to think you are ... but you don't like what you do enough for that, right???

> My belief is that a balance is necessary. Amateur radio needs its fair
> share of propeller-heads, but we also need people who know how to
> communicate effectively. The last SkyWarn net I heard in this area was
> a disaster -- people keying all over one another, not giving effective
> reports (giving "light rain with gentle breeze here" reports when the
> net control op asked for "severe weather reports"), and so on.

A certain amount of technology is necessary to build, field, and maintain
the radio systems necessary to provide public service communications
(just the technical and learning part is ALSO very valuable to society ...)

However, you are right about needing to learn how to communicate ...
but knowing Morse code does not contribute to that skill one iota ...
as someone said the other day, it is just as easy (probably easier)
to instill the proper procedures and protocols into people for use on
voice nets as it is for CW nets ... and voice nets can be much more
effective in tactical situations ... for bulk traffic transport, Morse can't
come close to a well-designed digital system in terms of accuracy,
efficiency, and throughput rate ...

Besides ... use "propeller-heads" can communicate pretty well ...
I've logged many hundreds, perhaps into the low thousands, of
hours of emergency services air time ... much of it as NCS ...
and my packet site in SoCal was used extensively during several

earthquakes, lots of major brush fires, and the crash of an AeroMexico
jet airliner into a residential neighborhood with the loss of all aboard
and a few on the ground ...

> Ultimately, I believe it will be the public service aspect of amateur

> However, we can't get their help if they don't know we exist.

We also won't get their help if they perceive us as a bunch of backward, stuck
in the past, olde fartz who still think Morse code is "the bee's knees" ...

>
> Larry who do you think is designing Kenwood, Yeasu and Icom which
> probably represent 90% of the world market? A Ham in North America? (No
> bashing implied or intended)

Heck, no ... most hams wouldn't know where to start ... that's THE
biggest problem facing ham radio today ... (after that are backward rules
and the ARRL)

> Most electronics is computer designed now days

SO ... you contend that computers are designing the new rice boxes???
Hardly ... PEOPLE are designing the new rice boxes ... they may use
computers to draw schematics, simulate the behavior of circuits, lay out
PCBs, etc. but the PEOPLE are doing the creating ... the computers are
just modern tools ...

The problem is that almost all of those PEOPLE are Japanese (no bashing
intended) ... we need to COMPETE in terms of technical know-how and skills
or they'll keep kicking our asses in the future ... ham radio, properly
applied,
can be a force in teaching people technical skills and getting people
interested
in technical fields so that there are workers to build things here again
instead
of having all those jobs go overseas ...

The Japanese are not "working for peanuts" ... they're "working SMARTER" ...
it's time we turned the tide and ham radio *could* be a very noticeable factor.

THAT would be worth more to the US government than all the beepers in the
world ...

You wouldn't know what to do with it if you had it ...

> Sorry, but not all of us can AFFORD the equipment. INDUSTRY has
> MONEY, while WE as INDIVIDUALS do not. That's why there's
> INDUSTRY.

Baloney ... ask Gary how much he has invested in his Weller "PyroPen"
(I think that's the right name ...) Your $5k number is bogus and I really
believe that you full-well know it ...

Ever heard of a "heat gun" ??? I've reflow soldered LOTs of PCBs with
a carefully wafted heat gun ... you can buy no-clean solder paste in
plastic syringes from ESP (1-800-977-4377 for orders; 800-338-4353
to talk to a product specialist ...) They'll also sell you a handy little
"gun" to hold the plastic syringes and squirt a nice, controlled little
"dot" of solder paste each time you pull the trigger ... this works fine
for "one-offs" and small quantity protos ... for larger quantities, you
would want to make/have_made a stencil so you could screen the paste
onto the PCB ...

I know MANY companies that build all of their prototype/beta runs this
way ...

Two more hints ...

1) you need to keep the source of hot air at a sufficient
distance to not blow the smaller parts around when the solder paste
goes liquid and reflows ... this is when the surface tension of the solder is
supposed to cause the chips to "self-align" on the pads ...
2) it helps a lot if you have a solder mask on the board to define the pads
well ... if you're ordering boards from a proto house, I would suggest SMOBC
(that's "solder mask over bare copper" ... if they use a tin reflow finish on
the
entire board, then solder mask over that, you'll sometimes get a "crinkle
finish" effect on large ground plane areas as the tin reflow reflows again
under
the solder mask ...

{Scott whines ...]
> It has taken 12 years, and now I have:
[snipped pitiful list, where most valuable item by far was a

Tek 454 scope ... I think those are about $200-300 on the
surplus market now ...]

> the SERVICE MONITOR I wanted, but DAMN if I can't get one.
> Oh yeah, I spent that money on a CAR.
Gee ... I have 2 (cars, that is) ... my wife drives a Honda and I have
Toyota 4x4 truck ... (both paid for) ... and oh, yes, we bought a whole
house full of new furniture, TV/stereos, etc. last year (for cash) ...
and I can still afford new test equipment, computers, etc. How many
computers do you have connected to the ethernet LAN in *your* house?

It took you 12 years to come up with your pitiful list of stuff???
You must not get paid very well ... or you don't know how to manage
money ... or both.

> I could REALLY use some modern, leading-edge test equipment, but
> am I'm gonna dump $25k into it? No! If it were my
> BUSINESS that required it, yeah. For now, I'll just borrow
> other folks' stuff - and they seem to have no problem letting me.

If you're too damned cheap to buy some test equipment (or not smart
enough to earn enough money to be able to afford it) don't whine to me.
I have nice stuff because I work for it and I am willing to spend
the money to have it ... I don't sit around pissing and moaning and
bumming the use of gear from others who *weren't* too damned cheap
to buy it ...

> P.S. If anyone has a new service monitor they're selling cheap,
> I'm looking for one.

Be careful, Scott ... you get what you pay for ...

From: lar01@sprynet.com
Message-ID: <34125e2a.1931913@news.sprynet.com>
Source record: 190827

greetings, fellow amateurs
About a year ago, I did some research, almost by accident, and
discovered something rather interesting. Unless I missread the
sentence, it appears to be OK for an amateur, in Canada, to use his
amateur radio equipment on 27 mhz. I am assuming there are a variey
of reasons for this provision.
Anyways, can a u.s. amateur point me to the fcc intenet address where
I can do similar research to see if the same applies in your country?
Larry ve3fxq
p.s. I am not that interested in 27 mhz, I am just curious. I have
only listened on 27 mhz for about 1/2 hour since its conception. I
hae little use for the band other than to follow its progress since
sooo many of it users seem to get their amateur licence.

Hi Dave S.
I don't disagree completely with you, I just don't think that enough
people are giving amateur radio enough credit for what it has and is
accomplishing.
In terms of technical inovation, does adjustabble bandpass count?

Also amateur radio is far more than just the technology of the radio
you are using. Amateur radio is all the work that amateurs are doing
using amateur radio, eg public service using our technology,
There are so many aspects of technology that amateur radio has brought
to the average person, after you get your amateur licence, that we
don't comprehend, voice repeaters, autopatches, internnational
communications, etc.
There are a lot of things that we, the general public, have that I am
sure were first used in amateur radio.

Larry ve3fxq

QRPp is a mailing list (reflector) devoted to the
discussion of QRPp, low power amateur radio.

Conventional thinking considers 5 watts transmitter
output or less (10w PEP SSB) to be QRP operation.
```

QRPp is milliwatt operation (less than 1w).

It's true. In NJ you have to be the registered owner of the car. There
is legislation to allow vanity plates on a leased car and if passed you
could get those, but it would be $50 annually as opposed to a 1 time $10
fee.

Hi Dave

I forgot to add in my previous message a responce to your comment
about digital displays not being up-to-date technology. I would agree
with you there, they have been with us since the 70's. However what
about technical changes such as digital adjustable filters.

Also, if you are suggestion that these changes are not 'state of the
art' would you be able to site technical changes other organizations
have which are state of the art and are ahead of us?

From: phil <phil@flash.net>
Message-ID: <3412A475.397B@flash.net>
Source record: 190835

My wife will be traveling to the Boulder-Denver area on business soon, and I want to set her H-T memory for some of the repeater frequencies in the area before she gets there. I have an ARRL Repeater Directory, but in previous travel experiences we have found it doesn't always list tones etc. So any info about repeaters in the area, coverage, tones, etc. will be greatly appreciated.

Thanks for reading this post,,,and for any help you may be able to provide!

There is an excellent Colorado Amateur Radio web page (sorry can't
rememebr the URL search on Colorado and Amateur Radio) there is a link
to the Colorado repeater association page. The repeater page lists all
the machines in Colorado including PL tones.

It means that two or more repeaters always transmit what is received
by any one repeater. This allows for wider coverage than is possible
with a single repeater.

For example, in my area there is a linked system called HAMTALK that
has repeaters in both Morgantown, WV and Madison, VA. When I drive to
the mid-Virginia area I can talk to someone here in Morgantown, three
hundred miles away, even though we're talking through different
repeaters. (Different bands, even, as the Madison repeater is on 70cm
and Morgantown on 2m.)

There's a large linked system in Ohio, and another in MD/PA. There's
probably one down your way in NC too.

Linked repeaters are often busy since so many users can hear them.

As long as the people sit quietly in the corner in fear, our federal
government will continue to run over our Constitutional rights untill
they exist no more.
It is time for public protests against the heavy handedness of an
increasingly BIG BROTHER styled federal government.

STATES RIGHTS over the FEDERAL GOVERNMENT!

The wonderful, fantastic, outstanding TECH catalog by Radio Shack is filled with great stuff for all of us technogeeks. It is a must have!

Within this fine catalog are many transceivers, some of which are programmable.

Does anyone have, or know where to get the program that UNIDEN, Radio Shack, and other distributors use to pre-program your radio with?

If you have one of these programs, especially if it is the Uniden version, please drop me a note, or if you dont mind, please send it to my e-mail box at david084@flash.net.

Thanks very much!

The point is that with callsign plates, no interaction with the Dept. of Motor
Vehicles, any other authority, or "access to the state's computer system"
is necessary, just a callbook or callbook CDROM and a laptop ...

Before I drop a wad of cash for this rig, is there a mars/cap mod for 2m and
does it work?
Has anyone tried the mod?
TNX, for any info.

A one time $10 fee? There was no special ham deal mentioned in the
in the NJDMV vanity plate literature which they sent me but which I
never used. What is the name of the correct form to use for this
application?

Regards,

Burt or Daaaaaaaaaaaa or what ever your name is, I would love you to say some of your garbage to my face and I would show you how I deal with garbage. I couldn't help but see your challange to Steve in N. J. and notice what a two faced asshole you are. You trash ham radio but yet you want to talk to him on the air, I didn't think you used ham radio. You are one of these nerds who has made so many enemys that you set back and listen on the bands and wish someone would talk to you. Sounds like you have a bad case of insecurity, get some help Burt before you either die of a heart attack or someone kills you. Burt Fisher <burt@innocent.com> wrote:

Mike,
When I wanted a bit more TX power from my 570 (a little more drive for my amp in SSB mode) I called the Kenwood tech support line. They gave me the info free of charge. It involves using the 13 pin accy plug and shorting two of the leads. A word of caution, once you access the "hidden" menu nearly everything about the rig is adjustable and I imagine you could quickly render the rig inoperable. stan/kb8jlv

>Do you have access to the state's computer system to get the owner
>information that quickly???

I got the following, within 10 seconds of trying:

Callsign: KE4KPV
Name: SOKOL, JOHN F
Address: 4869 INDIAN CREST CT
City: LILBURN
State: GA
Zipcode: 30247
Birthdate: Jun-27-1955
Date issued: Jun-10-1996
Date expires: Mar-29-2004
Last change: Jun-10-1996
License class: Technician Plus

Now, I used the net, but I could do the same thing with a freely-downloadable
copy of the FCC database. On my lap-top. Or on most DX packet-clusters.

I see that plate, I know that you aren't home. I know where
you live. I won't do anything but send you a QSL. I can't speak
for others. Maybe it doesn't matter in Georgia. Or maybe it
doesn't where you live, but does in Atlanta.

>> Or where to come and visit you should they decide you have
>> committed some sort of grievous offense against them?

>Maybe it is *you* that we should be wary of!! (Sorry if I offended you)
>Sorry, that does not wash. All tag information is available at your
>local tag agency, or other state office that can do the check. A nominal
>fee will be charged, but tag (or license) information is PUBLIC RECORD.

Not in New Jersey. Not in most states, actually. And certainly
not at my fingertips the way ham call information is. The easiest
plate to 'run' is ham plate.

But it's up to you.

>Since you did not close your message with your call, maybe your points
>are significant to you. I will differ with your point of view, though!

WA6DCL for, I hope, maybe another week or two. By the way, you don't have to 'sign' on the internet. I suppose they didn't mention that in the Tech question pool.

>Proud to be a HAM !!

Pride has nothing to do with it. Your personal safety and that of your family, in certain parts of the country may have everything to do with it.

Greg

Amateur Extra [Ham since 1968, Extra since 1977]

This document, ranked number 1 in the hitlist, was retrieved from the
ericdb database.

-ERIC_NO- ED395205
-TITLE- Jobs, Income, and Work: Ruinous Trends, Urgent Alternatives.
-AUTHOR- Sklar, Holly
-LANGUAGE- English
-DESCRIPTORS- Competition Dislocated_Workers
Education_Work_Relationship
Employer_Employee_Relationship Employment_Patterns
Employment_Practices
Employment_Problems Job_Layoff Labor_Market Labor_Turnover Poverty
Public_Policy Salary_Wage_Differentials Tables Trend_Analysis
Unemployment
Unions
-IDENTIFIERS- Global Economy
-ABSTRACT- This book examines recent trends in the areas of jobs,
income,
and work. Among the trends discussed are the following: upward
redistribution of wealth; persistent impoverishment; less disposable
income; lower wages and higher education; union-free labor and
increasing
numbers of "disposable" workers; competition for global corporations
and
free trading on cheap labor; rising U.S. unemployment; deceptive
methods of
measuring unemployment and underemployment; "technological
unemployment";
attempts to hide bad economics behind scapegoats, blame women for
illegitimate economics, and reduce welfare instead of poverty;
unreversed
discrimination; the locking up of "surplus" labor; the cycle of
unequal
opportunity; disinvestment and misinvestment; and unfair and
unsustainable

development. The need to include economic rights among human rights is emphasized. The following are among the policy elements said to be keys to
a viable future: all-age social security; fair taxation and income support;
work fair and full employment; shorter hours and shared work; workers' rights; environmentally sustainable development; conversion of the military-industrial economy; nonviolent conflict resolution; codes of conduct; corporate accountability; community investment and redevelopment;
nondiscrimination; child caring; universal health care; equal educational
opportunity; and participatory democracy. Twenty-one tables/figures and 215
reference notes are included. (MN)

>on 40m? I can work CW 500Hz away but I'm sure someone listening to
>their broacast is hearing my 500Hz hetrodyne, is that poor amateur
practice?

Yes. If you are "sure that someone listening to their (legal) broadcast
is
hearing" your 500Hz hetrodyne, then that is poor practice. FCC rules
require you to operate so as not to cause interference to services in
other Regions (97.303(a)).

Don't be so sure. First, you assume that fellow hams are all 'good guys.' Or at least people who've been exposed to ham radio. Maybe that used to be true, in 1955, but not so today. Hams do get done for assault-and-battery from time to time.

I don't follow the burglar-biz carefully enough to know if the connection has been made between letter-(or two)-number-letter-or-three is someone you can look up for free in a database available on the net. I'd think it has to happen eventually.

>Besides, what person actually goes around with a laptop and QRZ CDrom
>looking specifically looking for radio callplates.

It's a tool by which someone who is looking to pick a victim can get the information required to make them a more convenient victim.

So long as you understand what information it makes accessible, and how, you can make an informed decision about how to make that information available.

NO NO and NO.. (1) the assumption exists that average Joe knows that looking at your plates are ham related. In New Jersey, the call plates look just like all the others (except for the insipid specialty plates) There is nothing on the plate, unlike New York, that signifies amateur operator. Except for the antenna on the trunk, my car with its plates look like any other car with vanity plates

What about the induhvidual who sits in his car and listens for all the mobile operators going to work. Don't they ID every 10 minutes?? Can't this induhvidual then pull out his copy of QRZ, get your address and then go to your home?? What about the doofus who advertises his vacation itinerary over the local repeater?

What really amazes me however, is that the original question concerned getting call plates for a leased car and now the thread is in chicken little mode

I think the word paranoia is in order here.

Here is a Q-signal list more complete than the one at your site.

QRA What is the name of your station?

The name of my station is ...

QRD Where are you bound for and where are you from?

I am bound for ... from ...

QRB How far approximately are you from my station?

The approximate distance between our stations is ... nautical miles
(or kilometres).

QTH What is your position in latitude and longitude (or according to any,
other indication)?

My position is ... latitude, ... longitude
(or according to any other indication).

QTN At what time did you depart from ... (place)?

I departed from ... (place) at ... hours.

QRI How is the tone of my transmission?

The tone of your transmission is ...

1. good
2. variable
3. bad.

QRK What is the intelligibility of my signals (or those of ...)?

The intelligibility of your signals (or those of ...) is ...

1. bad
2. poor
3. fair
4. good
5. excellent.

QRO Shall I increase transmitter power?

Increase transmitter power.

QRP Shall I decrease transmitter power?

Decrease transmitter power.

QSA What is the strength of my signals (or those of ...)?

The strength of your signals (or those of ...) is ...

1. scarcely perceptible
2. weak
3. fairly good
4. good
5. very good.

QSB Are my signals fading?

Your signals are fading.

QRQ Shall I send faster?

Send faster (... words per minute).

QRR Are you ready for automatic operation?

I am ready for automatic operation.
Send at ... words per minute.

QRS Shall I send more slowly?

Send more slowly (... words per minute).

QSD Is my keying defective?

Your keying is defective.

QRM Are you being interfered with?

I am being Interfered with

1. nil
2. slightly
3. moderately
4. severely
5. extremely

QRN Are you troubled by static?

I am troubled by static

 1. nil
2. slightly
3. moderately
4. severely
5. extremely

QRG Will you tell me my exact frequency (or that of ...)?

Your exact frequency(or that of ...) is ... kHz (or MHz).

QRH Does my frequency vary?

Your frequency varies.

QTS Will you send your call sign for tuning purposes or so that
your frequency can be measured now (or at ... hours)
on ... kHz (or MHz)?

I will send my call sign for tuning purposes or so that my
frequency may be measured now (or at ... hours) on ... kHz
(or MHz).

QSN Did you hear me (or ... (call sign)) on ... kHz (or MHz)?

I did hear you (or ... (call sign)) on... kHz (or MHz).

QSS What working frequency will you use?

I will use the working frequency ... kHz(normally only the
last three figures of the frequency need be given).

QSU Shall I send or reply on this frequency (or on ... kHz
(or MHz)) (with emissions of class ...)?

Send or reply on this frequency
(or on ... kHz (or MHz)) (with emissions of class ...).

QSV Shall I send a series of Vs on
this frequency (or ... kHz (or MHz))?

Send a series of Vs on this frequency
or ... kHz (or MHz)).

QSW Will you send on this frequency (or
on ... kHz (or MHz)) (with emissions of class ...)?

I am going to send on this frequency (or on ... kHz
(or MHz)) (with emissions of class ...).

QSX Will you listen to ... (call sign(s))
on ... kHz (or MHz)?

I am listening to ... (call sign(s))
on... kHz (or MHz).

QSY Shall I change to transmission on another frequency?

Change to transmission on another frequency (or on ...
kHz (or MHz)).

QRL Are you busy?

I am busy (or I am busy with ...).
Please do not interfere.

QRV Are you ready?

I am ready.

QRX When will you call me again?

I will call you again at ... hours
(on ... kHz (or MHz)).

QRY What is my turn?

Your turn is Number ...
(or according to any other indication).

QRZ Who is calling me?

You are being called by ...

QSC Are you a cargo vessel?

I am a cargo vessel.

QSR Shall I repeat the call on the calling frequency?

Repeat your call on the calling frequency; did not
hear you (or have interference).

QTQ Can you communicate with my station by means of the
international Code of Signals?

I am going to communicate with your station by means
of the International Code of Signals.

QUE Can you use telephony in ... (language), with interpreter
if necessary; if so, on what frequencies?

I can use telephony in ... (language)
on ... kHz (or MHz).

QTR What is the correct time?

The correct time is ... hours.

QTU What are the hours during which your station is open?

My station is open from ... to ... hours.

QRC By what private enterprise (or state administration) are
the accounts for charges for your station settled?

The accounts for charges of my station are settled by
the private enterprise ... (or state administration).

QSJ What is the charge to be collected to ... including your
internal charge?

The charge to be collected to ... including
my internal charge is ... francs.

QRW Shall I inform ... that you are calling him on ... kHz
(or MHz)?

Please inform ... that I am calling him on ... kHz
(or MHz).

QSO Can you communicate with ... direct (or by relay)?

I can communicate with ... direct (or by relay through ...).

QSP Will you relay to ... free of charge?

I will relay to ... free of charge.

QSQ Have you a doctor on board (or is ... (name of person) on
board)?

I have a doctor on board (or ... (name of person) is
on board).

QUA Have you news of ... (call sign)?

Here is news of ... (call sign).

QUC What is the number (or other indication) of the last message you
received from me (or from ... (call sign))?

The number (or other indication) of the last message I received
from you (or from ... (call sign)) is ...

QRJ How many radiotelephone calls have you to book?

I have ... radiotelephone calls to book.

QRU Have you anything for me?

I have nothing for you.

QSG Shall I send ... telegrams at a time?

Send ... telegrams at a time.

QSI I have been unable to break in on your transmission.

QSK Can you hear me between your signals and if so can
I break in on your transmission?

I can hear you between my signals; break in on my transmission.

QSL Can you acknowledge receipt?

I am acknowledging receipt.

QSM Shall I repeat the last telegram which I sent you (or some
previous telegram)?

Repeat the last telegram which you sent me (or telegram(s)
number(s) ...).

QSZ Shall I send each word or group more than once?

Send each word or group twice (or ... times).

QTA Shall I cancel telegram number ...?

Cancel telegram number ...

QTB Do you agree with my counting of words?

I do not agree with your counting of words,
I will repeat the First letter or digit of
each word or group.

QTC How many telegrams have you to send?

I have ... telegrams for you (or for ...).

QTV Shall I stand guard for you on the frequency
of ... kHz (or MHz) (from ... to ... hours)?

Stand guard for me on the frequency of ... kHz
(or MHz) (from ... to ... hours).

QTX Will you keep your station open for further communication
with me until further notice (or until ... hours)?

I will keep my station open for further communication
with you until further notice (or until ... hours).

QRE What is your estimated time of arrival at ...
(or over ...) (place)?

My estimated time of arrival at ... (or over ...)
(place) is ... hours.

QRF Are you returning to... (place)?

I am returning to ... (place).
-OR-
Return to ... (place).

QSH Are you able to home on your D/F equipment?

I am able to home on my D/F equipment(on station ...).

QTI What is your TRUE track?

My TRUE track is ... degrees.

QTJ What is your speed?

My speed ... is knots
(
QTK What is the speed of your aircraft in relation to the
surface of the Earth?

The speed of my aircraft in relation to the surface of
the Earth is ... knots (or ... kilometres per hour
or ... statute miles per hour).

QTL What is your TRUE heading?

My TRUE heading is ... degrees.

QTM What is your MAGNETIC heading?

My MAGNETIC heading is ... degrees.

QTN At what time did you depart from ... (place)?

I departed from ... (place)at ... hours.

QTO Have you left dock (or home)?
-OR-
Are you airborne?

I have left dock (or home).
-OR-
I am airborne.

QTP Are you going to enter dock?
-OR-
Are you home?
-OR-
Are you going to alight (or land)?

I am going to enter dock
-OR-
I am home.
-OR-
I am going to alight (or land).

QUG Will you be forced to alight (or land)?

I am forced to alight (or land) immediately.
-OR-
I shall be forced to alight (or land) at ...
(position or place) at ... hours.

QUJ Will you indicate the TRUE track to reach you (or ...)?

The TRUE track to reach me (or ...) is ... degrees
at ... hours.

QUB Can you give me in the following order information concerning:
the direction in degrees TRUE and speed of the surface wind,

visibility, present weather; and amount, type and height of
base of cloud above surface elevation at ... (place of
observation)?

Here is the information requested: ...
(The units used for speed and distances should be indicated.)

QUH Will you give me the present barometric pressure at sea level?

The present barometric pressure at sea level is ... (units).

QUK Can you tell me the condition of the sea observed at ...
(place or coordinates)?

The sea at ... (place or coordinateS) is ...

QUL Can you tell me the swell observed at ... (place or coordinates)?

The swell at ... (place or coordinates) is ...

QTE What is my TRUE bearing from you?

Your TRUE bearing from me is ... degrees
at ... hours.

QTF Will you give me the position of my station according to the
bearings taken by the D/F stations which you control?

The position of your station according to the bearings taken
by the D/F stations which I control was ... latitude, ... longitude

QRT Shall I stop sending?

Stop sending.

QUM May I resume normal working?

Normal working may be resumed.

QUD Have you received the urgency signal sent by ...
(call sign of mobile station)?

I have received the urgency signal sent by ...
(call sign of mobile station) at ... hours.

QUF Have you received the distress signal sent by ...
(call sign of mobile station)?

I have received the distress signal sent by ...
(call sign of mobile station) at ... hours.

QSE What is the estimated drift of the survival craft?

The estimated drift of the survival craft is ...
(figures and units).

QSF Have you effected rescue?

I have effected rescue and am proceeding to ... base
(with ... persons injured requiring ambulance).

QTD What has the rescue vessel or rescue aircraft recovered? ...

(identification) has recovered ...
1. ... (number) survivors
2. wreckage
3. ... (number) bodies.

QTW What is the condition of survivors?

Survivors are in ... condition and urgently need ...

QTY Are you proceeding to the position of incident and
if so when do you expect to arrive?

I am proceeding to the position of incident and expect
to arrive at ... hours (on ... (date)).

QTZ Are you continuing the search?

I am continuing the search for ... (aircraft,
ship, survival craft, survivors or wreckage).

QUI Are your navigation lights working?

My navigation lights are working.

QUO Shall I search for ...
1. aircraft
2. ship
3. survival craft
in the vicinity of ... latitude, ... longitude
(or according to any other indication)?

Please search for ...
1. aircraft
2. ship
3. survival craft
in the vicinity of ... latitude, ... longitude
(or according to any other indication)?

QUP Will you indicate your position by ...
1. searchlight
2. black smoke trail
3. pyrotechnic lights?

My position is indicated by ...
1. searchlight
2. black smoke trail
3. pyrotechnic lights.

QUQ Shall I train my searchlight nearly vertical on a cloud,
occulting if possible and, if your aircraft is seen,
deflect the beam up wind and on the water (or land) to

facilitate your landing?

Please train your searchlight on a cloud, occulting if
possible and, if my aircraft is seen or heard, deflect
the beam up wind and on the water (or land) to facilitate
my landing.

QUR Have survivors ...
1. received survival equipment
2. been picked up by rescue vessel
3. been reached by ground rescue party?

Survivors ... 1. are in possession of survival equipment dropped by
... 2. have been picked up by
rescue vessel 3. have been reached by
ground rescue party.

QUS Have you sighted survivors or wreckage?
If so, in what position?

Have sighted ...
1. survivors in water
2. survivors on rafts
3. wreckage
in position ... latitude, ... longitude
(or according to any, other indication).

QUT Is position of incident marked?

Position of incident is marked by ...
1. name or smoke float
2. sea marker
3. sea marker dye
4. ... (specify other marking).

QUU Shall I home ship or aircraft to my position?

Home ship or aircraft ... (call sign) ...
1. to your position by transmitting your call sign and long dashes
on ... kHz (or MHz)
2. by transmitting on ... kHz (or MHz) TRUE track to reach you.

QUW Are you in the search area designated as ... (designation
or latitude and longitude)

I am in the ... (designation) search area.

QUY Is position of survival craft marked?

Position of survival craft was marked at ...
hours by ...
1. flame or smoke float
2. sea marker
3. sea marker dye

4. ... (specify other marking).

QTT The identification signal which follows is superimposed on another transmission.

I don' t know what class of license you possess but I venture to say
you do not have hf voice privileges. I have never heard anyone, on
hf, bitching about "no-code." and I am on hf all the time.

The only place it appears to be an issue is within the newsgroups and
maybe on VHF/UHF where it would be a local thing.

Hi Larry!

> Greeting xq2fod
> question: where does xq2 come from?

Chile. We have 3 prefixes here: CE for novices and generals,
XQ for superiors, and 3G is assigned sometimes for
special-event stations.

We are almost running out of possible suffixes, so probably
in a few years there will be new prefixes appearing like
CA, CB, CC, or CD.

> comment: I must admit I have to agree with you with one
> question/exception. If we drop the cw requirerment what will
> eventually happen to the cw subband, in your opinion. I would hate to
> have no cw subband in the foreseeable future.

Probably the present trend will continue, that is, using more
and more of the former CW subbands for other digital modes.
Just look at 20 meters: 20 years ago you had CW from 14000 to
14100 (at least here in Chile). Now you have CW from 14000 to
14050 or 14060, and then starts Pactor, RTTY, Amtor, Gtor, etc.
Jump over the 14100 beacons, and you have 20 kHz of packet.

I can well imagine that in 20 years from now we will have
CW from 14000 to 14020 or so, and the rest of the ex-CW band
filled with digital modes (and not only the ones used today).
A similiar situation will happen with each of the other bands.

I don't think that CW will ever be completely eliminated as
a ham communication mode. Just as lots of people are
discovering old radios as part of the hobby (me too!), surely
at all times there will be hams who like CW, even if it is only
as a "museum mode" and for the sake of nostalgia... But making
it mandatory for every ham is absurd.

Bye,
Manfred, XQ2FOD.

Hi John,

> I'm looking for either VHF and also HF/Shortwave frequencies that are used
> by British Airways. want company frequencies!

The VHF frequencies BA will use at PHX will probably depend on which Ground Handling Agent they use. If they are "handled by SW, AA or DL for example they will probably call in on their ops frequency. Some of the ones they use at London Heathrow though include 131.55, 131.80 & 131.90 (All with the c/s Speedbird Ops). Your best bet is to search the 129-132Mhz band as many Airline Ops appear around this band.

From memory 5535 is one of the main HF Ops frequencies with 8921 and 10072 being two others.

Hope you catch something.

I would just like to thank everyone who responded with suggestions or information on trying to locate the Hoffman family aboard the sailboat Montana. It was very nice to know that there is a knowledgalble, compasionate and dedicated community of amatuer radio operaters who would take the time to help a stranger who is not part of this community. We we're not able to locate the family in time for the funeral, but contact was made on Saturday 9/6, they had picked up a VHF transmission (I do not know yet if is was a amatuer operator or the C.G. yet, I did not speak with them), and they called home and left a message as to were they were. The family was able to make arrangements to have the body held for a private ceremony after they return. Thank you again for all you you assistance in this matter, blessings to all.

Sincerely,
P.J. Thompson III

I sure would if I could get one ... Get you from here to there,
inexpensive, and you could fix it if it broke. Today's cars get you
from here to there, are very expensive, and nobody can fix it if it
breaks. A car's a car, the rest of the technology added since the
beginning isn't worth a whole lot when you really think about it. Same
with radio. Just my 2 cents.

Unfortunately, it could be a picture of a naked freshly
born chicken, a picture of the word "chic" unadorned, or
any of a variety of other equally desirable pictures. I
suggest that spelling errors be ignore, but I note that
even the most interesting QSO you've ever had can sound
boring when described. How many people for example can
describe in a manner designed to excite their first driving test?

hi
I'm looking for either VHF and also HF/Shortwave frequencies that are used
by British Airways. want company frequencies!

I am able to monitor them on the ATC frequencies of 118.1 (Phoenix
Clearance), 118.7/120.9 (Phoenix Tower), 124.1, 119.2, 126.6, (Phoenix
TRACON, Approach/Departure), 125.25, 135.15, 128.45 (Albuquerque center)

When I got my ham (NJ) plates, it was a $25 fee. You MUST use the specific form for applying for ham radio (NOT vanity) plates. If you apply for a ham call sign with a vanity plate form, it will be rejected (happened to my wife-who was going to surprise me with the plaets). The rejection says "cannot process vanity request because that combination is a ham radio call sign".

Hey, one case of the government actually looking out for us!

As an owner of several classic and antique cars (as well as
being from the no-code testing side) let me say that
ayone who thinks driiving a model T (or any pre-WWII
vehicle) on a daily basis has clearly never had the opportunity.

I love using my antique sports cars, but they don't
cut it on today's highways. Model T's are even worse, barely able
to sustain a 50-55 mph speed...and that at a constant rattling
abuse to anyone's body.

As to fixing today's cars. Of course they are fixable.
To state otherwise is an indication that the person
making that statement has no comprehension of
contemporary vehicles, their diagnostics or their
engineering.

Jeff's schematics for his very own home-brew
"well-built discrete component" version of the
Motorola 56000 series of Digital Signal Processors
will no doubt make it's appearance here on the
net any day now.

As an incentive, we'll even waive the small
footprint and low-power requirements offered
by the 56000.

I expect Jeff will provide compiler support
and a development kit soon after that.

Way to go Jeff!

3902. Vanity Gate 3 verification?

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-08 00:00:00 UTC
From: neilgould@ti.com
Message-ID: <5v1m92$59l@sf18.dseg.ti.com>
Source record: 190764

I sent in an electronic form for gate 3 on August 18. I sent by
register mail, the payment on August 20. I have not received back
the verification of receipt of the payment. I did call the FCC number
and they said it shows up in the Melon bank list as of August 25.

Is there a way to verify that they really did get the electronic form
and payment? I have been checking the FCC ftp site files but my call
does not appear to be entered. Has anyone who has submitted a gate 3
request shown up in these files at:
ftp://ftp.fcc.gov/pub/XFS_AlphaTest/amateur

Thanks,

>Would you drive a model T or a model A Ford to work tomorrow.

I might do so if I had one. More likely, I'd keep it for special occasions.

But I certainly wouldn't want proficiency in driving an antique car to
be required to get a driver's license. That's perhaps most relevant
to the topic at hand. People with antique cars can own them and drive
them to this day - but not everyone is required to know how.

Sure would! Got you there and back, cheap to buy, and you could fix it yourself. New cars get you there and back, expensive to buy, and nobody can fix them. When you think about it, all the new-fangled stuff on cars (and in telecommunications) is just creature comfort. Once technology reaches a certain level of maturity, new developments in general are just so much fluff.

Yeah, those ole tubes were just awful! But, a junior-high student could build a whole station that worked and that wouldn't electrocute him. I saw a post on one of the amateur NGs a few days ago where a ham was trying to get some encouragement to OPEN THE STUPID COVER on his modern rig 'cause he was afraid of it!!!!

Just my 2 cents.

I applied on August 06, the first day allowed for gate 3. I also sent my
money the next day. It was not logged into the system until August18,
although signed for on August 11.
To date, not one gate 3 application has been done. They have been on
August 05 for 1 and 1/2 weeks now. They state this is because they want to
clear up all the applications that were previously rejected under gate 2
before they go to gate 3.
You can call them, 1-888-CALL-FCC, and verify the check was received.

Good Luck.

[SNIP!!]

Dave, isn't there some way whereas you can send these files via PRIVATE EMAIL *ONLY* TO THOSE WHO WANT IT instead of posting it in a PUBLIC forum for EVERYONE to have to download ALONG WITH ALL THE OTHER ARTICLES we get???

Do you even know how much bandwidth you consumed while transmitting these files???? I don't, but I'd be willing to bet the needle fell OFF THE METER!!!

I don't mean to sound critical or harsh, but at least IMHO Dave, you surely didn't use very good judgement nor netiquette.

For the benefit of all of us, PLEASE, next time you have a file like this, do us all a GIANT favor.....

Send it only to those who want it!!!! It'll save the HD space for those who don't want it, but need the space for other things besides a newsreader.

I do hope you take this as CONSTRUCTIVE criticism as no offense is meant nor taken on my part.

73's for now my friends!!! :-)

Hello..

I'm still working on my GE MVP UHF radio to use as a repeater. Does anyone have any documentation that has what the voltages on the connectors (on all the SAS board sockets) should be? There are three main connectors onto that board, and I have voltages, but don't know if these are correct or what. If I knew, then I'd be able to possibly fnd my problem.

There is a program called LOG-EQF. you can find it on the web. It is a
shareware program. It is a dos based program but has no problem working
with win95. The thing I like the most about it is, there are two fields
you can change for tracking(ie: county, contest numbers).
Just a suggestion....

What do y'all make of this situation?

I'm a "Power Walker", which means I take long, brisk walks as part of my daily workout routine. I average 8 miles/day, 6 days/week. I live in a fairly new Orange County subdivision with a neighborhood elementary school. Since we moved here last July, my daily walks have taken me through the parking lot of the school. Not into the school building, not
onto the playground; simply across the length of the parking lot. For the
past 11 months, nobody has had a problem with this. Today, I was stopped
by a security guard and questioned as to what I was doing there. After I explained that I lived in the neighborhood and was on my daily walk, I was
told that all "visitors" on the school grounds must sign in and be assigned a "badge." When asked why nobody had mentioned anything to me over the past 11 months that I have been walking through there on almost a
daily basis, I was told that it was because "a parent called and complained. She was concerned about the childrens' safety."

So, let me get this straight...even though I am a law-abiding citizen who
PAYS for that school with my property tax dollars...even though I had done
nothing suspicious, committed no crime, and did nothing to endanger the safety of anyone at that school...even though I have no children of my own, but yet am forced to pay ridiculously high school taxes to support the education of other people's children...I cannot walk through the PARKING LOT of my neighborhood school without being given official permission to do so, simply because a parent (whose children I am supporting with my property tax dollars) feels that my walking through the

school parking lot may be a threat to the "childrens' safety?!"

If there are any legal professionals in the audience, I would like an opinion as to whether or not they have a legal right to prohibit me from walking on the premises. If not, what is my legal recourse in the event that they attempt to force me from the premises?

-Drew in Sunny Central Florida-

3925. Re: Vanity Gate 3 verification?

Newsgroup: rec.radio.amateur.misc

From: Phil Johnston <johnston@christcom.net>
Message-ID: <34149A87.954@christcom.net>
Source record: 190787

I filed an application electronically under Gate 3 about 0200 CST on 8-6-97 when I got home from work. It was almost an afterthought as I was tired and had almost forgotten about Gate 3 opening.

I mailed the check to the Mellon Bank the next day -- via Express Mail -- and the check was processed by Mellon Bank on 8-11-97. My bank's Missouri check clearing house received the check back on 8-12-97. I received the check with my monthly statement on 8-26-97. That's fast by my standards. My check has a number "17" in red ink to the left of my check number in the upper right hand corner. I have no idea what the "17" represents. It's more likely related to bank action than anything to do with the FCC.

I checked with the FCC last week, and the lady -- who was very courteous -- said she expected the new callsigns would be issued soon. She said she really didn't know what else to tell me. She DID check the database for updates done that day, and she was nice enough to tell me that no action was shown with regard to my name or callsign. I've been a ham since 1961, and this is the only time I've ever called the FCC other than to inquire about when to appear for a test many years ago. I was impressed by the lady. She was as courteous as a Wal-Mart greeter.

If you go to:

http://www.arrl.org/w1aw/1997-arlb051.html

you will see the ARRL Bulletin on Gate 3 which was issued last week. The center of the bullten message indicates:

"An FCC spokesperson said this week [meaning last week] that personnel are very carefully matching up fees paid with applications filed to ensure that any
call sign request that can be granted, will be granted. In particular, the FCC wants to be sure that no fees for electronic filers go astray. Most of those who are seeking new call signs under Gate 3 filed electronically, but payments still had to be sent
by mail."

Maybe we'll hear something this week. As far as I know, no Advanced Class licensees have been issued vanity calls under Gate 3. I did see last week where two Advanced Class licenses obtained callsigns of former relatives. I'm happy that they were able to do that.

Try tuning around in the 100kHz below the 17m band, say around
18MHz plus or minus 50kHz. I've often heard SSB tranmissions which
sounded like aircraft crew with UK accents.

Content-Transfer-Encoding: 7BIT

KB8EE's 10 Minute ID'er. A software id'er written for Windows 95/NT only.
This program will not work in Windows 3.1!

The id'er allows you to display text of your choice in a window that also
displays the current time of day in am/pm, gmt, military(24 hr) or zulu.
The window also displays the time remaining until ID time. If the form is
minimized the time remaining is displayed on the task bar.

The current time, and ID times can be announced through your sound card
if you so desire.

You must download the hcsnd95.dll file for the audio portion of the
program to function.

Try it for free.

11 meters used to be an amateur band in the U.S. It was removed from amateur service to create CB in, I think, the '50s. Some old ham rigs have an 11 meter band on them.

Well.. I would say amateur radio will die unless it can keep up
with technology.
We are talking cell phones that cost pennies and access to a network,
at least on weekends, that many can afford. So why use the restricted
auto-patches?

We're talking digital modems that make 1,200 baud packet look like its
ice water.

We are talking more and more ops that can't bother to be curteous.

What in the world would attract anyone to ham radio? I got in for
the delight to building and designing electronics. That, apparently
now is a thing of the past.

One of my classes in EE had to get their nocode tickets. We designed
a little telemetry weather station that used a ham frequency and the
University ARC's license.

Far as I know, only one student expressed a desire to really get on
the air. The rest just got the ticket for the 5 points it gave them
in the calculation of their final grade
.

A base 64 decoder such as SJHb64 will decode it.
Just save all the parts into one file and use the decoder.

I understand that the FCC has raised the fee for vanity callsign applications. Effective date?? New amount??

Also, once you have been issued a vanity callsign, is the fee again required at renewal time? Or are renewals free as they are (were??) for non-vanity callsigns?

If the fee is ongoing, I'll probably feel it's too expensive to gratify my ego with a vanity callsign.

Tnx es 73,

3955. Help - need DC/MD/No.VA/Balto. ham who's a dirt biker

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-09 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5v3ggueei1@w3eax.umd.edu>
Source record: 190668

The Laurel ARC (Laurel, MD) every year provides communications
for a major cross-country running event.

Unfortunately, this year, our normal dirt-biking-ham will
be unavailable, and he says that an ATV (all-terrain vehicle)
just won't cut it.

Any DC/Balto/No.VA/MD area dirt-biking hams who can help?

Thanks!!!

And why not? Because, at the root of the hobby, people just want to communicate with one another. So, the KISS principle applies. SSB and FM voice represent the two most popular modes in use today. Is it any wonder that both of these modes are fairly basic, they function, and allow people to communicate with one another? Of course not, when you consider people's ultimate goals of just being able to get on and yack.

> radios-on-circuit-boards?

You don't specify frequency range... If you want to receive the
weather satellites, you can buy the Wefax Explorer from Quorum.
It's a complete VHF receiver and decoder for those satellites, on
a single PC card.

Cheers,
Manfred, XQ2FOD.

Hello Michael and all!

> We've seen numerous posts from technocrats claiming that amateur radio
> is supposed to be high-tek, and if you're not high-tek, you don't belong
> in amateur radio.

High-tech is expensive. And amateur radio, as a hobby, should
not eat up too much money. I believe that instead of real
high-tech, ham radio is better suited to do "moderate-tech" on
a very low budget base. In that we excel! We have sats,
quite efficient HF digital communication, etc, while most
hams are real cheapskates! :-)

> So, I pose this question: If you had to outfit your shack with test
> equipment to make "The Ultimate Test Bench",

There is no ultimate test bench! I cannot think of "having
it all", without any further additions for all of my life!
A test bench must grow with the abilities of its user and
the scope of activities.

> what would you buy

What I have already:

- A digital(autoranging) and an analog multimeter (cheap but quite good)
- RF test points for them (homemade)
- A 50 MHz dual channel scope (bought cheaply in bad shape and repaired)
- A small portable scope (homemade)
- A low noise adjustable current-limited power supply (homemade)
- A dipmeter for 300 kHz to 250 MHz
- A function generator with sweep (homemade)
- A RF generator with modulation
- A frequency counter for 0 to 3 GHz
- A SWR meter for 1 to 1300 MHz (homemade)
- RF impedance bridges covering all bands (homemade)
- RF Power meters and dummy loads for all power levels and bands
I use (all homemade)
- A few RF attenuators
- An audio distortion meter and low distortion dual-sine oscillator
(homemade) [I do hi-fi too! :-)]
- My radios (they are very useful both as signal generators and detectors)

What I miss most:

- A good spectrum analyzer (They are E X P E N S I V E !!!)
- An FM sweep generator (will build one someday)

> how much would you spend?

For everything I already have on my bench (except the radios),
I paid about US$1000, plus a lot of work building things!

For a spectrum analyzer I'm willing to pay another 1000, but
they cost MUCH more! (sniffff)

73,
Manfred, XQ2FOD

> On Tuesday, for some reason, I decided to disconnect this cable. The
> problems mentiond above disappeared.
>
> Any thoughts as to what happened?

RF pickup from your nearby radio station. For this to happen, you need
either an unshielded cable, or that the shield is not properly grounded
in the connector (pin 5 for DB9, pin 7 or 1 for DB25).

> At this risk of over theorizing this, the cable is about 6 feet. I am
> wondering if it was acting like an antenna as was picking up the
> cordless 48 mhz phones, in the house.

Unlikely. Those are milliwatt devices. Much more likely it was a 50
Watt VHF transmitter or something like that. You can have multi-
quarter-wave resonances, or you can even have enough RF pickup from
an unresonant cable.

> I am open for suggestions, thoughts, ideas, etc.

Of course, it's possible that the cable was just coincidence, and
that the reason is something else, like:

- Dead motherboard battery
- faulty motherboard

- Virus
- faulty software
- unstable power supply

Bye,
Manfred.

Well your *probably* looking for other scanner/SW radios but in case you like listening to the FM broadcast band there's all kinds of FM radios on a card at the auction web "http://www.ebay.com" I got mine for $8.00 plus shipping , it's great for listening to the "oldies" on FM stereo while flaming someone on usenet or hunting down a spammer ;) ..... I have recently seen a AM/FM card but it was about $60.00 , AFAIK these 3 cards are the only ones so far.

Patrick, I agree Dave shouldn't have posted the binaries here but perhaps you could save yourself some grief and and setup your newsreader to only get the *headers* and then select the ones you want to read/download, unless you have some good reason to download *ALL* of the postings without first seeing which ones are of interest to you. It took me about 2 seconds to download 60 some headers this morning which included some of Dave's big binaries.

A friend and will be rovers in the region on sunday. Maybe we could
schedule a couple of contacts on 2m FM?

This is an unworkable solution for off-line Usenet readers -- they do,
in fact, download everything. Off-line reading has its advantages,
particularly with traveling users.

As in the US, only Type Approved equipment can be used on the 11M band. CB equipment can, however, be modified by a qualified (Advanced) Amateur to operate in the amateur bands. Unless something changed and there's a conspiracy to keep me in the dark, this is the rule.

What you fail to recognize (or accept???), Mike, is that more and more
of the *modern* radio IS a computer ... from the user interface, to the
display controls, to the storage of frequencies and modes, to the actual
processing of the signals including modulation and demodulation (not just
of "digital modes" but of SSB as well ...) The digital domain is moving
ever closer to the antenna ... whether you like it or understand it or not ...
try as you might, you and your cronies will be unable to stop this progress.
I can't for the life of me understand why you *want* to ...

> >The Japanese are not "working for peanuts" ... they're "working SMARTER" ...

> a way into many of those "high tech" fields. Today, those roads are
> available by alternate means, just as the "entry level" license in ham
> radio has changed from the Novice to the Codeless Tech.

The only reason that ham radio is not the point of entry into the high tech
fields is that ham radio is no longer high tech ... it's backward and stagnated
FAR behind the rest of the technical world ... it used to be that people got
into ham radio and developed into a career from it ... most of today's hams are
too technically incompetent to qualify for an entry level technician's job in
the
industry ... and we can't recruit the qualified people from industry because
ham
radio is so backward ... DOUBLE WHAMMY ... we lose on both ends of the deal.

And folks like you who like it that way actually PROMOTE the continuation of this dismal situation, for the primary purpose of keeping the bands to yourselves
and in hopes that ham radio might just barely outlive you ... apparently you could
care less about what happens after you're gone as long as NIMBY is maintained.

3977. Tek 465 manual cover page needed

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-09 00:00:00 UTC
From: kd1hz@anomaly.ideamation.com.nospam
Message-ID: <5v4kcm$m2o@anomaly.ideamation.com>
Source record: 190690
Cross-posted to: rec.radio.amateur.misc,sci.electronics.misc

Okay, this is going to sound pretty strange, but here goes:

Someone walked off with my Tek 465 Oscope. In order to file an insurance claim, I need either A) my receipt (no such animal, I bought it used at a ham-fest), or B) a copy of the cover page of my manual (which was in the pouch along w/ all my test leads w/ the scope.)

So, essentially, I'm in a catch-22.

Does anyone have a Tek 465 manual where they can fax me the cover page?

Thanks,
MD

Doug:

On September 15, 1997, the Vanity fee will increase from the present $30 ($3/yr for 10 years) up to $50 ($5/yr for 10 years).

A fee must also be paid at renewal in ten years (unless the requirements change between now and then).

rec.radio.amateur.misc

Stop HR2369!

A new proposed bill has the potential to eliminate the scanner industry, as well as greatly affect other radio services, such as amateur radio, MARS, CAP, news media, and radio hobbyists activities.

** Contact your local Congressional representative and voice your opposition to HR2369. If passed, this bill will make it illegal to sell, trade, manufacture or modify any radio receiver with certain restricted frequencies. Wide band amateur radio transceivers will become illegal, as well as general hobbyists who monitor fire, ambulance, and police radio services.

It will also be a crime to own such radio receivers and to listen to these frequencies. Violators will be subject to up to a $500,000 fine and up to 5 years in prison, or both!

For more information, please visit our web site at http://kb8uyz.com, where, under the Radio News section, we have the complete bill posted. Also check out the Grove, Monitoring Times web site at http://www.grove.net/mt2369fea.html. A complete background to the bill is listed.

Please let us hear your comments on this new bill. We will be posting a page of viewer comments within the next several days.

In my opinion, the main reason we don't have masive trunking systems
on vhf/uhf for packet etc. is because most amatuers don't want ot

invest in the system.

For example, most of you, using the internet, are giving your internet provider about $20 per month. This money is used to build the network.

If we amateurs gave our local packet bbs operator $10 per month to build the packet radio system you would probably see a system which would be much better than it is today.

Well of course. But information has time value, so my original question remains: how much less secure is the radio implementation of DES than the full-fledged version?

There is only one way to not be bothered by them and that is to simply
not read them.

Negative messages only bother you, the plural you, if you read them or
let them. Ignore them and they won't bother you.

Unfortunately you can't make them go away, but the more you comment
about them the more the will persist.

>of "digital modes" but of SSB as well ...)

And what you fail to recognize (or accept???), Carl, is that if it walks
like a duck, and quacks like a duck, then its probably a duck. Put the
latest Pentium II system running Diablo and a Yaesu FT$10000 on a table
next to one another, and I guarentee you every kid you let sit at the
table is going to sit in front of the Pentium II computer. They don't
care, quite frankly, that the Yaesu FT$10000 also has a Pentium II
CPU with DSP, SS, and everything else imaginable in it.

>The digital domain is moving
>ever closer to the antenna ... whether you like it or understand it or not ...
>try as you might, you and your cronies will be unable to stop this progress.
>I can't for the life of me understand why you *want* to ...

Who wants to stop it? You're quite welcome to operate whatever digital
mode you're qualified for. You don't see me trying to ban Pactor, packet,
SS, or anything else. If you want to rewrite the regulations to allow
more liberal digital experimentation, I'm all for it. If, on the other hand,
you want to rewrite the regs just to allow a bunch of people access to
HF SSB to yack, sorry, I don't support it.

>radio is so backward ... DOUBLE WHAMMY ... we lose on both ends of the deal.

Well, I certainly wouldn't be recruiting system programmers from the
local community college -- that's effectively what you're suggesting.
There are other, more interesting, methods of getting into "high tech"
today. Computer-related activities are usually the method today. Quite
frankly, I see nothing wrong with this in the least. Communications was
big in the 50's and 60's, and computers are big in the 80's and 90's.
Classical and Jazz were big in the 50's, rock is big today. Times change.

>And folks like you who like it that way actually PROMOTE the continuation of
>this dismal situation, for the primary purpose of keeping the bands to
>yourselves
>and in hopes that ham radio might just barely outlive you...apparently you
>could
>care less about what happens after you're gone as long as NIMBY is maintained.

My expected lifespan is to 2035. I anticipate amateur radio will be dead
long before then.

They're probably being auto-cancelled. It's generally considered to
be very bad manners to post binaries in a discussion group. Therefore,
there are 'bots out there that cancel them.

If you want to distribute software, you should post a message
indicating where the software can be found on the net - either an
FTP site or a web page. Discussion groups are NOT for software
distribution.

I had a bit of a time decoding this one also. I found that WinZip
(Version 6.3 Beta 6a) would decode it. Put all eleven sections
together in order. Take out the plain text, in Part 1, down to:

Content-Type: Application/Octet-stream; name="Hamclock.exe"

Select "Open" in WinZip and load the file. You sould see four file
names appear. Then, just extract the files to a directory.

Jeff's schematics for his very own home-brew
"well-built discrete component" version of the
Motorola 56000 series of Digital Signal Processors
will no doubt make it's appearance here on the
net any day now.

As an incentive, we'll even waive the small
footprint and low-power requirements offered
by the 56000.

I expect Jeff will provide compiler support
and a development kit soon after that.

Way to go Jeff!

Radio Amateurs of Canada's website recently added music that automatically plays (midi).
I can't see the point of listening to it whenever I visit the site, it is a nuisance to shut off the sound on my computer.
The site is a very useful one - I think it is a shame to add something that is both annoying and without utility.
Am I the only person who doesn't care for this addition - maybe other people always have their headphones on when browsing!
Curious if anyone else has noticed this. I asked about and was told that :

"The background music is an experiment to see what kind of reaction I get. It also tells me something about the number of readers who can read and run midi files.
If the response is negative, I will certainly remove it."

Not quite. How many production 4-cylinder engines were available 20
years ago that could develop 170HP and got 30MPG? My Integra does. And that
certainly qualifies as a bit more than just fluff. And there's still
plenty of work that can be done under the shade tree. If I want do
diagnose why my car is misfiring, I can have the CCM generate the
beep codes to tell me what part of the system is failing. All it takes
is a service manual. Try *that* with a 69 Mustang. Not to mention that
ther service intervals are *much* longer now. And I'm more than happy
that I won't ever have to replace another set of points. :-)

If you are involved in the design of transmission lines, directional couplers, distributed filters, or RF & microwave electronics in general, take a few minutes to acquaint yourself with the all-new TransCad Version 4, the most comprehensive single & coupled structure synthesis offering available:

http://www.webblabs.com/transcad.htm

TransCad is without peer. And with TransCad there is no single-user limitation. The one-time $975 license fee allows department-wide TransCad usage, with no annual support fees and free upgrades for two years! TransCad is a necessity for every department involved in the design of high frequency electronics. For more information, see our web site or e-mail your questions. TransCad is in stock for daily shipping to any destination worldwide.

Sincerely,
Kathy Goerg

4006. Amateur radio only going through phases/changes

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-10 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <3416ebeb.11165457@news.sprynet.com>
Source record: 190511

Amateur radio is only going through phases/changes.

Ever since amateur radio was started, this hoby has been going through

phases or changes. From spark to CW. CW to phone (AM). I am too young to be able to relate to the phases before 1965, but this hobby, in my opinion, would be somewhat boring 'if' we didn't have periodic changes, don't you think?.

Now, amateur radio is only going through more changes and, even though I am not quite where it is going, I am really looking forward to what is coming next.

During the midish 60's, amateur radio was being converted from AM to SSB. A lot of amateurs did not like SSB because of how it sounded on a AM receiver and how much effort was needed to tune it in on a receiver with a BFO.

During the early mid 70, amateurs were very nervous about the movement of amateurs from local conversations on HF to local conversations on VHF/UHF. Amateurs used the commercial conversion from wide band fm to narrow band fm as a means of getting very inexpensive equipment to get us onto vhf fm. From there we introduced

ourselves to fm voice repeaters and all of its spin-offs.

During the mid 80's, there was the concern about packet radio. Many thought it was the downfall of amateur radio. They thought that in order to use packet they had to become computer literate.

Since the mid 60's, and even earlier, amateurs have had to endure the everchanging world or communications technologies. But we have succedded and amateur radio improved with each change.

As the cellular phone technology improves we will gain with the poliferation of ic's and transistors that can handle higher and higher frequencies. As this happens, and, possibly, with the use of converting cordless phones, amateurs will start to use new frequencies.

Since the 60's, more and more amateurs have been using commercially built equipment rather than building their own. Why? Its obvious to me that the commerical guy's can design and build it better than we/I. That is nothing to be ashamed of. We can still control what goes over the airwaves, be it cw or ssb or packet or ??.

Rather than putting down the commercial infusion of equipment into the amateur radio bands, why not welcome it and use it to help expand

our abilities to add more bands and modes to 'your', personal,
spectrum use.

Just to help clarity things a bit more. I have seem many ads in
magazines, like radio shack etc, for scanners. I have admired them
etc.

I am interested in these circuit board radio, in particular the ones
that other, seemingly, the entire spectrum, 500khz to 1.5ghz, as they
take advantage of both computer technology and rf technology. I
figure that if the company does not have to invest in the hardware
they might put that savings either in a reduced price tag or in better
control software, etc.

I would like to be able to listen to the amateur bands, 6 meters, 220
mhz, 1.2 ghz, 902 mhz etc, without having to buy a different,
expensive, radio for each.

Given the interest in SETI recently seen here on acc-list, and also on rec.radio.amateur.misc newsgroup, following is a list of some SETI related sites on internet that you may find of interest. This list is not comprehensive, and because of my second life as a amateur radio (ham) operator, it contains mostly radio (not visual or infrared) SETI emphasis.

Enjoy.

Hi Neil
Congratulations on trying to learn the code.
When I was learning the code, I considered it to be part of amateur
radio. The first month, or so, on the air was quite difficult for me,
with most cw being faster than I could comfortably copy.
After I had been on a few months my code speed increased to where I
was getting greater percentages of the conversations. I found, for me
at least, that the faster I was able to copy, 15 to 20 wpm, the more
interesting the qsos became.
Later, when I got my canadian advanced and was able to use hf voice, I
found that cw was still a more interesting mode to use than voice.
That, of course, is just personal perference. But, please give cw at
least a year or two to grow on you before you decide that you don't
like it.
As with learning any new language, it takes time to develope any
proficiency of use before you find it second nature to use.

If HR-2369 comes to pass, it will *technically* mean that, essentially, Sony's days of selling Walkmans WILL be numbered IF we don't fight this thing!!! I say do EVERYTHING we can to KILL this bill BEFORE it reaches the President's desk because if we don't, we'll have to rely SOLELY on the President to make our voice be heard!!!!

Just my opinion..... :-)

4022. My 170000 byte post

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-10 00:00:00 UTC
From: patcook@dimensional.com
Message-ID: <MPG.e80e5a5c8757aae989693@news.dimensional.com>
Source record: 190527

Hi everyone:

I just want to apologize in advance for the three part 170000 byte post I made regarding the letter I wrote to my congressional representatives. What I was *trying* to do was to extract ONE message from my outbox (that one message being my letter) and post that. It was NEVER my intent to post EVERY SINGLE email message I sent to the whole newsgroup.

I was tempted to just cancel the whole thing, but I knew that many newsreaders will refer people to what I was intending to post and that people can just simply delete everything else.

That's *IF* these posts even make ANY newsfeed AT ALL....

Once again, please accept my most humble apologies as I will try to do better next time. 73's for now my friends!! :-)

Sincerely,

Patrick Cook, KB0OXD

> So what? I don't need code? Too many other avenues to travel with alot
> less pot-holes!

Which ia all the more reason why I think HF voice will soon join these ranks as digital communications is becoming more and more reliable that soon it will become reliable even under the most strenuous of circumstances such as emergencies, and as that becomes more of a reality, we hams will be "pushed aside" and treated like any other citizen in the area.

In other words, Ham Radio's days of emergency communications *could be* numbered IF the ARRL doesn't start easing up on the restrictions it has asked the FCC to place on us no-coders regarding HF, but yet, they turn right around and do an about-face by saying that we can use satellites and all-mode (minus CW of course) VHF, UHF, and Microwave communications.

Why heck!!! With a setup like that, WHY would ANY no-coder want to bother with listening and fighting the cry babies that permeate 20, 75, and 80 Meters when we ALREADY have the world as our oyster????

The only "incentive" *I* can think of is the ability to use all-mode HF, and to get access to bands like 12, 15, 30, 40, and 160 Meters as well as the bands and modes which we already have under the present no-code licence structure.

This is the *VERY* reason why *I* think a CODELESS HF LICENSE should be created or we no-coders should get all privleges (minus CW) that other generals and up are given PROVIDED THE CANDIDATE PASSES THE _WRITTEN_ ELEMENTS!!!!!!

In fact, why not just "grandfather" technicians into the tech plus category as well since we had to pass BOTH the Novice AND written elements just to get on the air, or just give us Novice priveges on all bands (except CW) that current novices and tech plus' have???

What does everyone else think about this idea???? Let's hear some input (both pro and con)!!!

Hi Mikie,

It's really too bad you are so nasty to those with whom you disagree. As I sit here looking at my copy of a Tek 465 manual (pn 070-1738-01) I can't help but think should I help this guy. He is always so mean spirited does he really deserve to be helped? Perhaps not but not giving you a hand would bring me down to the level the rabid procode folks usually inhabit.

Sent me an email with your address or let me know if you are good in the call book and I'll put it in the Priority Mail tomorrow. I would like it back when you are through. See Mike those of us who don't believe in fast code testing are not so bad.

Even better, get that device that looks like a cassette tape with audio input (like the ones that they advertise for cd players to play through your car stereo), also get a mono to stereo adapter from radio shack and plug it in your car stereo. You'll enjoy full, rich, loud sound. Also before you turn the FT8000R on, adjust both volume to low. If you only want to hear VHF just turn the UHF volume to zero or vice versa. Also you will hear both VHF and UHF through your car speakers.
Hope that helped.

H I H I W A R N I N G

O F F I C I A L K 1 O I K N O T I C E

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text

you can say "ha ha" and of course on voice you would sound like an idiot

if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

What's even *worse* is the TRULY amateurish (Yikes!! I can't even
believe I used that word) jibberish on 11 Meters AS WELL AS 20, 75,
and 80 Meters.

Maybe because most of your binary post never made it across many newsfeeds (Mine unfortnately EXCLUDED).

> Anyone interested in trying the program can e-mail me at kb8ee@netexp.net
> and I will gladly e-mail you a copy of the program.

Then this is what you should've said. I don't mind downloading this as I can decode this with my eyes. I don't need the decoder that comes with my newsreader (which is Anawave's Gravity, BTW). But in rereading your original post, not even Gravity's decoder could decode your binary jibberish.

Anyway, I think enough has been said and I consider this a dead issue.

Azden left selling amateur radio in North America. The market isn't large enough for the headaches involved to produce a sizable return, yet Azden had to advertise and show the radios. The Azden line will continue to be sold and shown in Europe and Japan, which perhaps is an indication that R&D wasn't the chief problem.

From: wb5tdz@aol.com
Message-ID: <19970910004001.UAA07546@ladder02.news.aol.com>
Source record: 190618

Radio Shack was originally a great Ham source for components, if a ham used it once a year, it was stocked -- alas, no more. The people that work in the stores (at least locally) don't know a PL259 from a light bulb. They are only interested in selling cellular phones, computors or stereo systems.

I recently required six male DC plugs that I had purchased at Radio Shack 5 years ago. Two different stores said that they had never stocked such a connector.

I happened to be talking to a former Radio Shack employee and he told me that Allied Electronics had purchased, or at least stocked many of the components previously available from R/S.

It so happens that Allied have a warehouse (store) between my office and home so I stopped, showed them a female connector that I needed the male plug for and within minutes I walked out of the store with the exact plug that I needed.

The salesman's name was Steve Hill, and I have never been treated better by any counter man. Incidentally, hiE-Mail address is: Steve.Hill@allied.avnet.com

Allied stocks anything that people working with electronics can possibly want. It may sound like I am a salesman for Allied, but other than as satisfied customer, I just wanted to pass on that Allied treated me great. They have a catalog about three inches thick (which is free) that covers the full spectrum.

The Web site address is: http://www.allied.avnet.com

This address provides technical information as well as the ability to check stock availability and order components.

If you neeed any component, give them a try -- I am more than satisfied.

Drew, the school has an obligation to protect the children attending
class there. As a parent, I demand this protection. Any normal person
should understand and respect their position. Sounds like they are not
forcing you off the property, they are just trying their best to keep
the kids safe. Your taxes pay for the schools, the teachers, and
protection for the kids.

If this bothers you, find other places to "power walk". There are plenty of streets that your taxes paid for where you can walk. At least that's what I do.

As a service to the Usenet community, Richard Depew runs a program
that searches and cancels binaries posted to discussion groups. His
(correct) justification is that binaries don't belong in discussion
groups (that's usually stated in a group's FAQ/charter).

In any regard, thanks for sharing your IDer program with us.

International World wide Naval contest
20.12.1997 16.00 UTC to 21.12.1997 16.00 UTC

DATE/TIME at 16.00 UTC on the 20th December 1997 to
16.00 UTC on the 21 th december 1997

Naval Stations:
AX ANARS-Australian Naval Amateur Radio Society
FN FNARS-Finnish Navy Amateur Radio Society
IN INORC-Italian Navy old Rhythmers Club
MA MARAC-Marine Radio Amateur Club Netherlands
MF MF-Vereinigung noch funkende Marinefunker e.V.
RN RNARS-Royal Naval Amateur Radio Society
YO YOMARC-Romanian Marine Amateur Radio Club

Bands:
3,5 Mhz 7Mhz 14Mhz 21Mhz 28Mhz
CW 3510-3570 7010-7040 14025-14070 21025-21070 28025-28070 Khz
SSB 3700-3750 7050-7100 14150-14250 21200-21300 28500-28950 Khz

Exchange:
RST and Naval Number (Example: 599/FN 100). Only one number can be used
through the contest. Non members give a serial number starting with 001.

Scoring :
10 Points per Naval Number, 1 point non member.

Multiplier:
Total number of Naval Club members worked. (Station can only be counted
ONCE altough worked more times).

Total:
Total points multiplied by number of Naval Stations worked.

Classes:
Class A = All Band Mixed Mode
Class B = All Band CW
Class C = All Band SSB
Class D = All Band Mixed Mode SWL
Class E = Naval Club Station
Class F = Non Naval Station

Awards:
First three in each class from each Naval Society plus first three Non
Naval Stations.

Sponsor:
FNARS- Finnish Navy Amateur Radio Society.

Logs:
Separate logs for each band. Please submitted by 31 january 1998.

Bleep wrong machine guns are not illeagal. Machine guns are regulated
registered and heavily taxed but they are not illeagal on the Federal
level. Some repressive states like say, New Jersey and/or New York have
made machine guns illeagal but states like the one I live in respect
their citizens and allow them to own what they want. If you live in a
"People's Republic" that is your personal problem the rest of us are
just more free. But this has nothing to do with radio or scanning.

An absence of spam. More signal than noise in terms of content. No
stupid "mee too" postings. What people of my generaton get hung up
over is the preception that digital (internet) is "wired" and analog
is "tired".

4052. Need audio SQUELCH &/or filter

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-10 00:00:00 UTC
From: stewl@sprynet.com
Message-ID: <5v562e$fv2$2@juliana.sprynet.com>
Source record: 190631

Can anyone provide a schematic for an audio SQUELCH function?
I'd also like to build or buy a used audio notch/peak filter.
Thanks
Stew Lindenberger

Hi Kevin,
I wish I was a designer, but alas, I'm only a builder. There is decades
of literature available to you containing well-designed equipment, though.
Look to your closest university library (our library even has QSTs going
back to 1960).

I'm sure you're right since I got mine back in 93 or so, the year we went to the new color (in fact, mine were the only ones in the new color I saw for a long time). You can tell my wife keeps the checkbook in the family.

See you on VHF over the weekend.

Ham radio provides a unique experience.

It's sometimes reliable, sometimes not.

Who will answer your CQ?

And from where?

Can you build a computer from scratch with just discrete components, and have it run Windows NT?

I can't, even with lots of practical experience with electronics and two EE degrees.

They say computers and the Internet are killing radio.

Funny, we wouldn't be HAVING these discussions ABOUT RADIO if it werent for computers and the Internet.

Remember when you first saw the computer? It was like nothing you'd ever seen before. Flashback...

Take a 10 year old kid - who has NEVER listened to a shortwave broadcast of the BBC World Service, and never heard two people yakking away via HF radio, or satellite, or whatever, from opposite ends of the globe.

It's "NEW!" It's "COOL!"

Assume that if YOU don't show them, nobody will.

Make it your duty to show others what you enjoy so much, so that they'll have a chance to as well - and thus help you preserve what you hold so dear.

For 2 SSB the calling freq. is 144.200, but mostly everyone spreads out
from 144.100 to about 144.275. Tune around; you'll find a lot of hams
out there. Some of the big group stations like W2SZ/1 are below 144.200

The VE2OKL rover station will be activated for the first time during
the upcoming ARRL September 1997 VHF QSO Party next September 13 & 14.
The 850 miles plus trip will take its operators VE2OKL and VA2EPG
through the following cities and grids:

Montreal QC FN35 Sept 13
Cornwall ON FN25 "
Brockville ON FN24 "
Mary Island NY FN14 "
Watertown NY FN23 "
Syracuse NY FN13 "
Cortland NY FN12 sept 14
Little Meadows PA FN11 "
Binghampton NY FN22 "
Newburgh NY FN21 "
Poughkeepsie NY FN31 "
Albany NY FN32 "
Glen Falls NY FN33 "
Plattsburgh NY FN34 "
Montreal QC FN35 "

We'll be working 2m FM exclusively and monitoring all contest authorized
simplex frequencies. Try to work us, try to follow us through the
various
grids. The only exchange required is your call sign and grid square
location. QSL guaranteed for those rare grids squares...

Well your *probably* looking for other scanner/SW radios but in case
you like listening to the FM broadcast band there's all kinds of FM
radios on a card at the auction web "http://www.ebay.com" I got mine
for $8.00 plus shipping , it's great for listening to the "oldies" on
FM stereo while flaming someone on usenet or hunting down a spammer ;)
..... I have recently seen a AM/FM card but it was about $60.00 ,
AFAIK these 3 cards are the only ones so far.

Jim,

You sound to me to be a complete ASSHOLE. I'm an asshole, too, so I know what to look for.

All of us assholes could all get together [in person] and have a nice little asshole's picnic. Now wouldn't that be fun! Wonder how many of us would be left standing after the first 5 minutes?

We could sort this whole thing out. We could find out just who really is the biggest and badest asshole out there in never-never land.

Will

I am just learning ham now, and am picking up code when I can, I know I
can get more clarity through it and it opens a few doors for me. I think
new hams shouldnt HAVE to learn it, but that it should be covered before
they get full spectrum.

Given the interest in SETI recently seen here on acc-list, and also
on rec.radio.amateur.misc newsgroup, following is a list of some
SETI related sites on internet that you may find of interest. This
list is not comprehensive, and because of my second life as a
amateur radio (ham) operator, it contains mostly radio (not visual
or infrared) SETI emphasis.

Enjoy.

Chris Boone WB5ITT rared up on his hind legs and responded:

>DDDUUUHHH!!! PEOPLE!!! this part of the movie was set in the
>50s!!!

>GUESS what calls were being issued then??????

>Damn are people so dumb nowadays they CANT add numbers???

>Chris
>WB5ITT
>(licensed 1973 and I KNOW a lot of K5s who were licensed
>in their TEENS in the 50 BEFORE I was born)

If the movie was set in the 60's, how is it that Jody Fosters
dad was driving a well-worn 65 Chev convertible? The movie
starts in the early-mid 70's.

According to a scene late in the movie, her father DID put the
stations together to encourage her apparent interest in things
scientific. It is true that "W9xxx" calls were not being issued in
the mid-70's, but historical accuracy was probably not a goal of the
producer. The *real* story behind the use of that call sign is much
more interesting. The following comes from Paul Harden, NA5N.

The call W9GFZ was recommended for use by ham consultants at
the VLA radio observatory at Sorocco, NM, to "honor" Grote Reber,
W9GFZ. The "Z" was changed in the movie to "O" (for reasons unknown).

Grote Reber was an ardent ham who did pioneering radio astronomy work in
the 1930's and 1940's. Radio astronomy was "discovered" by telephone
engineer Karl Jansky in 1932 while trying to find the source of HF
noise... which turned out to be coming from near the constellation
Sagittarius, now known to be the center of our galaxy.

Grote Reber continued this research as an amateur, designing and building the first dish antenna in his back yard, and making the first radio map of the cellestial skies. Grote is now quite elderly and lives in Tasmania.

The CONTACT Director modeled Jodie Foster's role after two very noted early radio astronomers ... Grote Reber (W9GFZ) and John Kraus (W8JK). Both of these men were hams at an early age, and their experience with HF communications enabled them both to realize that some of the signals they heard were NOT man made (i.e., noise/emissions from space). He thus modeled Jodie Foster's role after them ... to be a ham at an early age and her hamming experience would explain why she was the only person to recognize the signals received in CONTACT to be extraterrestrial.

73, de Hans, K0HB/4ID

PS: As another ham radio tie-in, some sharp-eyed viewers may have noted a bunch of books on a shelf in the movie, written by W8JK. Many amateurs will recognize W8JK as an HF antenna guru of the first water, but a few will also recognize him as a professor (of astronomy) at Ohio State "Big Ear", receptor of the famous and still unexplained "WOW" ET signal, who is now a guru with SETI League.

Message-ID: <5v6hgaedf1@artemis.backbone.ou.edu>
Source record: 190655

In keeping with the announcements:

The University of Oklahoma ARC, W5TC, will be operating the Sept.
VHF QSO Party from Norman, OK (EM15), just south of Oklahoma City.

From a height of 150+ feet, we will be running the following bands:

6m: SSB/CW
2m: SSB/CW/FM
1.25m: FM
70cm: FM
33cm: SSB/CW/FM

The FM bands will only be used for in-grid (and EM14) comms. If you're
outside those ranges, look for us on the SSB freqs. We are especially
looking for Qs on 33cm into the OKC, Dallas, Tulsa, and Wichita freqs.
Best to works us on another band and QSY to there.

John

I have a Yaesu FT-8100R and am wanting to use two external
speakers. The documentation says that the speaker jacks are 3.5mm. Is
this the same as a 1/8 inch jack (the same type as one would find on a
walkman radio). I don't have the money for a yaesu external speaker so
I was going to use two radio shack external speakers but they use the
1/8 inch plug. Will this work? Will it sound OK? Has anyone done
this?
Any advice is MOST appreciated!!!

Well at least they stick to certain frequencies. Really only 14.313 days, and 3-4 freqs on 80 nights. Sadly, most are probably general class and higher on the ham bands. 11 meters has 40 frequencies of horse crap.

The three standard sizes of jack plug connector used on ham radio
gear are 2.5mm, 3.5mm and 1/4" and these are also called subminiature,
miniature and standard or full size respectively. I've never heard of
one being called 1/8" before, but I'm sure that it would be the 3.5mm
or miniature size as that is by far the closest to 1/8"

I've never come across the 2.5mm jack plug connector in ham gear
except on HT's where it is used for the speaker output. By using
that smaller size the dual plug, molded with the mike/PTT plug which
is a stereo 3.5mm plug, is polarized and non-reversible. The full
size 1/8" size is common for headphones and morse keys on base rigs.

I just measured a "1/8 inch" connector. It is exactly 3.5 mm in
diameter which is a tiny bit larger than 1/8 inch. It is apparent to me
that the "1/8 inch" designation is just for the benefit of metrically
challenged North Americans.

Use it without fear.

Hi Russell,

The 1/8" and 3.5 mm connectors are not *exactly* the same size, but
they're so close it makes no difference. They are interchangeable.

I've been using the cheap Radio Shack CB extension speakers at home
and in the car for YEARS, and they work great. Never had problems
with them, and never had one go bad. The one in my truck right now
is about 15 years old and still going strong in daily use. Truck
sits out in the weather all the time too (no garage space for the
pickup because I keep my two classic Mustangs in there). Go ahead
and grab the R/S speakers and enjoy the money you save!

The following news story caught my eye.

- - - - - - - - -

Spaniard Alberto Porta has declared himself a country. Porta, who now goes by the name Zush, says he got the idea from a schizophrenic he met in a mental hospital in 1968. "Evrugo Mental State" consists of one inhabitant -- himself -- and he has issued himself a passport so he can move around. Zush has grudgingly adopted a state flag. "I don't need flags and hymns," he says, "but the only way people accept that you have your own state is by using symbols of state. It's purely for diplomatic reasons."

-- From Reuter's news service, 28 April 1996

- - - - - - - - -

Does he count for DXCC?

I doubt that they are different in any way except for dumbing down
the size measurement so as not to excite people in the USA :-)

Good Morning Ladies & Gentlemen,

Please pass this information to all interested parties. You are authorized to copy and retransmitted via any means necessary to get the word out to all operators.

During the USAF 50th Anniversary QSO Party (Sept 20-21 0001z to 2400z), the Strategic Air Command Memorial Amateur Radio Club (SACMARC) will man a Station from the USAF Communications Facility near Elkhorn, Ne. SACMARC will use the call sign K0GRL which was owned by the late General Curtis Lemay, now assigned to SACMARC. QSL's commemorating the special event will be issued by the club. The station will field at least one HF position and run VHF voice and packet from Elkhorn. SACMARC will field an additional station under the callsign K0AIR during the QSO Party. For further information, contact WA6LBU via Email at:

wa6lbu@aol.com

Thank You and hope to work you during the QSO party

Clay Mayrose, WA6LBU

4094. ARLB053 All vanity applications to require Form 159

Newsgroup: rec.radio.amateur.misc
Date: 1997-09-11 00:00:00 UTC
From: w1aw@arrl.org

SB QST @ ARL $ARLB053
ARLB053 All vanity applications to require Form 159

ZCZC AG53
QST de W1AW
ARRL Bulletin 53 ARLB053
From ARRL Headquarters
Newington CT September 11, 1997
To all radio amateurs

SB QST ARL ARLB053
ARLB053 All vanity applications to require Form 159

The ARRL has learned that when the vanity application fee jumps to $50 on Monday, September 15, the FCC also will start requiring everyone filing a paper Form 610V Amateur Station Vanity Call Sign Request to include FCC Form 159, FCC Remittance Advice, with their application--no matter the method of payment. Applications received on or after September 15 and lacking a Form 159 will not be processed and will be returned to the applicant.

Previously, the FCC only required an Form 159 with a hard-copy Form 610V if the applicant was paying with a credit card or money order--or for a single remittance to cover multiple applications.

The change came on very short notice, and the FCC has yet to issue a formal public notice to address it. But the FCC appears ready to stand firm on the requirement starting September 15. A spokesperson at the FCC in Gettysburg said that on or after September 15, Mellon Bank--the FCC's fiscal agent--will not cash or deposit any fees which are not accompanied by a Form 159. Applications received at Mellon Bank that lack a Form 159 will be forwarded to Gettysburg for handling (the fee will not be deposited), and Gettysburg will return the entire application and the fee to the applicant with a blank Form 159 and instructions to refile.

When completing Form 159, all applicants must include a taxpayer ID number (your Social Security number) in Item 1 (FCC Account Number). In Items 14A and 14 B, Payment Type Code, applicants should write ''WAVR.''

FCC Form 159 can be obtained by writing ARRL/VEC, 225 Main St, Newington, CT 06111. An SASE is appreciated. Form 159 also is available from the FCC via the Internet at http://www.fcc.gov/formpage.html or ftp://ftp.fcc.gov/pub/Forms/Form159/.

You can also get the form by return fax by calling 202-418-0177 and requesting Form 000159. The FCC Forms Distribution Center also accepts orders at 800-418-3676.

If you need assistance completing Form 159 or need filing information contact the FCC National Call Center at 888-225-5322.

The FCC still has given no indication of when it will begin processing Gate 3 vanity call sign applications. It's estimated that more than 1000 applicants filed on the opening day, August 6. The FCC also has not said when it plans to open vanity Gate 4.

Greetings,

Below is the URL for a little app named "Beacon Wizard".

Beacon Wizard helps id the new IARU/NCDXF beacons. The new
system is really useful and fun.

Beacon Wizard displays the following information:

o Active beacon
o Distance between your location and beacon
o SPath & LPath Azimith
o Local beacon time
o Sunrise/Sunset UTC time at beacon
o Users local UTC Sunrise/Sunset time
o Gray line flag between beacon and user

Beacon Wizard also has the following features:

o Run on Windows 3.1 and above
o User can edit beacon file to update as needed
o Bring up Windows clock from Beacon Wizard
o Info tip hot spots on display

Please help yourself to this freeware applet from the Wizard URL
below my signature. You will also find KCal and a DXCC list in WinHelp
format.

Thanks & 73,
Jim - KU5S

I did not post this, notice the difference in the From: line.

I realized there must have been something in this group, because of all the "caring" letters I began receiving. I don't post to rec.amateur groups at all, and didn't this post either (well of course THIS post). I cannot apologize for the acts of others, but I wanted to set the record straight.

The CB Guy

MIDLAND TRANSCIEVERS FOR SALE

I have 2 Midland Syntech mobiles. A 70-066 70mhz
50 watt link radio. Also a 70-052 85 watt low
band. The radios are not in a link configuration.
The 70mhz is coupled to the 47mhz so that they it
transmits via a local 70mhz radio. These units
were on a mountain top and used as a remote base.
Both units are very clean. They were used in an
enclosure, so have no scratches/marks. They are
with an Astron 35A supply and an interface for the
linking controls. If interested, contact me by
email. Have a great day!

Hmmmm, he must be looking in the mirror again.......

It's SO NICE to see that one person can catagorize all people from a hobby into one. Geez, there ought to be one NICE ham out there..... Don't you think? One that he WOULDN'T call a name? Maybe one day, one of his own flesh and blood will become one. Then WHAT?

I am a ham and damned proud of it. And before you go stroking your lips, I am a ex CBer as well. I don't go putting them down as some of my friends are into CB. They do their thing, I do mine. No big deal......
Why don't you do your thing and mind your own business and let everyone else do theirs. Maybe, if people like you can't stop calling other people names because you don't happen to like what they do or stand for, then you had better take another look in the mirror at your own miserable life.

Name calling is such a waste of time, effort and space not only in cyberspace but on the airwaves as well.

I don't put myself above anyone else, and I'd strongly suggest you quit it yourself. You and I are NO BETTER than anyone else. We're all human. When we die, we all become NOTHING, once again. Enjoy your short miserable life. Try to get along instead of putting others down.

Did I Contradict myself in the first line, Hmmmmm, maybe, but when you go calling others names, ESPECIALLY those you don't know, you need to look at your own self. How do people perceive YOU???????

Just my opinion... Oh and before you retort to this line, I KNOW opinions are like A$$ (:)'s, everybody has one. This one just happens to be mine.

Lou

Tech@DP.NET

P.S. A lot of Handicapped people are hams and that is THEIR ONLY way of talking to ANYONE. You have got to be one miserable person to put down people who are in a predicament through no fault of their own.

Someday, you may be worse off, then MAYBE you might stop and think about the things you now say.

If you had an argument with one Ham operator, that's between you and him, don't bring the rest of the ham population into it. It's no better than

if WE blamed ALL CBers or Computer operators in which case WE ALL (on here), would be in that line up, for our problems in society. And I for one, DON'T.

SB PROP ARL ARLP037
ARLP037 Propagation de K7VVV

The rise in solar activity continues, and this past week on Monday solar flux values peaked at 119.4. The last time the solar flux was above this value was January 27, 1994. On the same Monday the sunspot number was 101, which has been unequaled since September 3, 1994. We are definitely through the minimum and on the upswing of the next solar cycle.

The average solar flux for the previous 90 days rose another two points this past week (to 77), as it had the previous week. September 11 was the 38th consecutive day that the flux was above the 90 day average. Along with this greatly increased activity has been some geomagnetic disturbances. The most disturbed period over this past week was around 0600 to 0900 UTC on September 9.

Recent projections from the NOAA Space Environment Service Center show the solar flux dropping below 100 after September 17, then back above 100 around September 26, and above 115 after October 4. These estimates are based upon the previous solar rotation, so new active regions on the Sun could send these numbers higher. This new activity means that long distance propagation is now possible on the upper HF bands, where prior to this 20 meters was the primary band for worldwide propagation.

Check 15 and even 10 meters, where openings are now possible, especially over north to south paths. Combined with the progression toward the Fall equinox, conditions now and over the next month should be the best seen in several years.

Sunspot Numbers for September 4 through 10 were 56, 79, 85, 84, 97, 101 and 95 with a mean of 85.3. 10.7 cm flux was 93, 96, 97.6, 102, 119.4, 116.1 and 114.9, with a mean of 105.6, and estimated planetary A indices were 19, 5, 7, 3, 9, 19, and 19, with a mean of

11.6.

tbryant@cannet.com (T.L. Bryant) writes:
>Photography is an art form. Part 97.1(b) mentions radio as an art. There is no
>difference. Things can be done with light and shadow in B&W photography that
>just don't have the same effect as when they're done in color.
>
>Maybe the anti-code crowd can take a hint at this, but then again...

Yes, this *is* a good analogy. B&W photography is still alive and
well and very much being practiced, even though it is no longer
"mainstream". And it now takes a higher level of technical skill to
work in B&W than colour (unless you are willing to pay for "professional"
processing) because you now have to do your own B&W processing, while
the corner store only does colour. Still, B&W shows absolutely no sign of
dying out completely.

But no one suggests that a photographer needs to be proficient in B&W
before they are allowed to work in colour, even among professional
photographers. Those that want to use B&W do, and those that don't don't.

Maybe the pro-code-test crowd can take a hint from this...

To all radio amateurs

SB QST ARL ARLB054
ARLB054 IARU Region 3 conference concludes in Beijing

Representatives of Amateur Radio organizations in 20 Asia-Pacific countries have spent the past week reviewing proposals and papers submitted by member societies at the 10th Regional Conference of IARU Region 3 in Beijing, the People's Republic of China. The Chinese Radio Sports Association (CRSA) hosted the week-long conference, which just wrapped up. Representatives of the ARRL also were on hand for the event, September 8-12.

Only a fortunate few in North America were able to hear--or even work--special event station BT1IARU, the on-air emblem of the Region 3 gathering. Although conditions were not favorable to this part of the world, the station made many QSOs elsewhere. Things also went well at the conference itself.

The conference's three working groups developed recommendations for consideration by the full conference. Recommendations adopted by the conference dealt with subjects as diverse as preparations for future ITU World Radiocommunication Conferences, strategic planning for the regional organization, electromagnetic compatibility issues, the IARU monitoring system, beacons, Amateur Radio direction finding, and many others.

Among conference highlights was the participation of representatives of the Vietnam Amateur Radio Club, which hopes to join the IARU.

David Rankin, 9V1RH, retired as a director after 24 years of service as Regional Secretary and Director, half of that time as Chairman of Directors. The other incumbent directors, HL1IFM, JJ1OEY, ZL2AMJ, and 9M2SS were re-elected. Former Director David A. Wardlaw, VK3ADW, was returned to office. Keigo Komuro, JA1KAB, was re-elected as Regional Secretary. Fred Johnson, ZL2AMJ, continues as Chairman of Directors.

The more than 100 conference attendees complimented the CRSA for the arrangements, which included excellent logistical support of the conference plus a visit to the Great Wall and the Summer Palace in Beijing.

Representing the ARRL at the Beijing conference were ARRL President Rod Stafford, KB6ZV, assisted by First Vice President Steve Mendelsohn, W2ML, and staff members David Sumner, K1ZZ, Paul Rinaldo, W4RI, and Naoki Akiyama, NX1L. International Affairs Vice President Larry Price, W4RA, attended in his capacity as IARU Secretary.

The next IARU Region 3 conference will be held in Australia in 2000.

Actually, high tech is usually *cheaper* than lower tech for the
same level of functionality. We see this constantly all around us.
We do things today for pennies that would have taken racks of
equipment costing thousands of dollars a few years ago, if we
could do them at all. Each generation of technology has become
much more functional while becoming much cheaper in constant
purchasing power as it has become increasingly high tech.

X-Mailer: Microsoft Exchange Server Internet Mail Connector Version 4.0.994.63
Encoding: 31 TEXT

Dear Mr. Cook:

Thank you for contacting me to express your opposition to H.R 2369, the
Wireless Privacy Enhancement Act. I appreciate learning your views on
this issue.

Like you, I would not want to see legislation implemented that unduly
burdens thousands of shortwave radio enthusiasts across America. While
this bill is well intended, it does raise some concerns as to who will
be affected by its scope. A HAM operator who accidentally comes across
a private conversation on his radio should not necessarily be subject to
criminal prosecution. I am also worried that the simple act of selling
HAM operator equipment could be construed as a criminal act.

As you may know, this bill has been referred to the House Commerce
Committee of which I am a member. I look forward to discussing this
bill with the rest of the Committee, and hopefully finding a way to
address the concerns you have raised. Please be assured that as I
consider this legislation, I will keep your interests in mind.

Thank you for taking the time to share your thoughts with me. Please
feel free to contact me again about this or any other issue that
concerns you. I also look forward to meeting with you at one of my

"storefront speakouts" that you mentioned in your letter.

Sincerely,

Diana DeGette
Member of Congress

Sometimes that is the most economical thing for the manufacturer to suggest.
Even in Japan, labor costs can easily outstrip component costs ...

> payment into Jenny's college fund, and paying the rest of the bills.

Where do you get your numbers on the "typical household income"?? From
1970-something or what???

Once again the poor-mouth approach (typical liberalism at its worst) ...
where the "poor-mouther" whines about how the "disadvantaged" have
such a poor lot in life and those who have worked and earned something
better are somehow "morally deficient" for their relatively better situation.

I reiterate, those of us with modern technical skills and talents *have* the ability to earn salaries that permit some degree of personal "goodies" ...

I was educated in the public schools, not in some fancy, expensive private school ... hundreds of thousands, no millions, of other Americans had the same educational opportunities I had ... many had better opportunities because their parents were financially more able than mine, my Dad was a carpenter who worked in a steel mill ... he also died at 45 when I was 18, which made the financial situation even less favorable vis a vis expensive colleges ...

Still I have made a successful, respected career in the technical field, working
in the course of that career over the past 25+ years at several of the world's leading research organizations (not to boast, just to illustrate that one CAN succeed and have the ability to have things like some ham gear, test equipment, or whatever ... IF one works for it)

> If you're more well-off financially than the average person, more power

> to be a doctor, lawyer, or engineer, and subsequently doesn't have the
> same earning power, the sooner you might be able to develop some
> understanding of why things aren't the way you think they are.

If more people stopped buying into the liberal view that insists (and *wants*) there to be a large body of undereducated, underemployed, economically disadvantaged folks (to constitute the liberal's political constituency, since the liberal controls them by keeping them down and making them dependent on financial support from the government ... by stealing the $ from those of us who work for it to give it for those who don't, of course), there wouldn't BE
such a body ...

It's time for those who are below par in terms of employment skills to either work to gain better skills or get the hell out of the pocket-books of those of us who already have ... I'm damned sick of their expecting ... and getting ... a handout at my expense ...

> I love the work I do.

It doesn't usually sound like it in you posts ...

> I also have two children, and love them more than work.

That is good ... in fact, it's THE most human and decent thing I've yet to "hear" you say ...

> Unfortunately, at the present time, its necessary for me to make a sacrifice
> and spend less time with them in exchange for providing a secure financial
> future. After putting in a 10-hour day, I prefer to spend some time with
> my kids before they run off to bed.

That's fine, too ... but after the kids are in bed you could crack open a book and learn a bit more about how radio works ... if you were interested. (However, your comments to date indicate a UPS packing and shipping

manual would be more in line with your level of interest in radio ...)

> In your case, Carl, either you don't have kids, or they're grown and have
> lives of their own -- I don't know which.

3 - youngest is in Navy boot camp right now, one lives in Utah, the other
in California ...

> If I didn't have kids, I would
> be looking for other things to occupy my time, and maybe I would spend
> more time applying what I do at work to amateur radio. Maybe in 20 years
> I'll know.

Take some advice from one who found out the hard way through the death
of a wife ... don't sacrifice all of today with some "golden age of retirement"
fantasy in mind ... it may never arrive ... I am not suggesting that you should
in *any* way neglect your kids, but rather that you try to find a way to do
some
things for YOU now, too ... just in case ...

> I work with a dozen different radio techs, none of whom have amateur

> go home I want to do something else" (I haven't had one complain about
> the morse requirement keeping them out.

Most unusual ... in 25 years, I've never seen a shop with that many techs
where nobody was a ham ...
WRT the code ... maybe they are aware of your feelings about the code
and don't want to offend you by admitting that it is of ZERO interest to
them ...

> Well, good for you. My hobbies include long-distance precision
sharp-shooting,

Same scope, except I don't have the wedge ...

> Amateur radio fits in there too.

It would appear that it's rather far down your list, while it's at the top
on mine ... if I had to give up any subset of the hobby interests, ham
radio would be the last to go ...

> I don't like sailing, so I

> once were.

I said "there are there are about a half a dozen major problems that can
easily
be identified by anyone with any sense ... Solve them and 99% of ham radio's
problems will be gone ... the remainder are trivial ..." I didn't say anything
about
why people are "not as active today as they once were" ... I don't even
necessarily
believe that that's the case ... they are far less *competent* and technically
oriented, relative to today's technology, than our forefathers were relative to
the
SOTA of their day ... that is a large part of my point when I say that ham
radio
has been perverted into something other than what it was/is intended to be ...

> >Actually, if you knew how to apply your coding skill to amateur radio
> >applications, you might be quite useful ... if you're as good as you seem
> >to think you are ... but you don't like what you do enough for that,
right???
>
> Even worse: I'm better than you think I might potentially be.

If that is true, then it is our loss ... and THAT is one of the major problems
facing ham radio ... that not enough technically competent people are
getting active in ham radio and contributing advancements ... you say you're
too busy with your kids and other interests, tens of thousands are unwilling
to waste months of boring Pavlovian conditioning to learn an encoding scheme
that they have no intention of ever learning ... I think your kids are
important,
but maintaining the Morse "tradition" as a government mandate is of absolutely
ZERO value ... if Morse is, in fact, useful, or even just fun, some folks
probably
never more than the current 27% of HF licensed hams who "regularly" use Morse
will continue to learn and use it voluntarily for those personal reasons ...
not one
pro-coder has ever posed a logical reason why that should not be sufficient ...

> Apply my skills to amateur radio? No, I don't think so. I put in my 10
> hours, and I'd prefer to spend an hour or two at night taking my 'scope
> out and teaching my kids earth sciences and astronomy rather than sitting
> in my 'shack writing DSP firmware.

So, again it seems that ham radio is relatively low on your list of priorities
.. so
why fight so hard to keep the code??? If ham radio were not at the top of my
list of avocational priorities, I wouldn't fight so hard to eliminate code
testing for
the benefit and future survival of the service I love so much ... I'd just say
"to hell
with it, take the scope outside, go to the movies with the XYL, or something
else.

> >A certain amount of technology is necessary to build, field, and maintain
> >the radio systems necessary to provide public service communications
> >(just the technical and learning part is ALSO very valuable to society ...)
>
> Of course, nobody denies this.
'
You do when you rant about eliminating the theory tests, about how
UPS skills are more important, etc. ... You have rather consistently
attempted to deny virtually *any* value in the technical side of ham
radio ...

> >However, you are right about needing to learn how to communicate ...
> >but knowing Morse code does not contribute to that skill one iota ...
>
> Funny, but I don't see the words "morse code" in my message at all.

Give us a break, Mike ... that's been the major subject of argument
between us since the first day we "met" on the net ...

> >as someone said the other day, it is just as easy (probably easier)

>
> I would say that you are an exception to the rule, then, Carl.

The entire group that I was affiliated with in SoCal was that way ... that
was the purpose of the group and why we built a multi-band, multimountaintop

repeater system and system of digital nodes covering about the lower 1/3 of
the state of California ...

> >We also won't get their help if they perceive us as a bunch of backward,
stuck
> >in the past, olde fartz who still think Morse code is "the bee's knees" ...
>
> If Mike Tyson, a convicted rapist, can make a popular return to Boxing,
> I would submit to you that even if what you claim above is a problem (which
> I don't think it is), it wouldn't make a difference with proper P.R.

Boxing fans could care less about Tyson's sex life (or lack thereof) ... hell
most people don't even care if Clinton cheated on Hillary or was a pervert
with state employees while governor of Arkansas ... but they DO understand
the existence of modern cellphones, cordless phones, satellites, etc. and
rightfully view Morse code as a relic from the old west ... or WWII at the
most modern ... that hurts US ...

I would like to know if anybody knows of a source of amateur radio
related software (esp. logging software) for the apple //c computer.
Thanks, Dave
